Meeting Agenda

Northeast Regional Planning Body Meeting

Date January 22-23, 2014

Location Hyatt Regency Cambridge, President's Ballroom D (lobby level)
Cambridge, Massachusetts

Meeting Agenda

Meeting Objectives

- Provide updates on Northeast Regional Planning Body (NE RPB) activities since the last in-person meeting.
- Review the Draft Northeast Regional Ocean Planning Framework and Workplan and:
 - Reflect on public input provided to date
 - Identify refinements and approve the principles, goals, and objectives
 - Identify refinements and next steps for draft actions that would be implemented to achieve the goals and objectives
- Provide opportunities for public input about the topics being considered by the RPB and informal discussion of ideas with RPB members.

Wednesday, January 22, 2014

9:15 am **Public Registration**

10:00 am **Tribal Blessing**
Richard Getchell, Aroostock Band of Micmac Indians

10:05 am **Welcome to Massachusetts**

10:20 am **Introductions and Agenda Review**
Laura Cantral, Meridian Institute

10:30 am **Opening Remarks and Overview of RPB Progress**

- *Grover Fugate, Rhode Island Coastal Resource Management Council; NE RPB State Co-Lead*
- *Richard Getchell, Aroostock Band of Micmac Indians; NE RPB Tribal Co-Lead*
- *Betsy Nicholson, National Oceanic and Atmospheric Administration; NE RPB Federal Co-Lead*

RPB Co-Leads will provide brief opening remarks, present important updates about progress since the last public RPB meeting and review the RPB timeline.

11:30 am Summary of State-Led Approaches to Stakeholder Engagement and Input Gathered to Date

- *Kathleen Leyden/Meredith Mendelson, State of Maine*
- *Thomas Burack/Glenn Normandeau, State of New Hampshire*
- *Bruce Carlisle/Paul Diodati, Commonwealth of Massachusetts*
- *Grover Fugate/Janet Coit, State of Rhode Island*
- *Brian Thompson/Susan Whalen, State of Connecticut*

During this session, state RPB members will describe their approaches to state-based stakeholder meetings convened in the fall/winter, share reflections about key themes heard in their states, and note that input gathered during state-based stakeholder meetings is captured in briefing packet materials, including a summary of stakeholder input and the draft Northeast Regional Ocean Planning Framework and Workplan. This will be followed by RPB discussion.

12:15 pm Lunch

1:15 pm Presentation of Draft Northeast Regional Ocean Planning Framework and Workplan

During this session, RPB Co-Leads and staff will present the Draft Northeast Regional Ocean Planning Framework and Workplan, review the process to date for development of key elements of the document, and highlight how the document has been informed by public input. This will be followed by brief clarifying questions from the RPB.

2:00 pm RPB Discussion of Draft Regional Ocean Planning Framework and Workplan: *Effective Decision Making*

During this session, the RPB will begin discussion about the goal, objectives, and actions related to *Effective Decision Making*. The RPB will then pause its discussion and turn to the public for comment at 2:30 pm, before resuming its discussion at 3:45 pm informed by public input.

2:30 pm Public Comment About Draft Northeast Regional Ocean Planning Framework and Workplan: *Effective Decision Making*

Interested individuals will be provided the opportunity to offer formal public comment and encouraged to provide input on the draft Northeast Regional Ocean

Planning Framework and Workplan, focusing in this session on the goal, objectives and actions related to *Effective Decision Making*. In the interest of accommodating as many members of the public as possible, the RPB will hold discussion of comments and questions until the following session.

Depending on how many individuals would like to comment, the time limit will be between 2-3 minutes. A sign-up list and instructions will be available at the meeting registration table.

3:30 pm Break

3:45 pm RPB Discussion of Draft Regional Ocean Planning Framework and Workplan: *Effective Decision Making* (continued)

After hearing public comment, the RPB will resume its discussion of the draft Northeast Regional Ocean Planning Framework and Workplan, focusing on refinements needed to the goal, objectives, and actions related to *Effective Decision Making*. The objective of this session is to:

- Reflect on public input provided to date
- Identify refinements and approve the goal and objectives related to *Effective Decision Making*
- Identify refinements and next steps for draft actions that will be implemented to achieve the goal and objectives

4:30 pm Update on Activities Related to Offshore Wind Energy Development and Discussion about Relationship with Regional Ocean Planning

During this session, representatives from the U.S. Department of Energy, the Bureau of Ocean Energy Management and the RPB will provide an update on recent and upcoming activity related to development of offshore wind energy in New England. This will be followed by RPB discussion of opportunities for the RPB to inform and coordinate with these activities and demonstrate how ocean planning can lead to improved governance of ocean space and resources.

5:55 pm Summary and Adjourn
Laura Cantral, Meridian Institute

6:00 pm Adjourn

6:15 pm – Networking Reception

7:30 pm Location: Empress Ballroom (14th floor)

The public will be invited to join RPB Members for a cash bar networking reception. This will provide an informal opportunity for the public to interact with the RPB and share any ideas or reactions in an informal setting.

Thursday, January 23, 2014

8:30 am Public Registration

9:00 am Welcome Back, Review of Day One Outcomes and Review of Day Two Agenda
Laura Cantral, Meridian Institute

9:15 pm RPB Discussion of Draft Regional Ocean Planning Framework and Workplan:
Healthy Ocean and Coastal Ecosystems

The RPB will resume discussion of the draft Northeast Regional Ocean Planning Framework and Workplan, focusing on the goal, objectives, and actions related to *Healthy Ocean and Coastal Ecosystems*. The RPB will then pause its discussion and turn to the public for comment at 9:45 am, before resuming its discussion at 11:00 am informed by public input.

9:45 am Public Comment About Draft Northeast Regional Ocean Planning Framework and Workplan: *Healthy Ocean and Coastal Ecosystems*

Interested individuals will be provided the opportunity to offer formal public comment and encouraged to provide input on the goal, objectives, and actions related to *Healthy Ocean and Coastal Ecosystems*. In the interest of accommodating as many members of the public as possible, the RPB will hold discussion of comments and questions until the following session.

Depending on how many individuals would like to comment, the time limit will be between 2-3 minutes. A sign-up list and instructions will be available at the meeting registration table.

10:45 am Break

11:00 am RPB Discussion of Draft Regional Ocean Planning Framework and Workplan:
Healthy Ocean and Coastal Ecosystems (continued)

After hearing public comment, the RPB will resume its discussion and identify key refinements needed to the goal, objectives, and actions related to *Healthy Ocean and Coastal Ecosystems*. The objective of this session is to:

- Reflect on public input provided to date
- Identify refinements and approve the goal and objectives related to *Healthy Ocean and Coastal Ecosystems*
- Identify refinements and next steps for draft actions that will be implemented to achieve the goal and objectives

12:00 pm **Lunch**

1:00 pm **RPB Discussion of Draft Regional Ocean Planning Framework and Workplan: *Compatibility Among Past, Current, and Future Ocean Uses***

The RPB will resume discussion of the Draft Northeast Regional Ocean Planning Framework and Workplan, focusing on the goal, objectives, and actions related to *Compatibility Among Past, Current, and Future Ocean Uses*. The RPB will then pause its discussion and turn to the public for comment at 1:30pm, before resuming its discussion at 2:45pm informed by public input.

1:30 pm **Public Comments About Draft Northeast Regional Ocean Planning Framework and Workplan: Goal, Objectives, and Actions Related to *Compatibility Among Past, Current, and Future Ocean Uses* and Any Other Topics of Interest to the Public**

Interested individuals will be provided the opportunity to offer formal public comment and encouraged to provide input on the goal, objectives, and actions related to *Compatibility Among Past, Current, and Future Ocean Uses*. In the interest of accommodating as many members of the public as possible, the RPB will hold discussion of comments and questions until the following session.

Depending on how many individuals would like to comment, the time limit will be between 2-3 minutes. A sign-up list and instructions will be available at the meeting registration table.

2:30 pm **Break**

2:45 pm **RPB Discussion of Draft Regional Ocean Planning Framework and Workplan: *Compatibility Among Past, Current, and Future Ocean Uses* (continued)**

After hearing public comment, the RPB will resume its discussion and identify key refinements needed to the goal, objectives, and actions related to *Compatibility Among Past, Current, and Future Ocean Uses*. The objective of this session is to:

- Reflect on public input provided to date
- Identify refinements and approve the goal and objectives related to *Compatibility Among Past, Current, and Future Ocean Uses*

- Identify refinements and next steps for draft actions that will be implemented to achieve the goal and objectives

4:15 pm Summary of Meeting Outcomes and Review Next Steps

Laura Cantral, Meridian Institute

4:30 pm Closing Remarks

- *Grover Fugate, Rhode Island Coastal Resource Management Council; NE RPB State Co-Lead*
- *Richard Getchell, Aroostock Band of Micmac Indians; NE RPB Tribal Co-Lead*
- *Betsy Nicholson, National Oceanic and Atmospheric Administration; NE RPB Federal Co-Lead*

4:45 pm Adjourn

Overarching Objective (Applies to All Goals): Periodically Assess Progress Toward Achieving Regional Ocean Planning Goals.....	28

Section 1: Introduction

This document provides the overall framework for ocean planning in the Northeast United States. Its intent is to provide details on the overall approach and work of the Northeast Regional Planning Body (NE RPB), the formal entity charged with developing the regional ocean plan for the Northeast pursuant to the National Ocean Policy as described below.

Background

The health of the ocean and livelihoods that depend on it are vitally important to New England residents, visitors, and businesses. In 2009, ocean-related economic activity totaled over \$11 billion in GDP for the region, providing over 190,000 jobs. People in New England greatly value this traditional ocean-related heritage and are seeking basic needs from the ocean—food, energy, recreation and others—in new and increasingly complex ways.

Simultaneously, there is much to learn about the ocean ecosystem, its natural resources, and existing uses that depend on those resources such as fishing, shipping and recreation. Better scientific information and a better understanding of current and potential human uses of the ocean will enable New England to achieve its economic goals and ensure healthy oceans. Fortunately, ocean planning activities and partnerships have been underway for years at local, state and regional scales in New England.

A Presidential Executive Order signed in July 2010 establishing a [National Ocean Policy](#) gives further momentum to these regional efforts. As described in the National Ocean Policy, Regional Planning Bodies in 9 regions of the United States are tasked with developing regional ocean products or a plan that builds on existing efforts and is driven by the specific needs of each geography. Additional information regarding the National Ocean Council is available at <http://www.whitehouse.gov/administration/eop/oceans>.

The NE RPB convened its inaugural meeting in November 2012 and met for a second time in April 2013. As directed by the National Ocean Policy, its membership includes federal, tribal, state, and New England Fishery Management Council representatives, and leadership is shared by federal, state and tribal co-leads. The Governors of each New England state nominated two agency representatives to the NE RPB, with two ex-officio members representing Canada and New York state. The composition of the NE RPB in part reflects the geography of the planning area, which includes state and federal marine waters of the New England states (i.e., from Long Island Sound, north around Cape Cod and including the United States and state waters of the Gulf of Maine.)

The NE RPB meetings held to date were open to the public and designed to build a common understanding of the task to develop a regional ocean plan and to begin the public discussion on what such an effort should seek to accomplish. Initial discussions resulted in NE RPB member agreement that this initiative should focus on ocean waters of the region, while

recognizing some interest and potential need to connect this effort to estuarine and coastal issues where appropriate. Initial discussions also resulted in general consensus to implement a phased approach from 2012 through 2015. A first phase of identifying goals, objectives and actions, extending through 2013; a second phase of developing products to achieve these objectives extending through and beyond 2014; and a third phase of implementing initial products and assessing progress toward achieving goals in 2015 and beyond. An additional key result of these initial discussions was the agreement that regional ocean planning in the Northeast needs to be conducted through an open and transparent public process. Finally, the NE RPB began discussing potential goals and objectives, leading to the development of this draft framework following the process described below.

Development of the Draft Framework for Regional Ocean Planning in the Northeast

This draft framework builds on NE RPB discussions and additional public discussions including:

1. NE RPB meetings in November 2012 and April 2013 that were open to the public. An outcome of the April 2013 NE RPB meeting was the identification of draft goals and potential objectives that the NE RPB wished to discuss with the public.
2. Extensive stakeholder engagement between NE RPB meetings.
3. A series of public meetings convened by the NE RPB to discuss draft goals and potential objectives in May and June 2013. Ten meetings were held during this time, with at least one in each New England state, during a May-July 2013 public comment period where public input was sought on draft goals and potential objectives. These draft goals and potential objectives were also posted on-line and input solicited electronically. An additional public discussion was held at the June 2013 New England Fishery Management Council meeting.
4. Following the May-July 2013 public comment period, public input was used to revise draft goals and objectives, which were posted on-line in September 2013, requesting additional public comment in advance of the January 22-23, 2014 NE RPB meeting.
5. Internal NE RPB member and work group discussions, conference calls, and meetings.
6. A series of public meetings in each New England state from October 2013-January 2014 to discuss the revised draft goals and objectives.

The timeframe for work reflected in this draft framework is 2014-2015 and the tasks and products that the NE RPB believes are achievable in this timeframe. The NE RPB anticipates that some aspects of this framework will evolve as new knowledge is gained, including through public input and discussion, and as policy and management issues arise. This document builds on that context and includes:

1. A draft schedule for decisions to be made by the NE RPB, which is provided at the end of Section 1 of this document.

2. An overview of the approach and details for public engagement and participation in the regional ocean planning process, which is provided in Section 2. Robust public participation is fundamental to successful regional ocean planning in the Northeast.. The NE RPB has strongly acknowledged this principle as integral to each step of planning (steps include goal setting, development of objectives and tasks to accomplish these goals, development of specific data products, and other phases) .
3. Draft principles, goals, objectives, actions and specific tasks that are proposed to advance Northeast regional ocean planning in 2014-2015. These draft elements are captured in Section 3.

Framework Elements

This section defines the elements of the framework: principles, goals, objectives, and actions. The purpose of these definitions is to provide a common terminology, drawing upon previous NE RPB discussions and public input.

Principles are defined as high-level elements for New England regional ocean planning that form the foundation of, and thus guide the overall outcomes and planning process for, this effort. These principles were the subject of much of the initial discussion of the NE RPB and include:

1. The ocean and its resources are managed for the benefit of the public, now and in the future.
2. The historic, cultural and spiritual importance of the ocean are important to consider.
3. The present and past connection between communities, watersheds and ocean is important.
4. New ocean uses are emerging and existing ocean uses are changing.
5. There is concern about changing ocean health and ecosystem conditions.
6. Better data and information, including traditional knowledge, will lead to better understanding and decision making.
7. There is a need for improved government efficiencies and transparency.
8. There is a need to adapt as environmental, social and economic conditions change.
9. Regional ocean planning must be implemented through existing authorities and regulations. Neither the National Ocean Policy nor regional ocean planning create or change existing authorities.

Additionally, the NE RPB has committed to an open and transparent process for Northeast regional ocean planning. Details on the approach to meeting this commitment are provided in Section 2 below.

Goals are defined as aspirational statements of purpose that also organize subsequent objectives and actions. The three draft goals that have been discussed to date are:

1. Effective Decision-making
2. Healthy Ocean and Coastal Ecosystems
3. Compatibility Among Past, Current and Future Ocean Uses

Objectives are specific, action-oriented statements of how goals can be achieved, which are intended to be measurable and attainable. Objectives are specific to each goal and were the focus of much public discussion beginning in the spring of 2013. Section 3 of this document provides the draft objectives.

Associated with each objective are potential outcomes. Outcomes are statements of results that identify the intended product of each objective. Collectively, the outcomes form the content of the regional ocean plan for the Northeast.

Some objectives and outcomes will evolve as NE RPB decisions and public input inform the future direction of ocean planning in the Northeast. For that reason, it is important to provide milestones for future NE RPB decisions.

Actions are specific tasks necessary to complete each objective. They are practical and consider available capacity (e.g., agency in-kind, ocean planning staff, funding, partnerships, etc.) and timeline. As stated above, the timelines of actions relate directly to the milestone schedule of future NE RPB decisions. Actions for each objective are provided in Section 3.

NE RPB Milestones

The schedule below articulates draft milestones for upcoming NE RPB meetings and decision-making targets for the NE RPB aimed at achieving outcomes. Section 3 provides detailed timelines for individual tasks that will lead to these NE RPB decisions, including public input vehicles, events and their timing, in recognition of the need for regional ocean planning to be transparent. Thus, this milestone schedule is a high-level overview of the NE RPB process from 2014 through early 2016. Importantly, this schedule can be flexible and adjusted over time, based in part on the details of Section 3. If elements of Section 3 change, this schedule will be adjusted. Additionally, as future progress and decisions are made, this schedule also may shift accordingly.

2014 Schedule

January	NE RPB meets to approve goals and objectives and move forward on related tasks
April/May	Public workshops to discuss progress toward goals related to Effective Decision-Making and Healthy Ocean and Coastal Systems

June	NE RPB meeting to review progress toward each goal, including discussing the goal related to Compatibility Among Past, Current and Future Ocean Uses
September/October	Public meetings and workshops for feedback on progress toward each goal
November	NE RPB meeting to review progress toward each goal and determine appropriate next steps

2015 Schedule

Spring	Workshops/public meetings to review baseline assessment and progress on the use of marine life and ocean use data, regulatory coordination and future scenario development
May/June	NE RPB meeting to review draft products for each goal, discuss options for NE RPB future role and the maintenance and advancement of ocean planning products, including the Northeast Ocean Data Portal (data portal)
Fall	NE RPB meeting to review revised products for each goal; determine preferred options for NE RPB's future role and the advancement of ocean planning priorities
Fall/Winter	Public meetings to review revised products

2016 Schedule

Winter	NE RPB meeting to approve final products for each goal and determine NE RPB future
--------	--

It is important to note that the draft goals, objectives, actions and related tasks in Section 3 below are draft pending NE RPB approval. The intent of providing accompanying details about tasks in Section 3 is to ensure that ideas about potential, practically-focused tasks inform public and NE RPB discussion of these draft goals and objectives.

Section 2: Communications and Public Engagement

The NE RPB is committed to a transparent, open approach to regional ocean planning and considers such an approach vital for its success. The NE RPB defines success in this context as an open, transparent, efficient process that engages the public and focuses on public involvement at, and participation in, key decision points.

Specific vehicles for engagement are developed according to the issues being discussed and determination of how to best engage interested parties; thus, there is an understanding that

stakeholder engagement needs, and corresponding activities, will evolve to meet specific needs and as improvements are made to existing efforts.

As described below, there are several layers of regional ocean planning communications and engagement. In all of these efforts, three considerations underlie their development and implementation:

1. An open, transparent and efficient process requires multiple activities, and the specific purpose of each activity must be clear to stakeholders (e.g., to review products, to help design and implement projects, to help gather data, to help inform NE RPB decisions, or other purposes).
2. Stakeholder engagement activities must be practically designed to maximize use of limited resources and to minimize impositions on peoples' time to the extent possible.
3. As stakeholder engagement needs evolve over time, the specific activities underway will similarly evolve. Periodic assessment of stakeholder needs and engagement activities is vital to identifying and making any necessary adjustments.

The following communications and stakeholder engagement activities are underway and will be implemented as part of work plan activities described previously and in more detail in Section 3 below.

Formal NE RPB input and Participation

Direct input and participation in NE RPB deliberations has several aspects, as described below.

NE RPB Meetings

Since its first meeting in November 2012, the NE RPB has conducted its meetings open to the public with time allotted for public comment as specific topics are discussed. These meetings enable public input in a formal setting and comments are recorded for the record and, where resources allow, videos of the meetings have been recorded and posted on-line. Meetings of the NE RPB are scheduled by considering other, existing meetings to avoid potential conflicts and maximize attendance. In addition, the NE RPB encourages written comment on both specific topics before the RPB and general feedback about the planning process. Such correspondence is made available to the entire NE RPB and posted on-line for public access.

The NE RPB has considered feedback about the manner in which it gathers public input at its formal meetings and has made adjustments based on that feedback. The NE RPB will continue to seek input to ensure its formal meetings are appropriately conducted.

Other Public Meetings Held Throughout the Region

In addition to its formal NE RPB meetings, at key decision points in the regional ocean planning process the NE RPB has and will continue to convene public meetings focused on gathering stakeholder input. For example, during the drafting of regional ocean planning goals and objectives, the NE RPB held a series of ten public meetings, at least one in each New England state, to discuss draft/potential goals and objectives. These meetings were less structured than

the formal NE RPB meetings described above, enabling more direct interaction between members of the public and NE RPB members. These meetings were convened specifically to enable public discussion and participation in the critical step of goal-setting.

The NE RPB will continue to conduct such meetings at important decision points in the ocean planning process; for example, to consider options for advancing specific objectives in the Fall of 2014; reviewing baseline characterization information and progress on decided options in spring of 2015; and to review plan products in late 2015. The schedule and specific purposes/points of discussion for these public meetings will evolve as the planning process proceeds.

State Advisory Groups

NE RPB state members are also using existing state advisory entities to provide input into the regional planning process. For example, the Massachusetts Ocean Advisory Commission (formally set up as part of the Massachusetts Ocean Management Plan process, pursuant to the Massachusetts Oceans Act) and the stakeholder advisory panel for the Rhode Island Special Area Management Plan are periodically provided updates and opportunities to discuss regional ocean planning with RPB members and staff. New Hampshire has an existing Port Advisory Committee and Marine Fisheries Advisory Committee which have periodically received regional planning updates and opportunities for discussion. In Maine, NE RPB members have organized an advisory group to discuss regional ocean planning. In Connecticut, existing forums are also being used, such as the state's Maritime Commission. These state-specific forums provide an important, additional vehicle for input into the NE RPB process.

Online Comment Submission

In addition to convening specific in-person meetings, the NE RPB solicits public input through its website. For example, preliminary draft goals and actions (that were discussed during the public meetings in May-June 2013 described above) were posted on-line with an on-line comment form. Such avenues for public input will be used in the future.

Other Communications Tools

From a general communications standpoint, the NE RPB uses its website and email list of interested parties as additional vehicles for informing the public of progress, products, upcoming events and other related news. Contractor support through the consulting firm ERG is used to ensure that website content is up-to-date and timely. Additionally, the NE RPB is developing a series of fact sheets describing specific projects and the ocean planning effort overall as another outreach tool (i.e., for distribution at meetings and events.) These communications efforts are informed by an overall communications strategy that includes specific rationale, intended audience and focus of each communications vehicle. This strategy also enables the NE RPB and ocean planning staff to periodically assess its success and the success of specific communications vehicles in meeting the overall goal for an open, transparent process, as described above.

Project Specific Engagement

In addition to the engagement and communications efforts described above that relate to the formal NE RPB process, there are engagement aspects to many individual projects. These include the following efforts to date:

1. **Commercial fisheries mapping.** This project has included over 50 meetings to date with commercial fishermen, scientists, and fisheries managers throughout New England. The approach has been and will continue to be to use existing meetings wherever possible (e.g., New England Fishery Management Council, state advisory boards, fishing sector meetings, state-specific association meetings, etc.) The purpose of these meetings is to review draft products related to commercial fishing (e.g., approaches to depicting the activity of certain fisheries), identify concerns, and discuss ocean planning issues overall. Future phases of this mapping effort will continue these types of interactions.
2. **Recreational fishing.** There will be a specific focus on identifying and implementing a project (or projects) to appropriately depict recreational fishing activity as well. Some work to date has focused on the charter/for-hire portion of the fishery in New England, but additional work would be needed on that topic and/or to address other aspects of recreational fishing. The approach would be to engage members of the recreational fishery in scoping and implementing any such project, potentially through partnership with the New England states and SeaPlan.
3. **Recreational boating survey.** In partnership with SeaPlan, this project was designed, implemented, and products reviewed to date with the recreational boating industry (e.g., Marine Trades Associations and other such organizations in each state). Thousands of boaters in the region participated in the survey that resulted in important products and key feedback for ocean planning. A series of workshops in New England states to review draft survey results and to discuss regional ocean planning was held in April 2013. Further engagement with the industry will build upon this work.
4. **Engagement of maritime commerce, energy, and aquaculture sectors.** A series of work sessions were held with New England representatives of these three economic sectors in December 2012, following an extensive effort to engage these industries that included 39 individual interviews to help frame engagement. Over 150 people attended these work sessions in total, which were designed to discuss regional ocean planning issues and to help develop information characterizing the industries (i.e., maps and other related data.) Summary documents from this effort are available on-line at <http://northeastoceancouncil.org/committees/ocean-planning/>. This work provides initial input regarding potential issues for regional ocean planning to address from the perspective of these industries and has helped develop new data products as recommended by these industries. Since these work sessions, additional engagement has occurred through presentations and updates at existing industry meetings and forums. This work provides a solid foundation to engage these three industries as appropriate moving forward.

5. **Natural resources characterization.** Through this project, the environmental advocacy community has been engaged through a series of meetings in each New England state with environmental non-governmental organizations to discuss potential issues for regional ocean planning to address. Other opportunities to engage environmental organizations are currently being scoped and will likely occur in May and June 2014. Additionally, on a parallel timeline, marine scientists in the region are being engaged to identify potential data related to natural resources, and to provide guidance on potential map products depicting natural resource distribution and abundance. Next steps for this work are described below in Section 3 and will include regional workshops bringing resource scientists, environmental organizations, and other interested parties together to discuss potential methodologies for product development.
6. **Other recreation interests.** Through a partnership with Surfrider Foundation, other recreational interests beyond boating were engaged throughout the last six months of 2013. This effort had two main purposes: first, to reach out to recreational interests (e.g. dive clubs, wildlife viewing, non-motorized boating clubs and others) to provide information on the regional ocean planning effort in general and opportunities to be engaged; and second, to explore potential project ideas for obtaining potential additional information related to these interests (e.g., mapping areas of importance.) Next steps for this work are described below in Section 3 and include scoping and implementation of specific project(s) to better characterize recreational activity.

In addition to these ongoing and recent efforts, other specific projects, described in Section 3 below, will also have engagement components that will likely include opportunities for additional stakeholders to provide input and information into ocean planning, such as the efforts to characterize recreational fishing activity.

General Engagement Opportunities through Existing Meetings and Publications

NE RPB members and ocean planning staff provide routine updates at existing meetings and through existing publications. These opportunities reach many interested parties and enhance opportunity for discussion. Examples include:

1. Semi-annual meetings of the North Atlantic Ports Association (i.e, port directors from Maine-Virginia) and individual Harbor/Port Safety Advisory Group meetings.
2. Periodic updates at New England Fishery Management Council (NEFMC) meetings, NEFMC Advisory Panel meetings, state fisheries advisory committee meetings and others.
3. Presentations at American Wind Energy Association events
4. Presentations at Environmental Business Council of New England events
5. Publications in regional fisheries-focused publications and periodicals

Section 3: Goals, Objectives and Actions

This section describes draft goals, draft objectives and potential actions and tasks to advance Northeast regional ocean planning in the 2014-2015 timeframe; see Section 1 for definitions of related terms. These elements are draft pending NE RPB approval. Any revisions to the draft objectives and actions in this document would trigger revisions to tasks to ensure that they are appropriate going forward.

Public involvement is a key component of all potential actions and accompanying tasks captured in this section, reflecting the NE RPB's commitment to stakeholder engagement, which is described in detail in Section 2.

Accompanying each objective and its related actions are additional details describing specific tasks, including an overview of timing and specific capacity available for task completion. These details are offered as draft ideas for public and RPB input and are intended to foster detailed discussion about how objectives can be achieved. These details will be revised as necessary according to public input and RPB decisions about the draft objectives (i.e., changes, additions, deletions, etc.)

Finally, Section 3 concludes with an Overarching Objective that is pertinent to all three draft goals and relates to periodically assessing progress toward completing objectives.

Goal: Effective Decision-making

Objective 1. Enhance Inter-Agency Coordination

Note: This objective addresses the timing and scheduling of decisions about sustainable uses of ocean space, sharing of information among agencies, and communication among federal agencies and between state and federal agencies and federally-recognized tribes. It focuses on the National Environmental Policy Act (NEPA) and siting and regulatory programs related to:

- *Marine energy production (i.e., wind, marine hydrokinetic) and infrastructure (i.e., transmission cables, pipelines)*
- *Offshore aquaculture*
- *Sand extraction for beach nourishment*
- *Potential future uses, such as carbon sequestration*

For this objective, it is important to remember that the NE RPB must work within existing regulatory authorities and that coordination and sharing of information pursuant to these authorities includes a review of natural resources and existing human uses. Agencies with non-regulatory roles are incorporated in this effort to ensure appropriate consideration of issues such as national security.

Action 1-1: Review federal statutory requirements for siting energy-related development including electricity generation and transmission, infrastructure such as pipelines, etc., offshore aquaculture, sand extraction for beach nourishment and other potential future

uses of ocean space (e.g., carbon sequestration.) Review analogous programs at the state and tribal levels. In addition to development-specific requirements (e.g., wind energy leasing), include broad requirements such as NEPA. Discuss with agencies, tribes, the regulated community and others how regulations are implemented in practice to identify specific, potential means of achieving this objective, focusing on process-related topics and how information and data related to human activities and natural resources are considered. Identify options for meeting this objective for NE RPB consideration.

Action 1-2: Coordinate with the Bureau of Ocean Energy Management (BOEM) leasing program for offshore wind development. Focus on site assessment and construction-operations plan requirements, use of regional ocean planning data and information, tribal consultation requirements, and other topics.

Action 1-3: Identify opportunities to enhance inter-agency coordination for review of marine energy production, infrastructure, offshore aquaculture and sand extraction for beach nourishment. NEPA and development-specific regulatory programs should be accounted for in this action. Identify concrete steps to overcome obstacles to achieving these opportunities, in part to ensure agency commitments. Convene the regulated community and other interested parties to discuss, and revise opportunities prior to their finalization.

Outcomes

- Strengthened inter-agency coordination and implemented federal/state regulatory efficiencies

Objective 1 Tasks

1. Conduct research on federal and state mandates, and tribal responsibilities, and related agency responsibilities for energy development, offshore aquaculture, sand and gravel mining, and potential future uses (e.g., carbon sequestration).
2. Engage BOEM to determine opportunities for regional ocean planning data or stakeholder engagement to coordinate with offshore wind energy development, including development of Site Assessment Plans and Construction Operation Plans. Opportunities potentially include engaging the fishing community in data requirements associated with site assessment, developing natural resource-based products, and engaging tribes in discussions about consultation efforts and/or identification of cultural resources.

(Objective 1 continued)

3. With contractor assistance, engage federal and state agencies and non-governmental organizations, including the regulated community, to understand how agency mandates related to energy development, offshore aquaculture, sand and gravel mining and carbon sequestration are or would be practically be implemented in New England. Determine gaps and areas of overlap and identify opportunities for strengthened coordination and other ways of meeting this objective. At a public workshop, discuss potential options for meeting this objective and prepare written summary of discussion of options.
4. Consider and select options to meet this objective, with input from agencies, the regulated community and other interested parties. Identify specific agency commitments related to implementing options and discussion of NE RPB future role in advancing inter-agency coordination.

Products/Results

1. Documented assessment of applicable federal and state regulatory authorities and programs.
2. Workshop report identifying potential options for achieving Objective 1.
3. Determination and documentation of specific actions to achieve Objective 1.
4. Possibly identify best practices related to leasing activity in the Northeast, specifically regarding data collection and stakeholder engagement and consultation practices that may be germane to additional activities, in collaboration with BOEM.

Capacity

1. Agency in-kind contribution through participation in relevant internal RPB work group, individual agency meetings, participation in public workshop and review of contractor products.
2. NE RPB state co-chair and tribal capacity for BOEM/offshore wind energy-specific discussions.
3. Staff manages contractor, staffs internal work group and agency meetings and reviews products. Roger Williams University Law Fellow conducts research as an in-kind contribution.
4. Leverage existing legislative reviews developed by agencies and industry consultants.
5. Contractor to support agency and non-governmental engagement, workshop and final report.

(Objective 1 continued)

Timeline

- January-April: Initial agency and stakeholder meetings
- February 2014: Contractor selected
- May-June 2014: Workshop to review preliminary options
- October 2014: Final report with options for NE RPB consideration
- November 2014: NE RPB decision on options to implement
- December 2014 and beyond: Obtain agency commitments to implement and determine future NE RPB role

Objective 2. Implement Specific Actions to Enhance Informed Public Input in Decision-making

Note: Some aspects of this objective may be longer-term, depending on timing and availability of resources. It may be achieved after 2015 unless specific capacity is secured.

Action 2-1: Develop and disseminate publically accessible materials describing regulatory programs related to the types of activities listed under objective 1, including opportunities for public comment, steps where data and information can be provided and overall timeline for decisions. Existing resources will provide much of the material for this task.

Action 2-2: Engage interested parties to identify other potential means of meeting this objective. This could include topics such as: enhanced use of on-line/social media; use of existing public meetings, such as those of the NE RPB, to provide updates on ocean development projects; demonstrating how public input is/would be incorporated in decision-making; and other ways to meet this objective.

Outcomes

- Enhanced publicly available information and opportunities for public participation regarding ocean development proposals and review processes.
- Greater understanding of and ease of participation in, regulatory processes by the public.

Objective 2 Tasks

1. Develop publicly accessible materials that describe regulatory programs for use by potential applicants, decision makers and interested public. Identify opportunities for public comment, specify data and information requirements, and summarize decision making timelines. Efforts under Objective 1 and/or other existing agency materials may inform final products. Potential approach would be to focus on specifics of one type of development review to provide a detailed example.
2. Work with stakeholders to identify other potential ways/products to achieve this objective.

Products/Results

1. Road map or other materials/graphics that clearly describe the permitting process, including data and public inputs, for energy, aquaculture, and sand and gravel for use by applicants and the public.

Capacity

1. There is a need for an agency staff member to lead the effort to develop these materials as an in-kind contribution.

Timeline

- January-September 2014: Work with stakeholders to identify potential products for NE RPB consideration
- November 2014: NE RPB decision on options to implement
- November 2014 – Jun 2015: Develop and distribute products

Objective 3. Incorporate Maps and Other Products into Existing Agency Decision-making Processes

Note: Scientifically-sound, stakeholder-reviewed products should be publicly available through the data portal. When considering this objective, it is important to remember that the NE RPB must work within existing regulatory authorities. Uncertainty and variability in data and other issues must be identified and described for each data product. Caveats associated with data products may limit their utility; some data may be most helpful in generally identifying issues needing further study and/or stakeholders to engage. Certain products may be applicable for preliminary site assessment or consideration of alternatives.

Action 3-1. Within existing regulatory processes, identify potential uses for/applicability of regional ocean planning products. Convene interested parties (i.e., both government and non-government) to discuss this topic and revise products accordingly. With federal and state agencies, and tribes as appropriate, identify and implement specific measures to ensure commitment to achieve this objective.

Action 3-2. Update the data portal, reflecting the results of Action 3-1. Enhance data portal functionality through better presentation, characterization, and visualization of products.

Action 3-3. Work with appropriate agencies/data owners to increase their responsibility for maintaining/updating data products and the data portal, beginning with illustrations of the utility of products developed for regional ocean planning purposes and recognizing future budget issues.

Outcomes

- Regional ocean planning products and information enable preliminary site assessments, provide a better understanding of existing conditions, and/or otherwise contribute to regulatory efficiencies.
- Stakeholders continue to be directly engaged in developing products for the data portal.
- The data portal and its products are maintained and updated in the long-term.

Objective 3 Tasks

1. Continue to develop and maintain the data portal as a central repository of information to support decision making and to engage stakeholders. This includes the development and maintenance of datasets, the www.northeastoceanandata.org web site and the technology to host and serve this information.
2. Implement functionality enhancements to support evolving needs for decision-making and different user communities. Potential enhancements include simple map viewers; 3-D videos/simulations; custom base maps; and simplified presentations of complex habitat, climate or other ecological models. Potential enhancements for GIS/data managers include: functionality to query maps to understand scientific certainty and access underlying data and data footprints; scripts and tools to improve access or processing of large agency databases (e.g., Automatic Identification Systems, Vessel Monitoring Systems). NE RPB decisions will prioritize these enhancements.
3. Identify opportunities for the data portal to support existing regulatory processes (e.g., NEPA, Clean Water Act Section 404 and Rivers and Harbors Act Section 10, Coastal Zone Management Act federal consistency, BOEM leasing, Federal Energy Regulatory Commission licensing). Engage regulators to identify data and technology needs to enhance utility of the data portal and related products.
4. Engage agencies and non-governmental organizations to determine options for long term maintenance of data portal products and technology.

Products/Results

1. Data portal website includes key data products for ocean planning resulting from extensive stakeholder engagement and science integration. Website also serves as a primary tool for engaging stakeholders and making management and regulatory decisions.

(Objective 3 continued)

2. Improved visualization and communication of key datasets to support management, regulatory review and stakeholder engagement. Improved access and capabilities to analyze scientific data for GIS/data managers.
3. Data portal is used by NE RPB agencies to support regulatory decisions, by the regulated community to inform project development and by the public to engage in decision making processes.
4. Long-term responsibilities and funding sources for data portal products and technology are implemented.

Capacity

1. Staff manages a data portal team, data development, technological enhancements to data portal and stakeholder review of data products. The team includes National Oceanic and Atmospheric Administration (NOAA) Coastal Services Center, SeaPlan, The Nature Conservancy, ASA, Northeast Regional Association of Coastal and Ocean Observing Systems (NERACOOS), and additional contractors.
2. Direct data portal support from BOEM and NOAA Coastal Service Center through Multi-Purpose Marine Cadastre project.
3. Direct data portal support from SeaPlan and The Nature Conservancy.
4. NE RPB agencies review data priorities and draft products and provide input into overall data portal development and discussions of future responsibilities.
5. NE RPB agencies participate in discussions to identify opportunities for data portal to support existing processes.
6. Substantial leveraging of federal and state agency datasets and technology.
7. Increased federal and state agency participation and responsibilities for development of individual data products and for the data portal itself; leverage climatological datasets maintained by NERACOOS.

Timeline

- Ongoing: Manage and upgrade data portal
- Ongoing through September 2014: Engage agencies and non-governmental organizations to identify potential applications of the data portal in existing regulatory processes
- Ongoing: Initial discussions about data portal components and their potential long term hosts
- November 2014 – December 2015: Implement enhancements considering other decisions made by the NE RPB

Objective 4. Improve Respect for the Customs and Traditions of Indigenous Peoples in Decision-making Processes

Action 4-1. Identify specific means by which tribal consultation could be enhanced in existing decision making processes, including the use of information about resources that are of cultural, historic or spiritual significance to the tribes.

Action 4-2. Involve regional tribes in the submerged paleocultural landscape work of the Narragansett tribe to assess project's potential utility in decision-making.

Outcomes

- Identification of options for enhancing tribal consultations
- Greater regional tribal community participation in paleocultural project of the Narragansett tribe

Objective 4 Tasks

1. Involve tribal coordinator in internal work group, research, and discussions, including those with BOEM, that are aimed at improving inter-agency coordination, public participation and the use of data in existing decision making processes
2. Tribal coordinator convenes tribes to develop options for enhancing tribal input into decision making processes
3. Tribal coordinator convenes annual meetings to consult with the Narragansett Tribe about submerged paleocultural landscape project

Products/Results

1. Options for improving tribal consultation and use of information on areas of tribal importance in existing decision-making processes
2. Identification of goals for upcoming submerged paleocultural landscape research season, including the integration of tribal lore and history in ongoing research

Capacity

1. Tribal coordinator
2. Tribe in-kind involvement in activities convened by the tribal coordinator

Timeline

- January-May 2014: Initial discussions with tribes
- Spring 2014: Annual submerged paleocultural landscape research meeting
- June -October 2014: Options developed for improving tribal consultation
- November 2014: NE RPB decides on options to implement
- Spring 2015: Annual submerged paleocultural landscape research meeting

Goal: Healthy Ocean and Coastal Ecosystems

Objective 1. Characterize the Region's Ecosystem, Economy and Cultural Resources

Action 1-1. Using existing data, produce spatial characterizations of abundance and distribution of bird, sea turtle, shellfish, marine mammal, fish and bottom (benthic) habitats. Consider incorporating issues such as historic trends, future changes from climate change and other factors, and scientific uncertainty. Consider applicability and utility of related products such as those related to ocean acidification, biodiversity, productivity, non-native/invasive species, ecology and species biology (including migration), and the physical/oceanographic environment.

Action 1-2. Assess regional efforts to identify areas of ecological importance or measure the health of the marine system. The first step in this action will be to define these terms (i.e., ecological importance and health) to provide further specificity and direction. Include a review of studies assessing the vulnerability of marine life/habitats to human activities and climate change, and the current state of the science regarding cumulative impact assessment to help identify science and data needs. The purpose of this action is to better understand scientific and data issues and projects underway or recently completed, to inform future NE RPB decisions on the applicability and appropriateness of such work for regional ocean planning.

Action 1-3. Identify resources/areas that are of cultural, historic, ecological, or spiritual significance to tribes.

Action 1-4. Develop spatial and other related information for shipping, commercial fishing, boating, recreational fishing, energy, marine infrastructure (including submarine cables), aquaculture and recreation. Engage stakeholders in project design, data development and product review.

Action 1-5. Develop an assessment of the regional maritime economy by compiling existing analyses/data; include specific assessment of working waterfronts and link to use of marine waters.

Action 1-6. Develop a regional baseline assessment incorporating results of Actions 1-1 through 1-5 above.

Action 1-7. Pursue incorporating results of Actions 1-1 through 1-6 above into Objective 3 under the goal related to Effective Decision-Making above.

Outcomes

- Characterization of human activities, the ocean and coastal economy, cultural resources, and marine life and habitats in a baseline assessment.

- Engagement of scientific community and the shipping, commercial fishing, boating, recreational fishing, energy, environmental and recreation communities, and other stakeholders.
- NE RPB decisions on the incorporation of resulting products into existing decision-making as appropriate, provided that specific caveats associated with each product are clearly articulated.

Objective 1 Tasks

1. Informed by discussions with the scientific community, integrate existing data and model output to characterize marine mammal, bird, and fish distribution/abundance. Build on and integrate existing federal, state, and NEFMC projects where possible. Provide periodic opportunities for public input and feedback about methods and draft products.
2. Summarize efforts that utilize marine life and benthic data to classify habitat, characterize areas of ecological importance, assess ecosystem health and/or deterioration, determine vulnerability and model cumulative impacts. Develop options for proceeding with any or none of these assessments, beginning by clearly defining these terms. Convene NE RPB, scientists and stakeholders to discuss options to inform NE RPB decisions on how to proceed/what option(s) to implement.
3. Convene a cultural work group composed of tribes and federal and state agency representatives to:
 - a. Review data portal with tribes
 - b. Develop maps of cultural resources using existing tribal and federal/state data
 - c. Identify and prioritize gaps associated with existing data
 - d. Develop options for using existing data to identify areas of tribal significance
 - e. Determine how to expand Narragansett submerged paleocultural landscape research to other areas
 - f. Secure funding to improve tribal oral history standards, including best practices for utilizing technology combined with traditional skills to gather data
4. Continue to engage fishing community in further refinement of maps characterizing fishing activity. Consider utility of resulting products based on considerations such as changing management, climate change, inherent data limitations and other factors.
5. Map additional recreational uses (beyond recreational boating) and, if possible, determine the economic contribution of these activities to the regional economy.
6. Continue to engage the maritime commerce sector in the development of maps characterizing the use of marine waters for navigation, transportation, and security. Continue discussions about potential/future scenarios building on existing efforts by U.S. Department of Transportation Maritime Administration (MARAD), U.S. Coast Guard and state/regional port authorities.

(Objective 1 continued)

7. Continue to engage the energy and marine infrastructure sectors in the development of maps characterizing the use of marine waters for energy and marine infrastructure. Continue discussions about potential future scenarios for each energy sector that build on existing efforts by BOEM, US. Department of Energy, the New England states, and industry projections.
8. Continue to engage the aquaculture sector in the development of maps characterizing their use of marine waters and discuss potential future scenarios, particularly in federal waters.
9. Conduct an assessment of the New England maritime economy that builds on economic characterizations conducted for ocean planning, by NE RPB agencies, and other sources. Include assessment of issues related to working waterfronts (e.g., identification of publically-funded projects.)
10. Integrate information from ocean planning projects to date, the data portal, and other existing sources to develop and periodically update (as products become available) a written regional baseline assessment. Potential chapters include:
 - a. overview of the region's geography
 - b. oceanography and water column
 - c. geology and seabed
 - d. habitat and marine life
 - e. archaeological and cultural resources
 - f. ocean uses and regional economy (integrating the economic assessment)
 - g. climate change and changing conditions

Products/Results

Interactive maps depicting marine mammal, bird, and fish distribution/abundance available through the data portal. Each map product clearly explained through an "About this Map" feature.

1. A review of existing efforts to utilize marine life and habitat data and development of potential options for NE RPB consideration; NE RPB decision on which/if any options to implement.
2. Maps depicting areas/resources of cultural importance incorporated into the data portal.
3. Maps of commercial fishing activity incorporated into the data portal.
4. Maps of recreational fishing, diving, kayaking, surfing, and other recreational uses incorporated into the data portal.
5. Maps of maritime commerce, energy, and aquaculture incorporated into the data portal, and methods for assessing industry trends/scenarios identified.
6. Regional economic assessment incorporated into the baseline assessment.
7. Baseline information consolidated into single report for review by public and NE RPB.

(Objective 1 continued)

8. For all products developed for this objective, incorporation of measures to enhance their utility in decision-making and include results of NE RPB decisions.

Capacity

1. NE RPB agency in-kind through participation in internal work group to scope projects, review preliminary products, etc. NOAA National Centers for Coastal Ocean Science has offered assistance as well.
2. Staff develops requests for proposals, scopes projects, manages contractors and ensures coordination with other projects and review products.
3. Technical committee, comprised of scientific experts in the region, provides input to development of products, reviews methodologies, etc.
4. Data/science contractors for natural resource products and integrate in data portal.
5. Project management contractor for product development.
6. Baseline assessment contractor to compile baseline and economic assessment.
7. Public engagement contractor to assist with public meetings/workshops and other specific meetings to review products and methods with funding as needed from public engagement contract.
8. Additional federal and state in-kind, based on existing/related projects such as:
 - a. The Atlantic Marine Assessment Program for Protected Species (AMAPPS): BOEM, NOAA National Marine Fisheries Service Northeast Fisheries Science Center (NEFSC), U.S. Fish and Wildlife Service (USFWS) and USFWS North Atlantic Landscape Conservation Cooperative
 - b. Products developed by NOAA National Centers for Coastal Ocean Science, including modeling and mapping bird distributions along the Atlantic Coast
 - c. NOAA Cetacean Mapping Working Group (CetMap)
 - d. NOAA NEFSC Ecosystem Assessment Program's Spatial Tools for ecosystem based management and other modeling projects (including collaborations with TNC)
 - e. Rhode Island and Massachusetts marine mammal and avian surveys and other ocean planning –related products
 - f. NERACOOS products
9. Partners in the academic and conservation science community (e.g., Ocean Biogeographic Information System Spatial Ecological Analysis of Megavertebrate Populations (OBIS-SEAMAP), TNC, etc.)

(Objective 1 continued)

10. Potentially leverage BOEM offshore wind vulnerability studies, Massachusetts and Rhode Island efforts to assess ecological value, consider development of an Ocean Health Index, assessment of cumulative impacts, ecosystem services models (University of Rhode Island, Boston University/University of California Santa Barbara/SeaPlan, Natural Capital Project), and others.
11. To support commercial and recreational fishing mapping, contractor assistance, agency in-kind through participation in internal work group, and staff to manage projects and coordinate with data portal.
12. To support recreational activity mapping, contractor assistance, agency in-kind through participation in internal work groups, NOAA National Marine Fisheries Service (NMFS) assistance, staff to manage projects and coordinate with data portal, and potential in-kind from Surfrider Foundation and SeaPlan.
13. To support mapping of maritime commerce, energy, and aquaculture, agency in-kind through participation in internal work group, and staff to manage projects and coordinate with data portal.
14. To support identification of culturally important resources, in-kind through participation in internal work group, tribal engagement coordinator to manage projects, staff to coordinate with data portal, and leveraging existing work such as the Narragansett Tribal-University of Rhode Island mapping of potential paleocultural resources.

Timeline*For tasks related to marine life:-*

- January-February 2014: Issue request for proposal(s) and select contractor(s) for characterizing marine mammals, birds, fish
- March-October 2014: Summarize options for tools/products related to identifying ecologically important areas, assessing vulnerability and/or cumulative impacts, etc.; technical committee input contributes to summary
- March-October 2014: Develop draft marine life products with periodic public and technical committee meetings to review progress
- October 2014: Public workshops to review progress on draft marine life products and discuss options for additional tools/products
- November 2014: NE RPB decision about how to utilize marine life and habitat data and any additional tools/products
- December 2014 – December 2015: Continue to develop marine life-related products, review with public, and NE RPB, and integrate into data portal and baseline assessment

(Objective 1 continued)

For tasks related to characterizing human activities:

- January 2014-January 2015 (possibly longer): Map commercial and recreational fishing activity
- Timeline for recreational activity dependent on partner funding availability; likely schedule is to scope through Summer 2014, then implement in Fall 2014-Winter 2015; finalize products in Winter-Spring 2015
- January-June 2014: Next phase of characterizing/engaging maritime commerce and aquaculture activity
- To be determined: Timing for engaging energy community will be coordinated with BOEM

For tasks related to characterizing cultural resources:

- January-March 2014: Review data portal and identify existing tribal, and federal and state datasets of cultural resources
- March-June 2014: Develop and review maps of cultural resources using existing data
- July-December 2014: Review draft maps with cultural work group and develop options for using maps to identify areas of tribal significance

For tasks related to baseline assessment:

- January-March 2014: Issue request for proposal(s) and select contractor(s) for compiling baseline and economic assessment
- March 2014-June 2014: Develop baseline and economic assessment outline for NE RPB and public review

Objective 2. Identify and Support Existing Non-regulatory Opportunities to Work Toward Conserving, Restoring, and Maintaining Healthy Ecosystems

Notes: This objective is longer-term, to be achieved after 2015 unless specific capacity is identified. Existing non-regulatory programs at the federal, tribal and state level are widespread and address many coastal and ocean health issues. Examples include habitat restoration activities, certain water quality improvement programs, enhancements to existing infrastructure, assessment of invasive species, etc.

Action 2-1. Identify existing and potential programs that are or would be directly related to conservation, restoration and maintaining healthy ocean and coastal ecosystems at a federal, tribal and state level. Identify opportunities for better coordinating, leveraging and supporting those programs to address priority regional ocean management needs.

Outcome

- Identification of related programs and specific steps taken to leverage these programs to meet regional ocean management needs.

Objective 2 Tasks

1. Inventory state, federal, tribal, and other regional partners' restoration and conservation activities, identify areas where programs relate directly to ocean planning goals, and identify opportunities to coordinate and support these programs.

Products/results

1. Comprehensive inventory of those restoration and conservation activities that relate closely to ocean planning goals and objectives.
2. Opportunities to strengthen ocean/coastal ecosystem restoration and conservation.

Capacity

1. Federal and state agency staff lead effort
2. Lead partner (to be determined)
3. Leverage existing federal and state programs

Timeline

- January 2014– June 2015

Objective 3. Produce a Regional Ocean Science Plan that Prioritizes Ocean Science and Data Needs for the Region for the Next Five Years

Action 3-1. Engage agencies, tribes, the scientific community and other stakeholders to prioritize scientific/data needs, in particular focused on management needs and information that will be important for future management decisions. Coordinate with existing efforts that are underway or related, and recognize continuing need for basic data development to fill gaps in data, science, and knowledge, and budget challenges that may enhance gaps in the future. For priority topics, describe desired outcomes and identify potential ways of addressing those issues, including consideration of leveraging/partnering with existing efforts.

Action 3-2. Building on results of projects related to the baseline assessment, identify priority data collection and science gaps for the ocean science plan described below. As part of this action and general engagement efforts, identify if there are priorities that could meet other purposes beyond those of regional ocean planning.

Outcome

- Regional ocean science plan to address the region's ocean priority science and data needs.

Objective 3 Tasks

1. Identify existing science plans and those components that relate most closely to regional ocean planning goals and objectives. Develop a five to ten year regional ocean science plan that identifies gaps and integrates science priorities developed through the ocean planning process with other regional and agency efforts.
2. Consider technical committee review of draft science plan to incorporate scientific input.

Products/Results

1. Five to ten year science plan that prioritizes ocean research and data development

Capacity

1. Staff develops science plan with state and federal agency staff; potential agency lead.
2. Leverage existing science plans at the federal, regional, and state level
3. NOAA NCCOS offered assistance

Timeline

- March 2015-December 2015
- January 2014– June 2015

Goal: Compatibility Among Past, Current and Future Ocean Uses

Objective 1. Increase Understanding of Past, Current and Future Ocean Uses

Note: Addressing project-specific compatibility issues generally is the domain of specific project-review processes and thus is appropriately addressed during permitting. Regional ocean planning can add value by enhancing understanding of trends in human activities, to the extent foreseeable, and by ensuring that specific projects underway incorporate considerations resulting from engagement of stakeholders in the Northeast.

Action 1-1. Examine technological, management, economic, cultural, environmental, or other factors to enhance understanding of reasonably foreseeable changes in human uses. Engage industry representatives and experts in maritime commerce, recreation, commercial fishing, marine energy development, marine infrastructure (including submarine cables), and offshore aquaculture to determine potential future scenarios or trends, if possible. Gauge potential for relatively new uses such as offshore aquaculture and extraction of sand and gravel for beach nourishment.

Action 1-2. Use the results of Action 1-1 to assess the utility of human activity maps using retrospective data. Identify the need, timing, and other considerations for periodic updates to such maps.

Outcomes

- Identification of potential future changes to human activity maps
- Information describing potential future uses of ocean space, the viability of existing human activity maps and need for updates.

Objective 1 Tasks

1. Based on baseline assessment, public engagement, and NE RPB decisions about planning priorities, determine whether and how to develop information (e.g., trends or scenarios related to existing uses) related to future ocean activities. In collaboration with existing efforts, engage the aquaculture community to identify trends and, if possible, develop potential future activities in response to technological, economic, and environmental factors.
2. In collaboration with BOEM-led Northeast Sand Management Working Group and other relevant federal/state efforts, develop potential future scenarios for the use of offshore sand and gravel resources for beach nourishment and coastal protection (including identifying potential sand borrow areas).
3. In collaboration with BOEM, DOE, ISO New England, and other relevant agencies and efforts, develop potential future energy scenarios that integrate BOEM's offshore wind energy siting, DOE funded demonstration projects, and other utility-scale or research projects. Consider regional transmission needs in future scenarios.
4. In collaboration with existing efforts at DOT/MARAD and USCG, engage the maritime commerce community to identify trends and, if possible, develop future spatial scenarios due to technological and economic factors, including Panama Canal expansion, America's Marine Highways, and increased offshore energy development.
5. In collaboration with NMFS, NEFMC, and state fishery management agencies, summarize management and environmental factors that might affect maps of commercial fishing activity.
6. Consider potential future scenarios for other ocean uses, such as recreation, telecommunications, and dredging and disposal in collaboration with relevant agencies and industry partners.
7. NE RPB determines how information from these tasks could be used in regional planning and/or to support existing management activities.

Products/Results

1. To be determined by the NE RPB as informed by discussions with stakeholders

(Objective 1 continued)

Capacity

1. Staff manages contractors
2. Contractor support via public engagement and baseline assessment contracts. Potential additional use of existing funds to develop additional products as warranted by future discussion and NE RPB decision.
3. NE RPB agency in-kind
4. Build on existing efforts and studies (Marine Highways-related efforts, Atlantic Coast-Port Access Route Study as appropriate, others)

Timeline

- January-October 2014: Engagement of stakeholders to determine feasibility and utility of developing future scenarios
- November 2014: RPB decides whether/how to pursue future scenario/trends development
- December 2014-June 2015: Develop future scenarios integrating existing industry-specific plans, as appropriate
- July-December 2015: NE RPB determine how to utilize future scenarios

Objective 2. Ensure Regional Issues are Incorporated in Ongoing Efforts to Assess New and Existing Human Activities

Note: Several ongoing projects are looking at potential interactions between various human activities. Many of these projects relate to ongoing offshore wind energy development. Aspects of these projects may benefit from a regional perspective, recognizing that it will be important to understand their scope, timing, and intended purpose to help identify opportunities to contribute to such work.

Action 2-1. Summarize status of projects such as the Atlantic Coast Port Access Route Study, BOEM-led Northeast Sand Management Working Group, regional efforts to assess commercial and recreational fishing and offshore wind energy development, the identification of potential paleocultural resources offshore Rhode Island, and others.

Action 2-2. Using the assessment in Action 2-1, identify considerations for these existing efforts and work with sponsoring entities/agencies to do so. Identify need to facilitate discussions between diverse users and agencies and undertake such discussions where appropriate.

Action 2-3. Convene stakeholders and experts to facilitate information sharing on the status of transmission planning in the Northeast and related activities (e.g., grid connections, geographic needs/desirability, etc.). The purpose of this action will be to enhance understanding of the transmission planning and where transmission activities might interface with the other regional ocean planning goals and objectives.

Outcomes

- Regional perspectives incorporated in ongoing projects such as those identified above
- Public discussion of regional issues associated with offshore wind siting such as transmission

Objective 2 tasks

1. Based on results of public and sector engagement, and NE RPB decisions; agency representatives ensure regional feedback informs existing agency efforts to characterize ocean activities.
2. Convene workshop and/or other suitable public forums to discuss regional electricity transmission-related issues.

Products/Results

1. Existing programs ensure consistency with regional needs
2. Written summary of regional transmission-related issues
3. Public and NE RPB discussion of regional issues associated with offshore wind siting such as transmission

Capacity

1. Federal and state agency staff coordinate with existing efforts such as those being led by the Massachusetts Clean Energy Center
2. Contractor support via public engagement contract

Timeline

- January 2014-December 2015

Overarching Objective (Applies to All Goals): Periodically Assess Progress Toward Achieving Regional Ocean Planning Goals

Action 3-1: Develop and implement decision- tracking mechanisms to identify if objectives under three goals are being met. Include input from stakeholders and interested parties. This action will result in longer-term (beyond two years) needs being identified and necessary steps implemented to meet those needs.

Outcomes

- Identification of progress toward achieving this goal and implementation of revised measures as necessary.

Planning Goals, Objectives,
and Actions

Regional Planning Body Member Comment on Draft Northeast Regional Ocean Planning Goals, Objectives, and Actions

October 2013 - January 2014

Introduction

This summary compiles Regional Planning Body (RPB) member comment to date on draft goals, objectives, and actions for Northeast regional ocean planning from the following: 1) full RPB member call (10/04/2013); 2) federal RPB members call (10/31/2013); 3) full RPB member call (11/13/2013); 4) New England federal partners meeting (11/26/2013); 5) tribal RPB member calls throughout November 2013; and 6) RPB member emails from October through December 2013. The summary begins with general comments that relate to all three goals, followed by input specific to individual goals and objectives.

In certain instances, further RPB member discussion is needed to help resolve the following topics:

- Continue exploring the need to identify partner activities and academic research related to and beyond the scope of the regional ocean planning effort as appropriate.
 - Consider adding a suggested new and tenth principle (i.e., ocean resources play a critical role in our local and regional food systems and need to be sustained for future generations).
 - Include language about using social science to understand federal agency relationships and how coordination can be improved (e.g., network analysis).
 - Transfer results of coordination with Bureau of Ocean Energy Management (BOEM) to other projects/types of development, assuming there is agreement on best practices for data collection.
 - If it is possible to identify resource areas critical to maintaining a healthy ocean and coastal ecosystem, determine potential feasibility for existing laws and policies to protect such areas.
-

General comments

- Throughout the Framework and Workplan document, when mentioning state and federal agencies, include tribal governments as appropriate.

- Put the Workplan's section on stakeholder engagement as first section of the Framework and Workplan document.
- Include text in introduction stating that this work plan focuses on 2013-2015 and thus will lead to additional work beyond 2015 depending on future capacity.
- Outcomes
 - Identify outcomes and user groups that would benefit from each outcome. RPB will get more robust public comment if people understand project outcomes. Put options on the table for discussion as early as next spring to help people consider and understand possibilities.
 - Being specific about outcomes will make it easier to track progress.
- In Goal 1, identify specific regulatory processes, actions, or decision making that projects can feed into.
- "In-kind" should also identify external partner work to show how actions integrate with other activities.
- Summarize grants to illustrate their connection to the work plan; clearly identify what products can be covered by grant funding and what work lacks existing funds. If projects lacking funding are a priority, identify sources that could be targeted and actively seek additional investments. Projects that require additional resources/support should be put into timeframe beyond 2015.
- Summarize somewhere (may not need to be in the Framework and Workplan) who is working on other topics of potential interest (e.g., invasive species). This could help identify issues that are being addressed already and that may be beyond the scope of the regional ocean planning effort.
- Think of other agency staff (beyond RPB members) that need to be brought into Framework and Workplan review.
- Identify activities throughout the Framework and Workplan that overlap with agency commitments reflected in the National Ocean Policy's Implementation Plan.
- Consider ways to incorporate concepts of resilience planning.
- In the timeline, show that the RPB is headed towards the creation of an actual regional ocean plan and not a series of really good, but seemingly disjointed projects and initiatives.
- Put brief overview of work groups as part of work plan introduction.
- Consider developing some way of endorsing regional science efforts that support goals/objectives.
- Across all goals, change wording about periodically assessing process to focus on assessing progress.

Comments on Effective Decision Making Goal

General Comments

- Talk about specific projects to get at “opportunities for enhanced coordination”. Agencies that need to be involved in conversation include the U.S. Army Corps of Engineers.

Objective 1

- In italicized introduction, include in last sentence: “This objective will focus on timing/scheduling, interagency information sharing, and communication at a federal level and between state and federal agencies including federally recognized tribes.”
- Include language to demonstrate that non-regulatory agencies have a role to play. (e.g., U.S. Navy is non-regulatory but has a big impact related to national security. Include words national security in over-arching objective to reflect enhanced coordination from a non-regulatory perspective.
- National Environmental Protection Act (NEPA) processes may be an important avenue for enhancing inter-agency coordination. Under Objective 1, consider adding a NEPA-specific action to address this point.
- Ensure that Construction and Operations Plan (COP) requirements are included so all appropriate avenues of coordination with BOEM are considered; note that initial efforts to engage BOEM on this topic were underway prior to the federal shutdown. Additionally, draft language to address tribal aspect of the need to enhance coordination with BOEM wind energy siting as well.
- Focus research on federal mandates and states through their implementation of federal statutes (i.e., Section 401, CZMA, etc.) To show progress, start with 1-2 agencies and build a template to include states.
- Greater need for specific agency commitment/capacity under this objective.
- Clarify that best management practices in Products/Outcomes section refers to stakeholder engagement and standards for data collection.
- Consider transferring results of coordination with BOEM to other projects/types of development (i.e., aquaculture, pipelines, transmission lines) assuming there is agreement on best management practices for data collection.
- Clarify that best management practices are related to leasing process and not construction or operations. The RPB should not be providing any comments or recommendation that would otherwise be provided by agencies.
- Note that for BOEM work, tribes want an opportunity to weigh in on the consultation process and include language about identifying significant cultural and ecological resources. Also, identify tribal capacity to do such work.

- Consider also the engagement of non-regulatory governmental stakeholders (e.g., U.S. Navy, U.S. National Park Service, State Historic Preservation Offices, Tribal Historic Preservation Offices).

Objective 2

- Important that this objective also include a specific focus on improving/demonstrating how public input is incorporated into decision-making processes.
- Be clear about who developing product for, concerned citizen or developer. This will help outline approach and level of detail needed. Two options were discussed:
 1. Develop high level road map for the three activities that describes the type of project, the agencies involved, the type of public comment, and a link to agency sites to find more specific information.
 2. Develop specific information for specific projects; this approach will be more helpful to the regulated community or stakeholders that care about specific processes.
- Actions should focus on increasing public awareness/understanding of what is going on, why and how to get involved.

Objective 3

- Put the responsibility to update and maintain data in the hands of the agencies that are the source vs. leaving that role in the hands of the data portal team. Include a focus on providers of data in text of this objective.
- Include text that explicitly states agencies' role and commitment to use the data portal as a tool to improve decision making.
- Identify and investigate opportunities to develop maps or other products for the data portal that would help ensure tribal resources and priorities are addressed/considered in planning processes.
- Specify outcome as a list of priority datasets for project review/screening tool.
- Clarify which decision-making process we are trying to incorporate the data portal into. Project should start with Federal agencies.
- Link products to actual users of data to increase likelihood of agency support/funding.
- Outcomes should include success stories of data portal use (e.g. Comcast cable, Maine tidal energy) to strengthen case for continued development/maintenance of tool.
- Capacity needed for federal agencies to create list of data sources that they are responsible for, including schedule for updates.

Objective 4

- Include identification of tribal resources of cultural/historical significance.
 - Consider new action of involving regional tribes in the Narragansett's submerged paleocultural landscape work through participation in annual consultation meetings. These meetings are a forum for scientists and tribes to information share at the beginning and close of research seasons each year (i.e., four year process and spring 2014 is likely the next consultation meeting.) Discuss how to integrate additional tribal lore and history into the process.
-

Comments on Healthy Ocean and Coastal Ecosystems Goal:

General Comments

- Include state resource mapping projects beyond the ones that are listed (e.g., avian data, eelgrass mapping, state fisheries resources mapping in Massachusetts) and Northeastern Regional Association of Coastal and Ocean Observing Systems (NERACCOOS) sentinel mapping.
- Indicate ecosystem mapping and modeling efforts where possible.
- Strengthen language about importance of identifying gaps in baseline data including where there are gaps through 2015 and beyond.

Objective 1

- Include in Objective 1: Characterize the region's ecosystem, economy and cultural resources
- Work with the scientific community and other interested parties to integrate natural resource data and model-derived products to characterize marine life, habitats and ecology Also, add ecology and non-native/invasive species to the list of issues and "Assess the changes currently taking place as a result of climate change".
- Form a tribal cultural work group to enhance regional dialog data/information gathering (e.g., work coming out of Narragansett can benefit all tribes by helping to determine presence or absence of paleocultural sites.) Identify areas and resources that are of tribal importance, especially considering tribal sustenance as it relates to diet, culture, and ecosystem components. Improve understanding and gathering of tribal oral histories to help determine presence and absence of paleocultural sites.
- Terms such as ecological areas of importance and measures of health need further definition and refinement.
- Assess and summarize efforts in the region including studies from tribal aquaculture operations that have produced significant findings identifying areas

- of ecological importance or measure the health or deterioration of the marine systems.
- Elevate role of industry to develop science and data. Also consider adding these concepts to Objective 3.
 - Discuss the importance/need to characterize economic and environmental linkages in this goal.
 - Include language about communities and working waterfronts in characterization of regional economy. A lot of concern from public about waterfronts and coastal economies importance in this effort. Massachusetts, Maine and Rhode Island along with fisheries mapping work has information that could be captured as part of this effort.
 - Review how agencies conduct cumulative impact analysis. This is a point of clarification/conversation needed with the RPB. Suggestion to have text lead into next action, "...identify more information we might need to improve.
 - Include concepts of climate change.
 - Consider adding outcome in this or perhaps a different goal (i.e., improved collection of tribal oral histories to determine presence or absence of paleocultural sites.)
 - Clarify that these projects are developing new products from existing information/data. Products are necessary for potential next steps (e.g., , any identification of ecological areas, assessment of ecosystem health).
 - National Marine Fisheries Service (NMFS) can help with participatory mapping and recreational fishing. Some of the recreational community could be targeted for winter 2014-2015.
 - Go beyond characterization to identify potential strategies to protect resource areas critical to maintaining a healthy ocean and coastal ecosystem.
 - Federal capacity mentioned
 - National Oceanic and Atmospheric Administration (NOAA) Coastal Services Center and Economics: National Ocean Watch (ENOW)
 - U.S. Department of Transportation – Phase 1 of the *Panama Canal Expansion Study*.
 - U.S. Coast Guard: National Arctic Strategy includes study of expanding economic impacts of opening up the Arctic.

Objective 2

- Include mention of tribes in italicized header.
- Identify potential opportunities to/develop/enhance connections, partnerships or alignment between non-regulatory and regulatory programs.

- Focus on this product being a collection of existing inventories with product being an atlas of inventories to help leverage additional funds and be used for implementation.
- Convene staff from state, federal, tribal restoration programs, partners (e.g., The Nature Conservancy) at a workshop to identify priorities for restoration.
- Capacity considerations include:
 - NMFS Restoration Center has an overall plan of restoration activities and is looking at state restoration plans
 - State coastal zone management programs
 - National Estuary Programs
 - Stellwagen Bank National Marine Sanctuary
 - The Nature Conservancy

Objective 3

- Reflect existing related efforts (e.g., Gulf of Maine and New York bight-focused efforts)
- Focus on gaps in baseline science and information, recognizing that constraints in baseline funding may increase gaps in future.
- Clarify that gaps refers to data collection, science, and knowledge. Also mention the need to coordinate science plan with existing science plans. Get input from academic community on science plan or focus on existing bodies and especially ones that have existing science plans with a focus on natural resource and working waterfronts from a national perspective (e.g., Northeast Sea Grant Consortium, RARECOM, or NOP Science Committee, Ocean Research Advisory Panel)) on this objective's actions. Natural Resource Work Group focus is here too.
- Consider the value of an science/academic research endorsement program. There is a lot of existing ocean and coastal research, and we should encourage research that achieves goals of the regional ocean science plan. By offering an RPB endorsement, it might help researchers with funding from other entities. Consider talking with academic researchers on this?
- Need for regional scientists to be involved, provide input on priorities, etc.
- Capacity considerations include:
 - Get academic institutions, NERACOOS and Sea Grant Consortium involved in development and review.
- NOAA National Centers for Coastal Ocean Science volunteered assistance.

Comments on Compatibility Among Past, Current and Future Ocean Uses Goal

General Comments

- When using the term compatible, be careful with how we frame it in a way that is not limiting for future uses that may not be compatible.
- Note that information gathered in previous goals/projects will feed into much of the project work under this goal.

Objective 1

- Examine technological, management, economic, cultural, environmental.
- Incorporate tribal information regarding their past and current uses of ocean resources as well as goals for future use.
- This project is an opportunity to identify future ocean uses.
 - Consider targeted studies to highlight uses/compatibility (e.g., fishing and wind).
 - Robust compatibility assessment (e.g., European case studies on wind).
 - Studies of compatibility need to recognize site specific considerations.
 - Consider that much of this type of work is site-specific and that states through the Rhode Island Special Area Management Plan and Massachusetts plan have also done this type of work.

Objective 2

- Clarify issues related to siting transmission networks. Could lead to regional transmission plan. This is a topic that needs further discussion with concern that all interests be at the table moving forward. First step is to include in action the need to better define what the things are related to transmission that should be talked about (e.g., siting, grid connection) recognizing this is a regional ocean planning effort and related limitations.
- Suggested edits to consider in italics. “Convene regional stakeholders and experts to *facilitate information sharing on the status of transmission planning in the Northeast, with an emphasis on marine activities*. The purpose of this action will be to enhance the marine planning community's understanding of the *factors involved in transmission planning and where transmission activities might interface with the goals and objectives of the Northeast Regional Planning Body*.”

Public Comment on Draft
Northeast Regional Ocean
Planning Goals, Objectives,
and Actions

Public Comment on Draft Northeast Regional Ocean Planning Goals, Objectives, and Actions

October 2013 – January 2014

Introduction

This summary compiles public comment from October 2013 – January 2014 on [draft goals, objectives, and actions](#) for Northeast regional ocean planning. The Northeast Regional Planning Body (NE RPB), the entity charged with developing a regional plan for the Northeast United States under the National Ocean Policy, convened a series of public meetings throughout New England in the late spring-early summer of 2013 to discuss potential goals and objectives. Results of this public input informed the draft goals, objectives, and actions that were then issued for additional public comment in September 2013. From October through December 2013, the draft goals, objectives, and actions were the focus of stakeholder meetings in each New England state and were also made available on-line for electronic comment. These topics will be further discussed and commented on at the January 22-23, 2014 RPB meeting.

The summary begins with input received from public meetings held from October-December 2013 in each New England state. For each of these meetings, general comments are summarized first, followed by input specific to individual draft goals and objectives. Written comments submitted electronically to Northeast Regional Planning Body (NE RPB) co-leads follow the meeting summaries.

Comments Provided at State Stakeholder Meetings

Maine

Maine RPB members have established a Maine Advisors Group comprised of 30 people from a variety of ocean sectors (i.e., fishing, aquaculture, ports, recreation, tourism, conservation, watershed groups, ocean energy, municipal officials and academics.) The Advisors Group met on October 15, 2013 with 24 people attending. A second meeting scheduled for January 7, 2014 was cancelled due to predicted weather conditions. In addition to the feedback received at the October meeting, substantial feedback was collected from Maine's advisors through the use of an online survey.

General Comments

- There is a need to further define outcomes, the form a plan might take, who will use it and how. Lack of this level of specificity will affect stakeholders' interest in participating.
- The planning area should be clarified, both spatial and temporal and further refine "from out to three miles and up estuaries."
- It should be made clear that the actions in this document are interim steps along the way to directly addressing the goals and creating a plan.
- The document and subsequently the plan is focused primarily on offshore wind development and sand/gravel mining; it does not put enough emphasis on the protection and restoration of marine ecosystems, coastal communities, fishing, climate change including ocean acidification, decreases in zooplankton, etc. and dredging, nor does it address goals of a healthy marine-dependent economy and sustaining fisheries.
- The goals should be higher level goal statements reflecting a vision for the region's waters and marine-dependent communities (e.g., reducing the impacts of climate change is a goal, with ocean wind power as one objective.)
- There is no mention of coordination with other east coast RPBs.

Comments on Effective Decision-making Goal

Objective 1

- There is a need to clarify how a regional-scale plan can or will address decision-making on local issues, such as proposed projects.
- Evidence of commitment is needed on the part of federal agencies to use products resulting from ocean planning-related projects (e.g., natural resource and human use mapping-related work). An action should be added to clarify and obtain this commitment. Lack of commitment will affect interest of non-governmental stakeholders to participate.
- Other players besides government agencies can work together towards of improving efficiency and effectiveness. The objective should include ways to enhance coordination among communities, non-profits, and individuals to minimize redundancy and maximize data-sharing. There are many opportunities for improved coordination around existing ocean uses.
- Clarify if and how the plan will address areas where laws conflict.
- Add Coastal Zone Management Act to the list of key laws to be examined and to clarify states' role in federal waters.
- Efficiencies in decision-making should not short cut environmental reviews.

Objective 2

- Clarity and refinement of the audience being targeted here is needed. People and the public are too broad.

- Stakeholder engagement is the key to a successful planning process. Processes, timelines, relevant and accurate data, ways to participate, etc., must be made clear and readily available to stakeholders in order to effectively engage them throughout the planning and decision-making process. There were continued suggestions to form a standing regional stakeholder advisory group.

Objective 3

- Data on port traffic plans for cruise ships for 2014-2015 exists and should be added.
- Local data is important to decision-making and should be considered in a regional plan. An action to the effect of identify local data and add to portal is needed.
- Add an action related to improving the process for acquiring data to minimize multiple requests.
- Specificity is needed regarding how sensitive data will be protected.
- Clarity is needed regarding what data in the portal will be used in the plan and in decision-making.
- Data-sharing agreements that go beyond governmental agencies are needed.
- Concern was expressed about availability of funding to fill important data gaps.
- The planning process should create opportunities for stakeholders and scientists to work collaboratively on data collection/analysis.
- There continues to be concern that existing data represents a snapshot in time (e.g., fishing activity mapping occurred at time of low stocks with fewer fishermen fishing.)

Objective 4

- It is important that the Plan takes into account the customs, traditions, and values of all communities that are highly dependent upon the ocean, not just those of the tribes.
- Adding language that includes spiritual importance and adding a step to assess the sustainability of sustenance practices would improve the outcomes.

Comments on Healthy Ocean and Coastal Ecosystems Goal

- Be clearer that terms such as key topics and key activities as used in this goal are placeholders. The wording needs to be further refined so people understand what it means.
- Coastal land use and riverine data and associated issues should be addressed in the plan. Socio-economic data should be collected to predict how changes in the ocean will affect communities. Working waterfronts are an important part of regional characterization and there should be an explicit emphasis on marine-dependent communities.
- There is lack of clarity about the purpose for characterizing Northeast waters. Questions like “what do we hope to learn?”, “what questions are we asking of this data?”, “what decisions do we want the characterization help us make?” should be answered upfront.
- A characterization of wildlife should be included.

Objective 1

- Accurate and complete baseline data are imperative for good decision-making. Inadequacies or absence of baseline data must be identified and then research should be conducted to fill those gaps or update existing data before any management or siting decisions are made. Limitations of data due to temporal shifts in ecosystems need to be recognized and accounted for. High quality data from other non-governmental sources should be incorporated into the data portal.

Objective 3

- The scale of the data available and the ability to use that data to inform project decisions is mismatched. Data should be collected at the scale and resolution necessary to meaningfully inform project decisions.

Comments on Compatibility Among Uses Goal

Objective 1

- There is skepticism surrounding the potential accuracy and usefulness of maps depicting future uses and skepticism about the ability to do cumulative impact analysis, although there was recognition that it is needed. Identifying existing and future uses is different than analyzing the effects of those uses. National Environmental Protection Act has not proven to be an effective vehicle for cumulative impact analysis.
- There is a lack of consideration for past and existing uses throughout the document and especially within this objective.

Objective 2

- There is a need for clarity regarding the meaning of "...projects that could benefit from a regional perspective"; examples should be included.

New Hampshire

New Hampshire RPB members used a December 18 Division of Ports and Harbors Advisory Council meeting to provide Council members and the public with regional ocean planning updates and to gather input on goals, objectives, and actions. Seven Council members attended along with two members from nonprofit organizations.

General Comments

- Clarification was requested about the intent of the planning effort and whether the National Ocean Policy has regulatory implications.

- Commercial fishing representatives asked for greater transparency and involvement in product development.
- A dedicated New Hampshire stakeholder advisory group to ground truth data, provide input, and help guide state RPB members in decision-making and products is needed. The coastal community, state Advisory Council on Marine Fisheries, recreational boaters, and conservation organizations need to be engaged beyond the New Hampshire Port Advisory Council meetings. The New England Ocean Action Network (NEOAN) is also a forum to share views.

Comments on Effective Decision-making Goal

Objective 3

- The data collection process and products need more input and review (e.g., shipping, fishing, and recreational boating).
- The New Hampshire Director of Ports and Harbors can provide a commercial fishing taskforce report that includes extensive stakeholder input, information, and data from New Hampshire. The Director can also provide a report on the economic value of the Port of New Hampshire.

Massachusetts

Massachusetts RPB members held a meeting through the Massachusetts Ocean Advisory Commission (OAC) on October 30, 2013. The OAC is a 17-member commission including legislators, agency heads, representatives from a commercial fishing organization and an environmental organization, an expert in offshore renewable energy, and representatives from the coastal Regional Planning Agencies. Along with OAC members, six Massachusetts Science Advisory Council members and 15 public attended this meeting to hear updates and provide comment on regional ocean planning goals, objectives, and actions.

General Comments

- The development of a regional plan should be listed as an outcome.
- Including a preamble and description of goals may be useful when presenting this to audiences to enhance their understanding of the scope. Having clear milestones is also important for the public to see clearly what the RPB plans to attain.
- Establish a timeline for assessing progress.

Comments on Effective Decision-making Goal

Objective 1

- There is a need for decision processes to be streamlined - not only with federal agencies but with states and municipalities as well.

- Coordination of sectors such as security, transportation, and recreational uses is very important and should not be overlooked. Although more recent uses such as offshore wind and offshore aquaculture are important to consider as emerging uses, existing uses still need a focus.

Objective 3

- It is important that users be trained in data and mapping tools.

Comments on Healthy Ocean and Coastal Ecosystems Goal

Objective 1

- Move towards next steps beyond a baseline characterization (e.g. based on assessments and results, what will the RPB do to help with the identification of ecologically important areas and related decision-making process?). Depending on the data, maps, and analysis, the RPB should move forward to put these products to work.
- While protecting habitat is important to protect species, the importance of the temporal aspect for different life stages of certain species, especially migrating species, should not be overlooked.

Objective 2

- Include a socioeconomic component in this goal that will bring to bear the goal of the RPB to include the human component as a priority in healthy ocean ecosystem considerations and initiatives.
- Identify what nongovernmental groups are doing in this area and make sure the dots are connected.

Comments on Compatibility Among Uses Goal

Objective 2

- Develop a transmission plan with goals and outcomes. There needs to be a level of predictability for developers about where transmission cables will go (e.g. through designation of transmission corridors) and this is an issue of regional importance.

Rhode Island

Rhode Island RPB members notified the state's Ocean SAMP (Special Area Management Plan) stakeholder group of a meeting on December 19, 2013 for updates on Northeast regional ocean planning. Stakeholders in this group include representatives from the municipalities that abut the SAMP project boundary, the Narragansett Indian Tribe, fishermen's organizations, recreation and tourism interests, environmental organizations, marine trades, commercial interests, and other groups with a broad interest in the area. Eleven people from industry,

academia, fisheries, and nonprofit groups attended the December meeting to provide additional stakeholder comment on goals, objectives, and actions.

General comments

- The RPB should consider Atlantic States Marine Fisheries Commission representation; their participation is important considering changes in species distribution and abundance.
- No new regulations should not be highlighted as the most important principle.
- There are additional opportunities in all goals to better characterize existing uses and natural resources and determine how to use that information.
- The RPB should make it clearer that the goals and objectives reflect what is achievable in a two year timeframe.
- The RPB needs to set a better and clearer vision for what the ocean plan is going to look like.

Comments on Effective Decision-making Goal

Objective 1

- Be clear what decisions are being referred to in effective decision-making.
- In previous versions, this goal was broader and seemingly more comprehensive. The current version is more limited with the more refined drilling down into specific uses (e.g., energy, aquaculture, sand and gravel). There is concern about the focus being on these specific emerging uses and not existing uses and natural resources.

Comments on Healthy Ocean and Coastal Ecosystems Goal

Objective 1

- Identify important ecological areas; the National Ocean Policy identifies important ecological areas as an essential component of a marine spatial planning.
- Baseline information is too data poor; a process to establish baseline information based on good science is needed.
- Consider idea of having marine mammal observers on trawl surveys and on fishing boats as a way to use existing opportunities to collect new data.
- Input on fisheries mapping:
 - Need to have fishermen directly involved in methodology for identifying important fishing areas (especially for lobster), and need to make sure there is sub-regional representation on the team advising and doing the work. Research projects need to inform fishery management as well as planning.
 - Vessel Trip Reports and Vessel Monitoring System are accurate for large vessels, but not the smaller day boat fleet (i.e., less than 60') that fish closer to shore and in areas affected by new uses. Fishery maps were developed for the Rhode Island Ocean SAMP

- and submitted to Bureau of Ocean Energy Management that should be used in the regional process. Maps identify these areas that are important for each sector.
- The lobster fishery is bound by permits to specific areas that can be identified. This is a data gap that needs to be filled. BOEM is funding lobster background survey in Deepwater wind area; data will be useful for regional work too.
 - Need to consider the emerging Jonah crab and black sea bass fisheries as increasing in the region.
 - Need to reflect changes due to climate, including new research to quantify valuable crab resource areas.
 - Input on transmission projects:
 - Cable data development: Some of the cable data is secure and cannot be released, but a lot of it can be shared and it is up to the individual owners; Verizon can share their data.
 - Companies are interested in developing metadata and would like to see submarine cables included in the data portal in the same way as characterization of other industries. The International Cable Protection Committee (ICPC) provides recommendations and guidelines for submarine cables that should be considered in regulatory decision making. This includes the recommended spatial separation between different activities. ICPC recently completed guidelines related to offshore wind based on experience in Europe.
 - In referencing the importance of characterizing the submarine cable industry in this goal, consider the language from the Mid-Atlantic RPB Framework, on page 10, it states: "Facilitate greater understanding of the current and potential future location of submerged infrastructure, such as submarine cables (e.g., for communication and electricity) and pipelines."
 - Cable location: most cables going over to Europe land in New Jersey; there are also a lot of cables on Long Island. Not many cables are currently north of Long Island except the Hibernia system which lands in Massachusetts and a cable that comes into Rhode Island. Trans-Atlantic cables carry 98% of the "voice" and data over the ocean; satellite isn't used that much.

Comments on Compatibility Among Uses Goal

- This goal should include more specificity about assessing compatibility of uses; it does not go far enough.
- We need to consider that just because a use starts out as compatible may not mean it is compatible in the long term. Consider a marine accident or terrorism; either might close areas that were previously open.

Connecticut

Connecticut RPB members held a meeting in conjunction with a December 18, 2013. Connecticut Maritime Commission meeting to provide an update on NE regional ocean

planning. The Connecticut Maritime Commission is the primary body within the State of Connecticut to develop and recommend maritime policy to the Governor and the General Assembly. Approximately 20 people attended this meeting including members of the Commission, federal and state agency staff, industry representatives, nonprofit organizations, and the public to provide comment on goals, objectives, and actions. Additional comments provided from stakeholders interested in Long Island Sound via conference call are also captured in the summary below.

General comments

- The RPB needs to articulate what its role will be beyond the next two years and how planning will continue to progress past this timeframe.

Comments on Effective Decision-making Goal

- This effort is a good opportunity to work with industry to characterize areas used and are likely to use in the future based on emerging uses.
- Characterization of tribal input will be important in this (and other) goal areas.

Comments on Healthy Ocean and Coastal Ecosystems Goal

- Information from Long Island Sound seafloor mapping and Dredge Material Management Plan projects are producing high resolution data that can be incorporated into the regional planning process. Other efforts in Long Island Sound from a habitat/natural resource perspective are at such high level resolution that it will be hard to replicate at a regional scale.
- While it is understandable that regulatory agencies want a consistent information base to make management decisions, it is important for the RPB to consider going beyond baseline characterization and consider doing vulnerability assessments and identification of ecological areas. RPB needs to agree on a timeline for these decisions in next year.
- Important to identify a geographic boundary for the effort. Understand that most activity occurs and data exists in 30-40 miles offshore but it is also important for this effort to gather as much information as possible out to 200 miles.
- The information being collected on human use and economics brings up the importance of social science in this process. Need to understand human perceptions of information and assumptions that are made. For example, there is an assumption that planning will reduce conflicts, but when competing uses are considered, conflicts are not about data but on values associated with the data. Have the science plan articulate the importance of social science data and how perceptions can shape behavior of norms attitudes and behavior. Social science can help in understanding what people are willing to support and not support (e.g., maximize ocean uses and protection at the same time.)

- Sea Grant has projects looking at how social science connections need to be made with natural sciences.
- A sub-regional focus on Long Island Sound is important to consider. There will be more details and data at the sub-regional level. Important to continue discussion of creating a sub-regional focus of the data portal; concerns of capacity of how manage data.

Comments on Compatibility Among Uses Goal

- The RPB needs to articulate how it will use spatial data. For example, is the RPB the entity that will make decisions or will the individual agencies through their own mechanisms use the information to make better decisions? It is important to describe how a synthesis of data products will lead to an analysis of use and compatibility.

Comments Submitted Electronically

From October through December 2013, the draft goals, objectives, and actions were made available on-line for electronic comment. Comments submitted to NE RPB co-leads follow in chronological order from the date they were received.

November 11, 2013

Les Kaufman, Professor of Biology, Boston University Marine Program and Marine Conservation Fellow

While I look forward to offering comments on the document as part of the period of general public comment, there remains considerable uncertainty about how, if it all, the RPB would like to make use of the work conducted both collaboratively and in parallel, by the three teams that have applied themselves over the past three or four years to develop a science for understanding, visualizing, and forecasting coastal ecosystem service flows and tradeoffs related to ocean planning options. These three teams include my team based at BU (the "MIMES" team), our colleagues at UCSB (Crow and Ben, copied here, the ESTA team), and the Invest team (Mary copied here).

The national capacity for analysis of ocean use tradeoffs in support of ocean planning is vested largely in these three teams. While many other terrific things have been accomplished without having to make extensive use of particularly sophisticated science or models (as communicated, for example, in the movie "Ocean Frontiers II") there doesn't seem to be any plan to engage our full capacity in a systematic, prospective manner, despite the fact that this could produce substantial benefits. It is 3.3 Public Comment on Draft Northeast Regional Ocean Planning Goals, Objectives, and Actions admittedly a challenge to do so because it is quite a feat to synchronize the necessary human resources and funding with the actual need. Speaking just for the MIMES team, however, we've been working very hard to keep our team together and operational in anticipation of applying what we've learned right here at home. Doing so has begun to stretch us out because it has required taking on projects in distant locales (currently

Cambodia). While I readily confess to having fallen in love with the Cambodian people and cuisine (and of course all of the fishes), this is not how we originally planned for things to go.

Would it be possible, together, to at least imagine how, when, and even if ocean planning in the US...and particularly in New England, is *ever* (as in, during our careers!) likely to include an attempt to maximize net benefits, or project options for the range and distribution of these benefits, beyond the immediate outcomes that can be achieved via stakeholders looking at short-term spatial harmonies using simple maps pinned to the wall? Or, is it more likely that we will be spending the next couple of decades simply replicating the process developed in New England in other regions of the country? The advantage of just repeating our success over and over again is that the way we've done it is very simple, requiring only mapping and stakeholder engagement, without any new science or scenario projections beyond that which is immediate and fairly obvious.

The disadvantage is that the solutions achieved in this way are not likely to be particularly lasting, nor up to the more challenging tasks such as harmonizing resource extraction with wildlife protection.

November 23, 2013

Richard Nelson, Captain F/V Pescadero

You might say this is a letter to express my pre-comment concerns on the RPB's Draft Goals John emailed out recently. Concerned puts it rather mildly as there is a little shock and dismay in there also. First let me say that I've held these in check, wondering perhaps if I was being a little too critical or missing something, but over the last few days I've had a chance to discuss it with other colleagues (Island Institute and a NEOAN call on the subject) and have heard it as a concern of others as well, including those more conservative than I. This once mild mannered and openly worded Goals document seems to have been transformed into, not only a reversal of the goal-objective sequence, but a pronouncement of a major listing of agendas that gets repeated over and over again (five times) throughout its pages. We now seem to be in the business of enhancing the development of "Marine energy production, infrastructure, off shore aquaculture, and sand extraction for beach nourishment." Where have these agenda items come from? Probably not from public meetings, and where is the often talked about transparency? A great part of the reasons I support this process stems from a dissatisfaction with agencies such as BOEM, and wanting this to be a clear and reasonable alternative for decisions about ocean uses, not to be conjoined with them (BOEM) or be their data collectors. I also think this document reverses the order of things, putting this type of action ahead of its' goal (and at times not related to the goal.) When I think goals, I think in terms such as; reducing and combating ocean warming and acidification, while at the same time reducing the reliance on fossil fuels-with a subsequent action item being; supporting the development of renewable ocean energy. This order of stating it, still allows for us to track the outcomes of these projects; are they showing some success towards the goals, or are they meeting ecological criteria etc.? I could delve into many more of my thoughts here, and that of my colleagues, many having to do with a lack of strength and specific actions in the Ocean Health section, but that will come later, I'm

sure. That brings me back to the gist of this letter, which is that I'm afraid that without a lot of work or revisions to the goals document, the upcoming meeting may break down into a battleground as opposed to being a productive leap forward. Taking these first steps and getting off to a good start can be difficult, but extremely important and hopefully worth the efforts involved.

Thanks for your attention

December 4, 2013

Michael Tuttle, Manager, Marine Services Division, HRA Gray & Pape, LLC

I recently read the draft document produced by NROC and RPB dated October 23, 2013. I immediately reread it as during my first reading I did not see an affirmative declaration for the conservation or protection of submerged cultural resources. Submerged cultural properties and materials may range from inundated habitation sites to historic shipwrecks. As federal regulations, such as Section 106 of the NHPA of 1966, as amended, is interpreted these resources should be protected or at the very least considered during federal agency activities. If such a statement was in the document can you please point me to that section?

If not, I respectfully suggest some form of positive statement in regard to the conservation and protection of these limited and non-renewable resources be inserted. I attended the April 2013 public meeting at the Village Inn in Narragansett, RI and made a statement in support of the protection of our collective submerged and coastal cultural heritage.

Otherwise, I am in full support of the goals of intelligent, regional planning to aid in preserving and protecting our regional marine resources while at the same time allowing for sustainable resource utilization.

Thank you for your time and consideration

Ms. Betsy Nicholson
Federal Co-Lead for the Northeast Regional Planning Body
National Oceanic and Atmospheric Administration
Northeast Regional Office
55 Great Republic Drive
Gloucester, Massachusetts 01930

Submitted electronically to klund@northeastoceancouncil.org

Dear Ms. Nicholson,

On behalf of the Natural Resources Defense Council (NRDC) and our more than 1.3 million members and online activists – over 33,000 of whom live in the Northeast – thank you and the other members of the Northeast Regional Planning Body (Northeast RPB or RPB) for your work to develop a collaborative ocean plan that will guide the region's use and enjoyment of our marine resources for this and future generations. We are concerned, however, that the revised goals and objectives¹ which will be addressed and approved at the RPB's upcoming meeting no longer emphasize the need for protection of the ocean's important ecological functions. NRDC strongly urges you to restore language calling for the RPB to safeguard healthy ocean and coastal resources and clarify that only *sustainable* development will be advanced in order to ensure the long-term well-being, prosperity and security of our ocean and coastal resources.

As detailed in NRDC's previous comments,² only healthy ocean and coasts³ can continue to provide the food, jobs and recreation we want and need. Ocean sectors, such as tourism, recreation and fishing, contributed over \$13.5 billion to the region's gross domestic product and tourism and recreation alone support more than 150,000 jobs; these significant economic contributions rely on

¹ Available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

² This letter builds on the letter NRDC submitted to the RPB on July 26, 2013.

³ A healthy marine ecosystem is one that is able to support and maintain patterns, important processes and productive, sustainable and resilient communities of organisms, having a species composition, diversity and functional organization resulting from the natural habitat of the region, such that it is capable of supporting a variety of activities and providing a complete range of ecological benefits.

clean coastal waters and beaches and healthy and abundant fish and wildlife.⁴ These economic indicators only underscore the wealth generated from our ocean – many ecosystem services such as storm surge protection are often unaccounted for. Yet, despite the importance of a healthy ocean to our livelihood and way of life, the region’s marine waters and wildlife are often taken for granted. Ocean and coastal resources currently face a host of threats, from pollution to destruction of productive marine habitats, from climate change to ocean acidification, while simultaneously being busier than ever, with, for example, offshore wind beginning to take off and an anticipated increase in shipping offering new opportunities and challenges. The economic web that our ocean life supports is vulnerable under the weight of these problems and uses; we need to take action to secure our ocean and coasts’ ability to support our many needs.

The RPB is well situated to help ensure the continued functioning of these resources and NRDC’s encouragement and support for the Northeast RPB stems from the understanding that this process will lead to improved ocean health and sustainable ocean use. Executive Order 13547 (Executive Order), from which the regional planning bodies derive their authority, calls for action to help “protect, maintain, and restore the health and biological diversity of ocean, coastal, and Great Lakes ecosystems and resources”; “improve the resiliency of ocean, coastal, and Great Lakes ecosystems, communities, and economies”; and “bolster the conservation and sustainable uses of land in ways that will improve the health of ocean, coastal, and Great Lakes ecosystems”.⁵ The *Final Recommendations of the Interagency Ocean Policy Task Force* (Final Recommendations) further states:

*[Coastal and marine spatial planning or CMSP] is intended to improve ecosystem health and services by planning human uses in concert with the conservation of important ecological areas, such as areas of high productivity and biological diversity; areas and key species that are critical to ecosystem function and resiliency; areas of spawning, breeding, and feeding; areas of rare or functionally vulnerable marine resources; and migratory corridors. Enhanced ecosystem services and benefits can be attained through CMSP because they are centrally incorporated into the CMS Plan as desired outcomes of the process and not just evaluated in the context of individual Federal or State agency action. CMSP allows for a comprehensive look at multiple sector demands which would provide a more complete evaluation of cumulative effects. This ultimately is intended to result in protection of areas that are essential for the resiliency and maintenance of healthy ecosystem services and biological diversity, and to maximize the ability of marine resources to continue to support a wide variety of human uses.*⁶

It is clear that protection and enhancement of ocean health should be identified as desired outcomes of the RPB’s work.

⁴ National Oceanic and Atmospheric Administration. Economics: National Ocean Watch. Data Wizard. Northeast, 2010. Available at <http://www.csc.noaa.gov/ENOWDataWizard/index.jsp?RegionList=-5&vYears=2010>.

⁵ The White House. Office of the Press Secretary. July 19, 2010. Executive Order 13547. Available at <http://www.whitehouse.gov/the-press-office/executive-order-stewardship-ocean-our-coasts-and-great-lakes>.

⁶ The White House Council on Environmental Quality. July 19, 2010. *Final Recommendations of The Interagency Ocean Policy Task Force* at 44. Available at http://www.whitehouse.gov/files/documents/OPTF_FinalRecs.pdf. Emphasis added.

Unfortunately, this latest version of the Northeast RPB’s draft goals focuses more heavily on enhancing interagency coordination for the purposes of ocean development; ecological protection is not granted the prioritization that it needs. The effective decision making goal – the first one noted in the revised goals document – is centered on coordination to help advance ocean industry, such as marine energy, infrastructure and sand extraction, with no attention paid to ocean functioning and non-consumptive uses like boating and surfing. Moreover, the current healthy ocean and coastal ecosystems goal which follows only states the need in Action 1-3 to “Assess and summarize efforts in the region that have attempted to identify areas of ecological ‘importance’ or measure the ‘health’ of the marine system” – it does not require the RPB to develop its own analysis and identification of key places in order to guide decision-making or require that ecologically important areas be protected. The related Action 1-6 calls for a baseline assessment of the natural resources, but does not attempt to gauge health or require ecological protection. Action 1-7, which calls for review of the vulnerability of marine life/ habitats to human activities, is not clearly tied back into the assessment and does not call for steps to be taken to address individual or cumulative impacts that put undue pressure on the resources.

The lack of attention paid to ocean health and resilience stands in contrast to the emphasis on fostering ocean industry siting and development. The healthy ocean and coastal ecosystems goal Action 2-1 encourages RPB members only to “*Identify* existing as well as potential programs that are or would be directly related to conservation, restoration, and maintaining healthy ocean and coastal ecosystems at a federal and state level. *Identify opportunities* for better coordinating and supporting those programs to address priority regional ocean planning needs”, but does not ensure that identification and protection of areas key to continued ecological functioning will occur.⁷ Compare this to the attention given to marine industry in the first goal related to decision making, specifically in Actions 1-2, “*Pursue* opportunities for coordinating with the BOEM leasing program for offshore wind development ...”, and 1-3, “Identify specific opportunities to enhance inter-agency coordination for marine energy production, infrastructure, offshore aquaculture, and sand extraction ... Include NEPA and development-specific regulatory programs in this action. *Recognizing that there may be obstacles to this action, also identify obstacles to achieving these opportunities and specific, concrete steps toward addressing these obstacles...*”⁸

Critically, nor does the goals document call for *sustainable use*, the capacity of an ecosystem to endure and remain diverse and productive over time without diminished quality of life due to degradation of human or environmental health or adverse effects on social conditions.⁹ Executive Order 13547 itself states that “coastal and marine spatial planning provides a public policy process for society to better determine how the ocean, our coasts, and Great Lakes are sustainably used and protected – now and for future generations.”¹⁰ It not enough to simply examine the compatibility of ocean uses with each other as is called for by the document’s third goal; proposed uses also must be

⁷ Emphasis added.

⁸ Emphasis added.

⁹ The World Commission on Environment and Development in 1987 defined sustainability as the ability to “meet the needs of the present without compromising the ability of future generations to meet their own needs.”

¹⁰ The White House. Office of the Press Secretary. July 19, 2010. Executive Order 13547. Available at <http://www.whitehouse.gov/the-press-office/executive-order-stewardship-ocean-our-coasts-and-great-lakes>.

compatible with the underlying ecosystem. Federal agencies and states and tribes should fulfill the Executive Order and Final Recommendations' intent and revise the document to call for steps that will safeguard the areas and ecosystem processes important for spawning, breeding, feeding and migrating ocean fish and wildlife and ensure that the various impacts of ocean uses – alone and in concert – do not threaten the natural system's health or the variety of uses (*e.g.*, surfing, boating, fishing, paddling, bird watching) that rely on these resources.

NRDC urges the RPB to restore the former healthy ocean and coastal ecosystems goal to:

Develop a planning framework to protect, restore, and maintain healthy ocean and coastal ecosystems that provide social, cultural, spiritual, and economic benefits. Account for changing environmental conditions and new information as it becomes available. Respect the intrinsic value of the ocean, its biodiversity, and act as its steward/caretaker, recognizing humans as part of the ecosystem.¹¹

This description varies from the objectives in the current document, for example, “Characteriz[ing] the region's ecosystem and economy”, “support[ing] existing non-regulatory opportunities to work toward conserving, restoring and maintaining healthy ecosystems”, and “Periodically assess[ing] process toward achieving this goal and Objectives 1-3.” Instead, the former goal solidifies a commitment on behalf of the RPB to secure the continued functioning of fundamental ecological processes, to protect and preserve resource access for sustainable uses, and to respect the traditional customs of indigenous people – another topic given inexplicably short shrift in the revised document. This restored goal should retain the baseline assessment action noted under the current healthy ocean and coastal ecosystems goal; however, the assessment should evolve beyond what appears to be a static snapshot of the system – a “where to site” guide for industry – and instead be used to advise and serve the members of the public and existing users who wish to enhance the health of our ecological resources and secure their continued access to and enjoyment of them. The assessment should identify and protect important ecological functions, areas and wildlife in order to ensure the system's resilience, and an action should be added to develop a series of ecological indicators and regularly assess the natural system's baseline health to better understand changing environmental conditions and the impacts from increased human activities. Further, the RPB should not limit itself to pursuit of non-regulatory opportunities to advance conservation – members should use their existing authorities to protect ocean waters and wildlife.

NRDC also requests that a regional stakeholder advisory panel and a science advisory panel be additional public input methods found under the effective decision making goal. As previously communicated, we recommend that the RPB appoint a regional stakeholder advisory panel made up of representatives from traditional, current and emerging ocean uses in New England to provide regular input and advice to the RPB and solicit feedback from stakeholders. A regional stakeholder panel would help achieve the objectives called for as part of the compatibility among past, current and future ocean uses goal. The RPB's existing stakeholder system of state-by-state stakeholder outreach may be helpful in determining each state's views but cannot substitute for the value of

¹¹ “Draft Goals for Northeast Regional Ocean Planning.” May 2013. Available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

having representatives come together from across the region to share their views firsthand and work together toward resolution of conflicts. We also urge you to establish a science advisory panel comprised of academics and subject-matter experts working throughout the region to advise the RPB on technical matters and to provide advice at all stages of the planning process. This panel would be a more formalized way of engaging with the scientific and academic community in developing a baseline ecosystem assessment and for creating the regional ocean science plan called for in objective 3 of the healthy ocean and coastal ecosystems goal.

Thank you for your consideration of these recommendations. The importance of your work cannot be overstated – regional planning bodies offer a revolutionary new engagement mechanism for stakeholders and the public to engage in management decisions that affect their lives and livelihoods. We urge you to ensure that protection of ecosystem health is restored to the document in order to ensure that these resources can be enjoyed far into the future. We appreciate your dedication to this effort and look forward to reviewing the final goals.

Sincerely,

A handwritten signature in cursive script, appearing to read 'Ali Chase', written in dark ink.

Natural Resources Defense Council

January 6, 2014

To the Northeast Regional Planning Body:

On behalf of Surfrider Foundation, our more than 250,000 supporters and our vast activist network of Northeast volunteers, thank you for the opportunity to comment on the revised set of draft goals for Northeast Regional Ocean Planning.

Surfrider Foundation believes that Healthy Ocean and Coastal Ecosystems should be the overarching goal of the Northeast Regional Ocean Planning Process. Ecosystem protection is the primary goal of the National Ocean Policy and a core element of marine spatial planning as defined and practiced throughout the U.S. and beyond.¹ The Northeast region depends on a healthy marine ecosystem for economic, social, cultural, ecological, and spiritual values. As such, we suggest you prioritize Healthy Ocean and Coastal Ecosystems above the other draft goals.

Surfrider Foundation supports the four objectives under Healthy Ocean & Coastal Ecosystems. In particular, we support a robust characterization of the region's species, habitats, cultural resources, and existing human activities and economy. However, we believe that stronger actions to protect and restore the environment are needed; with the advent of new and expanding industries that may damage the marine ecosystem, additional protective actions will be necessary to effectively embrace the goal of a healthy ocean & coastal ecosystems. Accordingly, we suggest adding an objective to develop ecological protection areas and standards as part of the regional plan, to address future development proposals and cumulative impacts.

Surfrider Foundation also recommends reinsertion of the descriptive goal language that was included in the original draft document but removed from the revised version. This language is crucial to defining the intent and purpose of the goals.

Surfrider Foundation is concerned that the revised draft goals fail to prioritize the protection of sustainable uses over potential new uses. Existing uses such as recreation, tourism, and cultural heritage provide major economic and social benefits to coastal communities and the region as a whole. Yet, the Effective Decision Making and Compatibility Among Past, Current, and Future Ocean Uses goals suggest that potential new uses may be afforded equal consideration in assessing compatibility. Surfrider

¹ Ecosystem protection is the core element of ocean planning goals in other regions, including Washington State (http://www.msp.wa.gov/wp-content/uploads/2013/07/MSP_scoping_document.pdf#8) and Oregon (oregonstate.edu/leadership/sites/default/files/provost-documents/Marine-Council/klarin-cmsp-workshop-2011.pdf#5).

recommends the goals be modified to explicitly prioritize non-consumptive recreation and other sustainable uses. We further recommend that an additional action be added to assess the sustainability of existing uses, so that ocean planning priorities may be set in accordance with the Healthy Ocean and Coastal Ecosystems goal.

Surfrider Foundation appreciates the added attention afforded to recognizing and filling data gaps. The Northeast Ocean Data Portal provides excellent information on a variety of regional ocean uses but does not include data on non-motorized/non-consumptive recreational use. Ocean and coastal recreation encompasses a broad spectrum of human uses such as surfing, beach going, kayaking, diving, wildlife viewing, kite boarding and swimming. These activities are geographically and seasonally ubiquitous along New England's coast and are enjoyed annually by millions of residents and visitors. These uses also provide major economic and social benefits to the Northeast region. Filling the current data gap to include this scientific information regarding non-motorized/non-extractive ocean recreation is critical to the success and legitimacy of the planning process.

With regard to the formation of advisory groups, Surfrider Foundation holds that identifying a formal regional mechanism to solicit regular, proactive input and recommendations, as well as to respond to and solicit feedback from stakeholders is *critical* to the RPB's success. Surfrider is appreciative of the attention that state members have dedicated to this vital component of the body's work within their own states; however, we urge the RPB to follow the Inclusiveness and Accessibility guidelines set forth by the National Ocean Council Marine Planning Handbook, which call for inclusion of **"the full range of interests in national and regional coastal and ocean planning."**² Non-consumptive ocean recreation users should be included in all ROP advisory groups. In reviewing the state advisory groups formed to date, the invited parties are heavily stacked toward commercial and fishing uses. Surfrider requests that RPB members actively seek to include a wider swath of representation from across the spectrum of ocean stakeholders.

While state advisory groups are likely to provide valuable stakeholder input to help inform state interests in ROP, they should not serve as a substitute for a regional stakeholder body. Surfrider Foundation again calls for the formation of a regional advisory committee, in line with our previous public comments and the recommendations of the New England Ocean Action Network:

² National Ocean Council Marine Planning Handbook, available online at http://www.whitehouse.gov/sites/default/files/final_marine_planning_handbook.pdf (page 9).

Appoint a Regional Stakeholder Advisory Panel, which consists of diverse representation from the range of traditional, current and nascent ocean user groups in New England. We do not believe that utilizing existing state advisory panels is an appropriate way to encourage a crosscutting regional dialogue about a large, regional planning area. State by state advisory committees can be engaged at the discretion of individual states, but we believe strongly that the RPB should create and engage its own regional advisory panel.

Surfrider Foundation believes that continuing to improve the public engagement process will aid in the effectiveness of the RPB's decision making. Advanced and well circulated notice for meetings, clear expectations for public input, deadlines for comments, an easily navigable and digestible website, and diversification of communication platforms and formats are needed to facilitate public input. Working to better define the public process for ROP participation and clearly articulating how public input will be considered and potentially integrated into the plan are also essential next steps.

Finally, Surfrider Foundation would like to see specific actions included in the goals for setting the plan in motion. Creating a plan that will matriculate into use is the ultimate goal of the ROP process, and as such, a clearly articulated action plan needs to be established, defining the steps to follow the final plan. Clarifying specific actions for applying data to the decision framework will assist in moving plan outcomes beyond review and assessment.

We have a great opportunity through ROP to protect the ocean ecosystem, ecological hotspots and recreational areas, before they're threatened. Surfrider Foundation appreciates being part of the formative process in the Northeast and we thank RPB and NROC members for the tremendous contributions of time and energy in developing these draft goals, considering and integrating public input, and advancing the ROP process in the Northeast.

Sincerely,

RE: Comments on the Draft Goals, Objectives and Actions for Regional Ocean Planning in the Northeast

Dear Ms. Nicholson, Mr. Fugate and Chief Getchell:

On behalf of the Conservation Law Foundation (CLF), I am pleased to provide comments to the Northeast Regional Planning Body (NE RPB) regarding its October 23, 2013 *Draft Goals, Objectives and Actions for Regional Ocean Planning in the Northeast*. CLF supports the development of a comprehensive, ecosystem-based regional ocean plan as the primary mechanism for implementing the goals and priorities of the *National Ocean Policy*¹ and the

¹ Executive Order 13547, Stewardship of the Ocean, Our Coasts and the Great Lakes. Fed. Reg. 43023. Thursday, July 22, 2010.

*Final Recommendations of the Interagency Ocean Policy Task Force*². Ultimately, the goal of the *National Ocean Policy* and any consequent regional ocean plan is to ensure that New Englanders, and the nation, can capitalize on all that our ocean has to offer now and in the future. We rely on the ocean for food production, transportation, clean renewable wind, wave and tidal energy, recreation, our cultural heritage and jobs. As the ocean is the source of this tremendous wealth of goods and services upon which we depend, protecting, restoring and maintain the health of the ocean is paramount. We must therefore be committed to striking the right balance between promoting sustainable use of ocean resources and ensuring that New England's ocean ecosystem, including its wildlife and habitats, is healthy and thriving. New England's ocean ecosystem also provides numerous ecosystem services that are not valued in the market place including its role in capturing carbon, producing oxygen and regulating our climate. A comprehensive ocean plan should acknowledge the value of these ecosystem services.

CLF provides these comments in addition to the oral comments that we provided in October at the New England Regional Ocean Planning Maine Advisors Group meeting and in December at both the Rhode Island's public workshop and the meeting of the Massachusetts Ocean Advisory Commission. We note that the goals and objectives document that was discussed at the Maine meeting was a condensed summary of October 23rd *Draft Goals, Objectives and Actions* document and did not provide many important details. CLF also attended the December meeting of the New Hampshire Port Advisory Council where, we note that, while there was a discussion of ocean planning in general there was no discussion of the *Draft Goals, Objectives and Action*.

Draft Goals, Objectives and Actions

The Draft Goals, Objectives and Actions lacks the summary descriptions of the goals that were approved at the NE RPB's April 2013 meeting and that CLF strongly supports -- as written in *Draft Goals for Northeast Regional Ocean Planning* (May 2013). The May 2013 narrative for each goal included in italics below provides important context for the objectives and actions that follow and ought to be included in any written or oral presentation of draft goals, objectives and actions. Our comments on the *Draft Goals, Objectives and Actions* are as follows:

² White House Council on Environmental Quality, *Final Recommendations of the Interagency Ocean Policy Task Force* (July 19, 2010), available at http://www.whitehouse.gov/files/documents/OPTF_FinalRecs.pdf.

Goal: Effective Decision Making

Improve management effectiveness, intergovernmental decision making, engagement, collaboration, and integration of best available knowledge. Reflect ever changing social, environmental, and technological conditions.

- **Objective 1 - Enhance inter-agency coordination:** CLF is concerned to see language that significantly narrows the RPB’s focus regarding inter-agency coordination. Rather than signaling a comprehensive approach to regional ocean planning, as envisioned by the *National Ocean Policy*, the objective as currently worded would limit the focus of the Northeast regional ocean plan to a narrowly prescribed set of ocean uses; specifically, energy production, infrastructure (transmission cables and pipelines), offshore aquaculture, sand and gravel extraction, and other potential *future* uses (e.g. carbon sequestration). Broad interagency coordination is critical if existing and future ocean uses are to be effectively coordinated, including uses that are widespread across the ocean planning region such as commercial and recreational fishing, recreational boating and scientific research. CLF believes that the language in Objective 1 represents an unnecessary narrowing of the application of the regional ocean plan and results in the exclusion of many other uses from an objective that seeks to enhance inter-agency coordination. We strongly recommend that all ocean uses be included in this objective, recognizing that the RPB in this first generation of the regional ocean plan may need to prioritize specific issues. At the very the least the language should be amended so that it is clear that this objective is not limited to only the listed activities above. Action 1-1 should also be redrafted to include a review of federal and state statutory requirements for regulating the siting of any ocean use in the ocean planning area. Likewise, Action 1-3 should be broader to identify specific opportunities to enhance interagency coordination for all ocean uses. Such a fundamental action should be a foundational element of any ocean plan and again should not be limited to a selective subset of ocean uses. Action 1-2 should include stakeholder engagement, current ocean use, and important ecological areas of ocean wildlife and habitat as focal topics for coordination with the Bureau of Ocean Energy Management (BOEM).
- **Objective 2 -- Implement specific actions to enhance informed public input in decision-making:** Similar to our comments on Objective 1, CLF believes that promoting opportunities for public input is critical to any informed decision-making process. Affected stakeholders should have clearly defined opportunities to engage in policy discussions addressing specific ocean use. Having a plan for providing opportunities for and managing public engagement should be a foundational element of any ocean plan

(see comments on stakeholder engagement below). There is no justification for limiting these important actions to the subset of ocean uses listed under Objective 1.

- Objective 3 – Incorporate maps and other products into existing agency decision-making processes: This is one of the most important objectives of the regional ocean plan. Identifying data gaps and understanding and mapping existing data is essential to the ocean planning process and a fundamental component of any ocean plan. Devising ways for the maps and relevant data to be included in the plan so that it can be incorporated into agency decision-making will be critical to ocean plan implementation and effectiveness. To that end, Action 3-1 is particularly important and should be a focus in the regional planning process. CLF has significant legal and policy expertise that we look forward to sharing as the NE RPB considers mechanisms for incorporating the ocean plan into current state and federal decision-making processes.
- Objective 4 – Improve respect for the customs and traditions of indigenous peoples in decision-making processes. CLF strongly supports this objective and looks forward to commenting on more specific actions under this objective once they are developed.
- Objective 5 – Periodically assess process towards achieving this goal and Objectives 1-4: CLF strongly supports this objective and similar objectives under each goal to ensure that the regional ocean plan includes adaptive management measures to meet its goals and objectives.

Goal: Healthy Ocean and Coastal Ecosystems

Develop a planning framework to protect, restore, and maintain healthy ocean and coastal ecosystems that provide social, cultural, spiritual, and economic benefits. Account for changing environmental conditions and new information as it becomes available. Respect the intrinsic value of the ocean, its biodiversity, and act as its steward/caretaker, recognizing humans as part of the ecosystem.

The above narrative describing the Healthy Ocean and Coastal Ecosystems goal describes what should be the overarching goal and vision of the Northeast regional ocean plan – a framework to protect, restore and maintain healthy ocean and coastal ecosystems that provide social, cultural, spiritual and economic benefits, taking into account changing environmental conditions and our evolving understanding of our ocean ecosystem while respecting the intrinsic value of the ocean and its biodiversity. We strongly support this goal as worded above, but have serious concerns that the objectives and actions that follow are not sufficient to achieve this goal.

- Objective 1 -- Characterize the region's ecosystem and economy: Characterizing New England's ocean ecosystem and associated human uses is fundamental to the development of an effective ocean plan and we support the actions associated with compiling and mapping scientific and human use data and developing a detailed portrayal of the biological, physical, oceanographic and human use characteristics of the Northeast planning region. We also want to underscore the importance of considering and planning for the potential impacts of climate change to New England's ocean ecosystem as an element of the regional ocean plan. Action 1-3 proposes to study efforts to identify important ecological areas (IEAs) *or* measure the "health" of the ecosystem. Identifying IEAs and measuring the health of the ecosystem are two distinct areas of scientific study, and it is important to the ocean planning process that there be a baseline understanding of what has been done in the Northeast region on both topics. Therefore, the word, "or" should be replaced by the word "and."

In addition, Action 1-3 inexplicably falls short of taking the obvious next step with respect to IEAs, *i.e.*, to actually identify IEAs in the planning region and develop a decision-making framework that provides appropriate protection for them. The identification and protection of IEAs is a fundamental and critical step in any ocean planning process and is essential to achieving the goal of healthy ocean and coastal ecosystems. The Final Recommendations of the Interagency Ocean Policy Task Force on a Framework for Effective Coastal and Marine Spatial Planning (CMSP) specifically calls out IEAs as an essential component of a marine spatial plan:

*CMSP is intended to improve ecosystem health and services by planning human uses in concert with the conservation of important ecological areas, such as areas of high productivity and biological diversity; areas and key species that are critical to ecosystem function and resiliency; areas of spawning, breeding, and feeding; areas of rare or functionally vulnerable marine resources; and migratory corridors.*³

Essential Elements of Ocean Plan -- Regional Assessment: *The CMS Plan would include a regional assessment, based on environmental, social, economic, and other necessary data and knowledge, describing the existing and predicted future conditions, uses, and characteristics of the ocean, coastal, or Great Lakes areas covered in the CMS Plan. The regional assessment would include: relevant biological, chemical,*

³ Ibid., p. 44.

*ecological, physical, cultural, and historical characteristics of the planning area; **ecologically important or sensitive species/habitats/ecosystems**; and areas of human activities. The assessment would also include an analysis of ecological condition or health and of cumulative risks as well as forecasts and models of cumulative impacts. The regional assessment would explain the information obtained and analyses conducted during the planning process and how they were used to help determine management decisions and plan alternatives.⁴ (Emphasis added.)*

Therefore, the identification and protection of IEAs and measuring marine ecosystem health should be major priorities of the planning process. Action 1-3 should be re-drafted so that the work of measuring marine ecosystem health is an action distinct from the specific actions needed to identify and map important ecological areas in the Northeast ocean planning area. CLF recommends the following language change:

- Action 1-3. Assess and summarize efforts in the region that have attempted to identify areas of ecological importance. Based on this information and with additional input from the regional science community develop and apply an appropriate methodology to identify important ecological areas in the ocean planning area.
- Action 1-4. Assess and summarize efforts in the region that have attempted to measure the health of the marine ecosystem. Based on this information and with additional input from the regional science community develop a set of marine ecosystem health indices for regional ocean ecosystem with which to gauge the current health of the ecosystem and to inform the development and regular updating of the regional ocean plan and in particular its goal of Healthy Ocean and Coastal Ecosystems.

Similarly, Action 1-7 (review studies on vulnerability of marine life and habitats to human activities/cumulative impacts) fails to include the step of applying this information to the decision framework of the ocean plan. Action 1-7 should be re-drafted to include an action that would make recommendations on incorporating marine life and habitat vulnerability and cumulative impacts into decision making.

⁴ Ibid., p. 59.

Goal: Compatibility Among Past, Current and Future Ocean Uses

Develop a planning framework to encourage compatibility among past, current and future uses of ocean and coastal waters while minimizing user conflict and impacts to environmental and cultural resources. Recognize local priorities and the connection of ocean uses and the ecosystem to shoreside infrastructure and activities. Facilitate increased understanding and coordination among stakeholders, recognizing the difficulty of resolving certain conflicts.

The goal of compatibility among uses is an appropriate goal of comprehensive ocean planning, and CLF supports this goal as an important outcome of the Northeast regional ocean plan. However, the objectives and actions that follow this goal focus solely on studying potential future changes in human uses of the ocean environment versus actually assessing and affirmatively addressing and managing current and future *compatibility* among uses. Mapping patterns of human use in and of itself is not sufficient to assess and promote compatibility among uses. Compatibility considers how different activities interact, whether there are positive or negative consequences of those interactions and how those consequences can be mitigated and managed in a way that protect existing uses and plans for and enables new uses. We recommend that the NE RPB include appropriate actions that more directly address the compatibility goal and identify best management practices for promoting compatibility among uses.

The intent of Objective 2 regarding incorporating “regional issues” in ongoing efforts assessing human activities is confusing and appears to be focused on engaging current initiatives in the region. We believe that the regional planning process could benefit from other initiatives and processes now underway. For example, BOEM’s wind energy siting process is generating significant amounts of useful scientific data and other information about the ocean planning area, which could be incorporated into the regional planning process. This objective should be redrafted to focus on engaging current initiatives in a manner that advances the development of a regional ocean plan. In addition, it would be useful to specify what regional issues, other than offshore electricity transmission, are contemplated.

Stakeholder Engagement

CLF respectfully would like to also call your attention to the continued need for a formal and comprehensive public engagement process. More detailed recommendations can be found in the May 31, 2013 letter re: public participation submitted to the executive committee of the RPB by the New England Ocean Action Network of which CLF is a member. CLF would like to reinforce two of the proposals in that letter:

- Appointing a standing *Regional* Stakeholder Advisory Panel that consists of diverse representation from the range of traditional, current and nascent ocean user groups in

New England. We do not believe that relying upon existing state advisory panels is an appropriate, prudent or sufficient way to encourage regional dialogue about a large and diverse regional planning area. Reliance upon state-by-state advisory committees continues a siloed approach to ocean management that regional ocean planning should be designed to overcome. The state committees that have been engaged on regional ocean planning thus far vary significantly in their membership composition depending on the state and some committees such as the New Hampshire State Port Advisory Council are not broadly representative of all the relevant ocean planning stakeholders. Furthermore, the announcement of meetings and notification for public involvement has proven to be uneven among the various state bodies. The standards for notifying the public, accommodating public attendance and receiving and incorporating public and stakeholder comments and statements are not apparent in the RPB's use of separate state committees as advisory bodies. To be clear, we appreciate the opportunity for stakeholder dialogue that state advisory committees can provide, but we do not believe it is an adequate mechanism for ensuring stakeholder input in this regional dialogue. In addition to a Regional Advisory Body we urge the RPB to develop and implement common standards of announcement and notification for comment periods, public meetings and other public and stakeholder events.

- Creating and utilizing a standing Science Advisory Panel consisting of scientists from academic and government institutions across New England, as well as individuals or representatives of certain entities who have particular expertise in experiential, local or traditional knowledge. Such a Science Advisory Panel will ensure that the regional ocean plan is built upon the best available scientific data and understanding of New England's ocean, as well as help to increase credibility among the public and various ocean user groups regarding the ocean planning process.

CLF is pleased that New England has embarked on the nation's first ever regional ocean planning process and looks forward to the completion of the Northeast regional ocean plan. The NE RPB is now at a stage of maturation where a more fully developed and regular timeline for its regular public meetings, work sessions, outreach events and other activities is expected by stakeholders and the public who are accustomed to working in concert with other administrative bodies. Establishing an open and transparent public and stakeholder process along with a more regular and accessible RPB work schedule and timeline of actions will help to create the success that we all want to see in New England.

Thank you for this opportunity to comment on the NE RPB's *Draft Goals, Objectives and Actions*. As always, I and my CLF colleagues stand ready to assist in this important endeavor, and we look forward to the NE RPB's great accomplishments in 2014.

Sincerely,

Priscilla M. Brooks
VP and Director of Ocean Conservation

RE: Comments on Revised Draft Ocean Planning Goals, Objectives, and Actions

Dear Ms. Lund:

The National Ocean Policy Coalition (“Coalition”) is pleased to submit comments on the Northeast Regional Planning Body’s (“Northeast RPB”) revised draft regional ocean planning goals, objectives, actions, and outcomes. The Coalition is an organization of diverse interests representing sectors and entities that support tens of millions of jobs, contribute trillions of dollars to the U.S. economy, and seek to ensure that actions under the National Ocean Policy are implemented in a manner that best benefits the National interest, including protection of the commercial and recreational value of the oceans, marine-related natural resources, and terrestrial lands of the United States.

INTRODUCTION

Ocean and coastal policies play a critical role in our national, regional, and local economies, national security, culture, health, and well-being. The Coalition supports ocean and coastal policies that serve as mechanisms for job creation, infrastructure revitalization, and economic growth, conserve the natural resources and marine habitat of our ocean and coastal regions, and rely on full utilization of existing programs and well-established authorities that are already in place.

The comments herein supplement the Coalition’s June 2013 comments (see Appendix) on the Northeast RPB’s initial draft goals, actions, and outcomes that were released in May 2013.

A primary driver of the Coalition’s concerns regarding regional ocean planning efforts under the National Ocean Policy/RPB construct is the reality that, pursuant to the foundational National Ocean Policy/Northeast RPB documents, RPB plans or products are to be implemented by federal agencies to the maximum extent, including through regulations where necessary.¹ Regardless of whether the RPB

¹ See Executive Order for Stewardship of the Ocean, Our Coasts, and the Great Lakes, July 19, 2010, *available at* <http://www.whitehouse.gov/files/documents/2010stewardship-EO.pdf>, Section 6 (“All executive departments, agencies, and offices that are members of the [National Ocean] Council and any other executive department, agency, or office whose actions affect the ocean, our coasts, and the Great Lakes shall, to the fullest extent consistent with applicable law...[p]articipate in the process for coastal and marine spatial planning and comply with Council certified coastal and marine spatial plans, as described in the Final Recommendations and subsequent guidance from the Council.”); Final Recommendations of the Interagency Ocean Policy Task Force, July 19, 2010, *available at* http://www.whitehouse.gov/files/documents/OPTF_FinalRecs.pdf, Pages 47, (“Where pre-existing legal constraints, either procedural or substantive, are identified for any Federal agency, the NOC would work with the agency to evaluate necessary and appropriate legislative solutions or changes to regulations to address the constraints. In the interim, agencies would comply with existing legal requirements but

itself is a non-regulatory entity, its actions may thus have far-reaching consequences by serving as precursors to regulatory activity that ultimately impact federal agency discretion and decision-making. The inherent potential for uncertainty, confusion, delay, and adverse impacts to result from this non-statutorily based process underscores the critical need to reduce the likelihood of such an outcome.

The Coalition therefore reiterates the critical importance of establishing a formal role for commercial and recreational user groups (including but not limited to the creation of a formal advisory committee under the Federal Advisory Committee Act) before the Northeast RPB takes any further action. For the reasons stated above, the activities of the RPB should be held to stakeholder processes and standards at least as rigorous as those accorded to statutorily-authorized ocean use planning processes. A clear, transparent, and inclusive process would significantly decrease the likelihood of ill-informed actions that unnecessarily constrain commercial and recreational activity in the Northeast.

In addition, it is vital that any work plan that emanates from the development of Northeast regional ocean planning goals, objectives, actions, and outcomes be subject to a sufficient opportunity for public review and comment and user group engagement before its finalization.

Lastly, many of the nation's existing laws aim to promote economic activity and resource development,² and the National Ocean Policy Implementation Plan itself cites the promotion of economic growth as a

should endeavor, to the maximum extent possible, to integrate their actions with those of other partners to a CMS Plan."); 61-62 ("...State and Federal regulatory authorities would adhere to, for example, the processes for improved and more efficient permitting, environmental reviews, and other decision-making identified in the CMS [Coastal and Marine Spatial] Plan to the extent these actions do not conflict with existing legal obligations. State and Federal authorities with programs relevant to the CMS Plan would in a timely manner review and modify programs, as appropriate, to ensure their respective activities, including discretionary spending (e.g., grants and cooperative agreements), adhere to the CMS Plan to the extent possible. State and Federal agencies would also be expected to formally incorporate relevant components of the CMS Plan into their ongoing operations or activities consistent with existing law. This may be implemented in a variety of ways. For example, agencies could enter into memoranda of understanding (MOUs) to coordinate or unify permit reviews and decision-making processes. Where existing regulatory or statutory requirements impose constraints on the ability of an agency to fully implement the CMS Plan, the agency would seek, as appropriate, regulatory or legislative changes to fully implement the CMS Plan."); 62 ("...CMS Plans...are intended to guide agency decision-making and agencies would adhere to the final CMS Plans to the extent possible, consistent with existing authorities...Once a CMS Plan is approved, Federal, State, and tribal authorities would implement them through their respective legal authorities."); and 65-66 ("Agencies would incorporate components of the CMS Plan into their respective regulations to the extent possible. Adherence with CMSP would be achieved through Federal and State agencies and tribal authorities incorporating CMS Plans into their pre-planning, planning, and permitting processes, to the extent consistent with existing laws and regulations. The CMS Plan signatories would periodically review these processes, and where legal constraints are identified, would seek to remedy these constraints, including by working with the NOC to evaluate whether a legislative solution or changes to regulations are necessary and appropriate."); National Ocean Policy Implementation Plan, April 2013, available at http://www.whitehouse.gov/sites/default/files/national_ocean_policy_implementation_plan.pdf, Page 21 (Marine planning will support regional actions and decision-making...); Marine Planning Handbook, July 2013, available at http://www.whitehouse.gov/sites/default/files/final_marine_planning_handbook.pdf, Page 17 ("By their concurrence, Federal agencies agree that they will use the marine plan to inform and guide their actions in the region consistent with their existing missions and authorities."); and Northeast Regional Planning Body Charter, available at http://northeastoceancouncil.org/wp-content/uploads/2012/11/Charter-without-signatories_FINAL.pdf, Pages 1 ("...participation on the RPB does not commit any **non-federal** RPB member, or **non-federal government** represented by the member, to adopt resulting products or plans." (emphasis added); 2 ("By committing to this process, RPB members agree to participate in regional ocean planning as a framework for improved coordination and decision making."); and 7 ("While regional ocean planning cannot supersede existing laws and agency authorities, it is intended to provide a better mechanism for application of these existing laws and authorities. If the Northeast RPB decides to create a formal regional ocean plan...the intent would be to guide agency decision-making, and agencies would adhere to the final plan to the extent possible, consistent with their existing authorities.").

² See e.g. 16 U.S.C. § 1452 (Coastal Zone Management Act), available at <http://www.gpo.gov/fdsys/pkg/USCODE-2012-title16/pdf/USCODE-2012-title16-chap33-sec1452.pdf> ("The Congress finds and declares that it is the national policy—(1) to preserve, protect, **develop**, and where possible, to restore or enhance, the resources of the Nation's coastal zone for this and succeeding generations; (2) to encourage and assist the states to exercise effectively their responsibilities in the coastal zone through the development and implementation of management programs to achieve wise use of the land and water resources of the coastal zone, giving full consideration to ecological, cultural, historic, and esthetic values **as well as the needs for compatible economic development, which programs should at least provide for... (D) priority consideration**

key driver and goal of the initiative.³ The Northeast RPB in turn should identify and seek public review and comment on proposed economic goals and related actions and performance indicators.

To ensure that such economic goals and actions are fulfilled, similar to its proposal to develop a regional ocean science plan (Goal 2, Objective 3), the Northeast RPB should also include the development of a regional economic development plan as part of its goals, objectives, and accompanying actions. Aided by the close engagement of existing and future potential commercial and recreational user groups and subject to public review and comment, the plan should identify and prioritize needs and outcomes for economic data and information, clearly specify how such needs will be met, and outline in detail how Northeast RPB activities will achieve its previously identified economic goals, actions, and performance metrics.

being given to coastal-dependent uses and orderly processes for siting major facilities related to national defense, energy, fisheries development, recreation, ports and transportation, and the location, to the maximum extent practicable, of new commercial and industrial developments in or adjacent to areas where such development already exists, (E) public access to the coasts for recreation purposes... [emphasis added]; 43 U.S.C. 1332 (Outer Continental Shelf Lands Act), available at <http://www.gpo.gov/fdsys/pkg/USCODE-2011-title43/pdf/USCODE-2011-title43-chap29-subchapIII.pdf> ("It is hereby declared to be the policy of the United States that—... (3) the outer Continental Shelf is a vital national resource reserve held by the Federal Government for the public, which should be made available for expeditious and orderly development, subject to environmental safeguards, in a manner which is consistent with the maintenance of competition and other national needs..."); 16 U.S.C. 1801 (Magnuson Stevens Fishery Conservation and Management Act), available at <http://www.gpo.gov/fdsys/pkg/USCODE-2012-title16/pdf/USCODE-2012-title16-chap38-subchapt.pdf> ("The Congress finds and declares the following: ...The fish off the coasts of the United States, the highly migratory species of the high seas, the species which dwell on or in the Continental Shelf appertaining to the United States, and the anadromous species which spawn in United States rivers or estuaries, constitute valuable and renewable natural resources. These fishery resources contribute to the food supply, economy, and health of the Nation and provide recreational opportunities...A national program for the development of fisheries which are underutilized or not utilized by the United States fishing industry, including bottom fish off Alaska, is necessary to assure that our citizens benefit from the employment, food supply, and revenue which could be generated thereby...It is therefore declared to be the purposes of the Congress in this Act—...to promote domestic commercial and recreational fishing under sound conservation and management principles...to encourage the development by the United States fishing industry of fisheries which are currently underutilized or not utilized by United States fishermen, including bottom fish off Alaska..."); 46 U.S.C. 55601 (Energy Independence and Security Act), available at <http://uscode.house.gov/view.xhtml?path=/prelim@title46/subtitle5/partD/chapter556&edition=prelim> ("The Secretary of Transportation shall establish a short sea transportation program and designate short sea transportation projects to be conducted under the program to mitigate landside congestion or to promote short sea transportation. (b) Program Elements.-The program shall encourage the use of short sea transportation through the development and expansion of-(1) documented vessels; (2) shipper utilization; (3) port and landside infrastructure; and (4) marine transportation strategies by State and local governments."); and 46 U.S.C. 50302 (Merchant Marine Act, as amended), available at <http://uscode.house.gov/view.xhtml?req=granuleid:USC-prelim-title46-section50302&num=0&edition=prelim> ("With the objective of promoting, encouraging, and developing ports and transportation facilities in connection with water commerce over which the Secretary of Transportation has jurisdiction, the Secretary, in cooperation with the Secretary of the Army, shall -(1) investigate territorial regions and zones tributary to ports, taking into consideration the economies of transportation by rail, water, and highway and the natural direction of the flow of commerce; (2) investigate the causes of congestion of commerce at ports and applicable remedies; (3) investigate the subject of water terminals, including the necessary docks, warehouses, and equipment, to devise and suggest the types most appropriate for different locations and for the most expeditious and economical transfer or interchange of passengers or property between water carriers and rail carriers; (4) consult with communities on the appropriate location and plan of construction of wharves, piers, and water terminals; (5) investigate the practicability and advantages of harbor, river, and port improvements in connection with foreign and coastwise trade; and (6) investigate any other matter that may tend to promote and encourage the use by vessels of ports adequate to care for the freight that naturally would pass through those ports.").

³ See National Ocean Policy Implementation Plan, April 2013, available at http://www.whitehouse.gov/sites/default/files/national_ocean_policy_implementation_plan.pdf, Pages 3 ("This Plan describes specific actions that translate the goals of the National Ocean Policy into on-the-ground change to address key challenges, streamline Federal operations, save taxpayer dollars, and promote economic growth.") and 6 ("This Plan responds to such challenges by focusing and coordinating action among Federal agencies under their existing authorizations and budgets, and by providing the tools we need to ensure a robust, sustainable ocean economy. It also promotes better science and information to support economic growth, more efficient permitting and decision-making, and healthier and more resilient marine ecosystems that will continue to support jobs, local economies, and a skilled and diverse ocean workforce.").

Taking such actions will help ensure that the promotion of economic activity and growth of the region's blue economy are adequately addressed in the Northeast RPB's activities.

GOAL: EFFECTIVE DECISION MAKING

As the Coalition stated in its previous comments, effective decision-making is a laudable goal. At the same time, a number of government entities with vastly different jurisdictions and responsibilities serve on the Northeast RPB, and current federal law provides clear jurisdictional leads for the leasing, permitting, and licensing of offshore activities.

Northeast RPB efforts that seek to streamline decision-making must therefore proceed within the confines of existing statutes and their regulatory regimes and not dilute or blur existing authorities and mandates, and, new proposed language stating that the RPB "must work within existing regulatory authorities" that appears in Objectives 1 and 3 should be maintained and apply to all goals and objectives that are ultimately adopted.⁴

Objective 1: Enhance inter-agency coordination

*Focus on aspects of governmental decision-making (NEPA and other existing siting/regulatory programs) related to marine energy production (wind, marine hydrokinetic) and infrastructure (transmission cables, pipelines), offshore aquaculture, sand extraction for beach nourishment, and consider other potential future uses (e.g., carbon sequestration). **For this objective, it is important to remember that the RPB must work within existing regulatory authorities and that different authorities exist for such activities.** This objective will focus on timing/scheduling, inter-agency information-sharing, and communication at a federal level and between state and federal agencies.*⁵

In attempting to address the enhancement of interagency coordination, the revised draft proposes to focus on existing siting/regulatory programs related to "marine energy production (wind, marine hydrokinetic) and infrastructure (transmission cables, pipelines), offshore aquaculture, sand extraction for beach nourishment, and consider other potential future uses (e.g., carbon sequestration)."⁶ In carrying out this objective, *all* existing and potential future uses that are subject to existing siting and regulatory programs should be addressed, including fishing and boating, conventional energy, ports, shipping, and other forms of waterborne transportation and commercial and recreational activity.

In furtherance of this objective, the Northeast RPB specifically proposes to:

- Review federal statutory requirements for regulating siting of energy-related development (including electricity generation and transmission, infrastructure such as pipelines, etc), offshore aquaculture, sand extraction for beach nourishment, and other potential future uses of ocean space. Review analogous programs at the state level. In addition to development-specific requirements (e.g., wind energy responsibilities that BOEM has related to the 2005 Energy Policy Act), include more broad considerations such as the National Environmental Policy Act

⁴ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Pages 1 and 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

⁵ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 1, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

⁶ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 1, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

(NEPA). In addition to this “on-paper” review, discuss practical implementation with agencies and the regulated community.

- Pursue opportunities to coordinate with the U.S. Bureau of Ocean Energy Management’s leasing program for offshore wind development. Focus on site assessment and construction-operations plan requirements, the utility of regional ocean planning data and information, tribal coordination, and other topics.
- Identify specific opportunities to enhance interagency coordination for marine energy production, infrastructure, offshore aquaculture, and sand extraction for beach nourishment. Include National Environmental Policy Act and development-specific regulatory programs in this action. Recognizing that there may be obstacles to this action, also identify specific obstacles to achieving those opportunities, and specific, concrete steps toward addressing these obstacles. Convene non-governmental entities (regulated community and other interested parties) to discuss, and revised prior to finalizing details.⁷

According to the revised draft, outcomes would include strengthened interagency coordination, federal and state regulatory efficiencies, and “agency commitments to implement,” as well as public information outlining existing review processes and how regulated entities and the public can participate.⁸

Better coordination across governmental agencies could yield positive results. As the Coalition stated in its previous comments, addressing existing inefficiencies by identifying and cataloguing flaws in the current system in terms of regulatory agencies and their ability to work with one another could help promote effective decision-making. The development of any such review and recommendations should include close engagement with the regulated community and relevant agencies and the utilization of adequate public comment periods.

In sharing the findings of any report and recommendations with agencies and officials that have the statutory responsibilities for managing ocean and coastal resources, such information should be provided for their use and consideration as they see fit. Agency implementation of any recommended actions that are included in the Northeast RPB’s report should be strictly voluntary, based on the agency’s careful, independent, and transparent consideration and best judgment, and consistent with existing applicable laws and regulations.

Objective 2: Implement specific actions to enhance informed public input in decision-making

In furtherance of this objective, the Northeast RPB specifically proposes to:

- Develop and disseminate publicly-accessible materials describing regulatory programs related to the type of activities reviewed under Objective 1, including opportunities for public comment, steps where data and information can be provided, and overall timeline for decisions. Existing resources will provide much of the material for this task.

⁷ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 1, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

⁸ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 1, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

- Engage interested parties to identify other potential means of meeting this objective. This could include topics such as: enhanced use of on-line/social media, use of existing public meetings (such as those of the RPB) to provide updates on ocean development projects, demonstrating how public input is/would be incorporated in decision-making, and other ways to meet this objective.⁹

According to the revised draft, outcomes would include enhanced opportunities for public participation in ocean development proposals and review processes and greater public understanding of and ease of participation in regulatory processes.¹⁰

Consistent with the Coalition's previous comments, the Northeast RPB should provide assurances that any such activities would be carried out in an effective manner, as utilizing a new entity to inform and engage the public and others could create confusion, contribute to regulatory fatigue, and lead to the dissemination of conflicting information.

To the degree that the Northeast RPB itself nevertheless seeks to inform the public about existing regulatory processes and opportunities for engagement within the confines of those regimes, it should thus first coordinate with the agencies and officials of jurisdiction in order to ensure the veracity of any information that is shared with the public.

Objective 3: Incorporate maps and other products into existing agency decision-making processes

*Scientifically-sound, stakeholder-reviewed products should be publicly available through the Northeast Ocean Data Portal. **For this objective, it is important to remember that the RPB must work within existing regulatory authorities.** Uncertainty and variability in data and other issues must be identified and described for each data product. Caveats associated with data products may limit their utility; some data may be most helpful in generally identifying issues needing further study and/or stakeholders to engage. Certain products may be applicable for preliminary site assessment or consideration of alternatives.¹¹*

In calling for the incorporation of maps and other products into existing decision-making processes, the revised draft calls for the use of "scientifically sound, stakeholder-reviewed products" made publicly available through the Northeast Ocean Data Portal, noting that data uncertainties and variations must be identified and described in each data product and that caveats may limit the utility of certain data products.¹²

In furtherance of this objective, the Northeast RPB specifically proposes to:

⁹ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Pages 1-2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

¹⁰ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

¹¹ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

¹² See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

- Within existing regulatory processes, identify potential uses for/applicability of regional ocean planning products. Convene interested parties (government and non-government) to discuss this topic and revise products accordingly.
- Update the Northeast Ocean Data Portal reflecting the results of the above action. Enhance Northeast Ocean Data Portal functionality through better presentation, characterization, and visualization of products.
- Work with appropriate agencies/data owners to increase responsibility for maintaining/updating data products and the Northeast Ocean Data Portal, beginning with illustrations of the utility of products developed for regional ocean planning purposes and recognizing future budget issues.¹³

According to the revised draft, outcomes of this objective would include regional ocean planning products and information that enable preliminary site assessments, provide a better understanding of existing conditions, contribute to regulatory efficiencies, direct stakeholder engagement on the development of Northeast Ocean Data Portal products, and the long-term maintenance and updating of the Northeast Ocean Data Portal and its products.¹⁴

As the Coalition previously conveyed, data and maps that are properly collected, developed, and used can be of great utility to government, scientists, ocean and coastal user groups, and the public.

At the same time, the Northeast RPB's proposal to further the incorporation of regional data and maps into existing decision-making or regulatory processes could lead to unintended consequences.¹⁵ If not conducted with great caution and sound scientific methodology and custom-designed based on a particular need, the use of data and maps could promote unnecessary or unjustified time and space restrictions. In addition, static data and maps that omit new information on the region's coastal and marine resources could preclude investments in new economic activity in the region or otherwise constrain informed decision-making on evolving national priorities.

While important and existing efforts to improve data collection and database creation should continue, absent express legislative authorization and appropriation, available resources and methodologies are insufficient to incorporate new regional maps and other products into decision-making processes by arbitrary deadlines. Furthermore, such efforts could divert scarce agency resources and personnel away from existing governmental activities that are necessary to support existing and potential future ocean and coastal activities in the Northeast.

To the degree that the Northeast RPB nonetheless pursues this objective, the use of "scientifically-sound" data products proposed in the revised draft should be maintained in favor of the original proposal to integrate "best available knowledge," and the revised draft's acknowledgement of the need to account for uncertainties, variations, and potential limitations in data should similarly be preserved.

¹³ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

¹⁴ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

¹⁵ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

Any such data products must account for all of the region's offshore resources and existing and future potential uses, including fishing and boating, conventional energy, ports, shipping, and other forms of waterborne transportation and commercial and recreational activity.

In addition, the Northeast RPB should provide clear guidance and protocols that apply to its collection and use of data (including minimum requirements with relevant federal and state data quality laws, standards, and protocols).

Any decision to develop a regional ocean planning product must also be: (1) subject to an opportunity for extensive public review and comment; (2) informed by active and comprehensive engagement with all existing and future potential user groups, and (3) followed by continuous opportunities to update such products and the prompt incorporation of any updated data.

Objective 4: Improve respect for the customs and traditions of indigenous peoples in decision-making processes

In furtherance of this objective, the Northeast RPB specifically proposes to:

- Identify areas and species important for sustenance activities.
- Develop means of incorporating information developed under the above action into decision-making.¹⁶

The Northeast RPB Charter notes that it “is not a regulatory body” and “has no independent legal authority to regulate or otherwise direct federal, state, or tribal entities.”¹⁷ Proposing to develop a mechanism for the incorporation of areas and species deemed “important for sustenance activities” into existing decision-making raises significant concerns that the Northeast RPB could take actions that exceed its non-regulatory function, and create new regulatory uncertainties for existing and potential future user groups who are governed by long-established ocean and coastal management statutory authorities.

The development of any mechanisms to incorporate areas and species deemed important for sustenance into decision-making must therefore be undertaken by those entities that are statutorily authorized to do so rather than the Northeast RPB, and any identification of such areas must be subject to public review and comment.

Objective 5: Periodically assess process toward achieving this goal and Objectives 1-4

The revised draft proposes that the Northeast RPB develop and implement mechanisms to track progress toward the achievement of effective decision-making and the goal's underlying objectives.

The Northeast RPB specifically proposes to:

¹⁶ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

¹⁷ See Northeast Regional Planning Charter, Page 1, available at http://northeastoceancouncil.org/wp-content/uploads/2012/11/Charter-without-signatories_FINAL.pdf.

- Develop and implement tracking mechanisms to identify if objectives toward this goal are being met. Include periodic/routine input from the regulated community and the public. This Action is intended to identify longer-term (beyond two years) needs and to implement necessary steps to meet those needs.¹⁸

Any periodic assessments should be subject to formal public comment periods, and the Northeast RPB should specify how frequently such periodic assessments would take place.

GOAL: HEALTHY OCEAN AND COASTAL ECOSYSTEMS

Commercial and recreational interests have a direct stake in healthy ocean and coastal ecosystems and support sound, informed, and science-based policies that support them. As the Coalition previously stated, a number of federal laws are already in place that directly and indirectly address the protection of ocean and coastal ecosystems, and healthy ocean and coastal ecosystems should be supported through existing entities, mechanisms, and processes.

Objective 1: Characterize the region's ecosystem and economy

Characterize the region's species, habitats, cultural resources, and existing human activities and economy is a component of understanding the "health" of New England's ocean and coastal ecosystems. Environmental conditions in parts of the region appear to be changing and, where possible, such phenomena should be described and ways to portray the dynamic nature of the system explored. Some issues require additional scientific focus, data development, or longer-term consideration.¹⁹

The revised draft proposes to characterize the region's species, habitats, cultural resources, existing human activities, and economy, noting that some issues demand more scientific focus, data development, and longer-term consideration.²⁰

In furtherance of this objective, the Northeast RPB specifically proposes to:

- Work with the scientific community and other interested parties to integrate natural resource data and model-derived products to characterize marine life and habitats. This includes producing maps for bird, sea turtle, shellfish, marine mammal, fish, and bottom (benthic) habitats. Consider the potential for developing products related to other issues such as historic and future trends, ocean acidification, biodiversity, productivity, species biology (including migration), and the physical/oceanographic environment. Assess the potential for climate change impacts to alter existing conditions. In these considerations, consider scientific understanding and data availability. Convene scientists and other stakeholders to discuss preliminary assessments and potential next steps.
- Identify areas and resources that are of tribal importance.

¹⁸ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 3, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

¹⁹ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 4, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

²⁰ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 4, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

- Assess and summarize efforts in the region that have attempted to identify areas of ecological “importance” or measure the “health” of the marine system. The first step in this action will be to define these terms to provide further specificity and direction.
- Work with the shipping, commercial fishing, boating, recreational fishing, energy, aquaculture, and recreation communities to develop information describing those human activities. Engage those stakeholders in specific project design, data development where appropriate, implementation, and review of draft products prior to finalizing.
- Develop an assessment of the regional maritime economy, beginning with compilation of existing analysis/data to determine ability to produce comprehensive economic assessment.
- Incorporating information from the above actions, develop and periodically update a regional baseline assessment of the coastal and ocean ecosystem and data compilation related to the coastal and marine economy.
- Review ongoing and past studies looking at the vulnerability of marine life/habitats to human activities. As part of this summary, assess the current state of the science regarding cumulative impact assessment.
- Incorporate results of above actions into maps and other products that the RPB would seek to incorporate into existing decision-making processes under Goal 1.
- For the above actions: (1) identify priority gaps for the regional ocean science plan described in Objective 3, identifying whether there are priority gaps that could meet other purposes beyond those of regional ocean planning; and (2) pursue incorporating the results of the above actions into existing decision-making processes under Objective 3 of Goal 1.²¹

According to the revised draft, outcomes would include a regional characterization of human activities, cultural resources, natural resources, and the ocean and coastal economy, scientific and stakeholder community engagement, and the incorporation of products into decision-making “as appropriate and only if specific caveats associated with each product are clearly articulated.”²²

If a regional economic and environmental assessment is not developed through a transparent public process, held to the highest data quality standards, and updated and adapted to suit evolving information and public policy needs, it could ultimately introduce new uncertainties for commercial and recreational interests that lead to unnecessary regulatory hurdles or obstacles to access. For example, agency use of data and maps that are incomplete, untimely, or not applied as intended could lead to adverse regulatory impacts.

For the reasons provided above in the Goal 1, Objective 3 discussion, and to limit the potential of harmful impacts, the Northeast RPB should therefore not adopt its proposal to pursue the incorporation of the results of the proposed actions in furtherance of a regional economic and environmental assessment into existing agency decision-making processes.

Consistent with its proposal to compile existing data and analysis to determine its capacity to produce a comprehensive economic assessment before one is developed, the Northeast RPB should similarly

²¹ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 4, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

²² See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

assemble relevant existing scientific data and analysis to ascertain its ability to conduct the proposed environmental characterization before one is commenced. In addition, as with the Northeast RPB's proposal (Goal 3, Objective 1) to assess the future viability of human activity maps -- including the identification of the need, timing, and other considerations for updates to such maps -- the future viability of environmental maps and the identification of considerations for potential updates to them should also be assessed.

The economic component of the proposed assessment should include a complete analysis of all existing and future potential uses, as identified by commercial and recreational stakeholders, and the economic and societal benefits that they could provide for the region.

In addition, the Northeast RPB should maintain new language which recognizes that “[s]ome issues require additional scientific focus, data development, or longer-term consideration,” that scientific understanding and data availability should be considered in the potential development of certain products, and that caveats associated with products developed under this objective must be “clearly articulated.”²³

As stated above and for any assessment, the Northeast RPB should provide clear guidance and protocols that apply to the data that is collected and used (including minimum requirements with relevant federal and state data quality laws, standards, and protocols). The development of any assessment, including any identification of areas of ecological importance and areas and resources of tribal importance, must also be: (1) subject to an opportunity for extensive public review and comment; (2) informed by active and comprehensive engagement with all existing and future potential user groups; and (3) followed by continuous opportunities to update any assessment and the prompt incorporation of any updated data.

Objective 2: Identify and support existing non-regulatory opportunities to work toward conserving, restoring, and maintaining healthy ecosystems

*Existing non-regulatory programs at the federal and state level are widespread and address many coastal and ocean health issues. Examples include habitat restoration activities, certain water quality improvement programs, enhancements to existing infrastructure, assessment of invasive species, etc.*²⁴

In seeking to identify and support existing non-regulatory opportunities to conserve, restore, and maintain healthy ecosystems, the revised draft references existing federal and state-level non-regulatory programs related to habitat restoration, water quality improvement, existing infrastructure enhancements, and invasive species.²⁵

In furtherance of this objective, the Northeast RPB specifically proposes to:

- Identify existing as well as potential programs that are or would be directly related to conservation, restoration, and maintaining healthy ocean and coastal ecosystems at a federal

²³ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Pages 4 and 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

²⁴ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

²⁵ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

and state level. Identify opportunities for better coordinating and supporting those programs to address priority regional ocean planning needs.²⁶

Utilizing existing non-regulatory mechanisms to support the conservation, restoration, and maintenance of healthy ecosystems would be consistent with the Northeast RPB's non-regulatory status and help ensure that the regulatory landscape for the region's ocean and coastal user community is not further clouded.

In seeking to support any such programs, however, the Northeast RPB must be cognizant of limited agency staff and financial resources and ensure that such resources are not diverted away from statutorily-authorized purposes, and any Northeast RPB proposals to identify and support non-regulatory programs should include projected costs and funding sources and be subject to a sufficient opportunity for public review and comment.

Objective 3: Produce a regional ocean science plan that prioritizes ocean science and data needs for the region for the next five years

There will be gaps in data and information that will directly affect attempts to fully achieve goals set out by the RPB. The regional ocean science plan will help fill those gaps, but importantly will also recognize that these science needs will be directly framed by the regional ocean planning effort recognizing the continuing role and capacity of existing efforts to address certain topics.²⁷

In calling for the development of a regional ocean science plan, the revised draft notes that data and information gaps “will directly affect attempts to fully achieve goals set out by the RPB,” adding that the science plan will help fill the gaps while also “recogniz[ing] that these science needs will be directly framed by the regional ocean planning effort...”

In furtherance of this objective, the Northeast RPB specifically proposes to:

- Engage agencies, the scientific community, and other stakeholders to prioritize scientific/data needs. Coordinate with existing efforts that are underway or related, and recognize continuing need for basic data development to fill gaps (and budget challenges that may enhance gaps in the future). For priority topics, describe priority outcomes and identify potential ways of addressing those issues (including consideration of leveraging/partnering with existing efforts).²⁸

Recognizing the existence of gaps is critical to ensuring that decisions are not made based on insufficient data and information. At the same time, efforts to develop a regional ocean science plan could divert scarce agency resources and personnel away from existing governmental activities that are necessary to support existing and potential future ocean and coastal activities in the Northeast.

²⁶ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

²⁷ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

²⁸ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

Given resource constraints and the importance of ensuring that any regional ocean science plan addresses the issues of most importance to the region, a draft proposal for any such plan, including projected costs, funding sources, and goals and objectives, should be made available for public review and comment.

As the revised draft acknowledges, “[t]here will be gaps in data and information that will directly affect attempts to fully achieve goals set out by the RPB.”²⁹ In order to ensure the identification and implementation of well-informed and coordinated activities, the development and finalization of the regional ocean science plan should precede actions taken in furtherance of Northeast RPB goals and objectives that involve the use of scientific data or information.

Objective 4: Periodically assess process toward achieving this goal and Objectives 1-3

The revised draft proposes that the Northeast RPB develop and implement mechanisms to track progress toward the achievement of healthy ocean and coastal ecosystems and the goal’s underlying objectives.

The Northeast RPB specifically proposes to:

- Develop and implement tracking mechanisms to identify if objectives toward this goal are being met. Include periodic/routine input from the regulated community and the public. This Action is intended to identify longer-term (beyond two years) needs and to implement necessary steps to meet those needs.³⁰

Any periodic assessments should be subject to formal public comment periods, and the Northeast RPB should specify how frequently such periodic assessments would take place.

GOAL: COMPATIBILITY AMONG PAST, CURRENT, AND FUTURE OCEAN USES

A number of entities, mechanisms, and processes created by federal and state statutes to address ocean and coastal resource management are in effect. Northeast RPB efforts that seek to promote compatibility among uses must do so in a non-regulatory manner that is consistent with the mandates of existing statutes and related regulations.

Objective 1: Increase understanding of past, current, and future ocean uses

*Addressing project-specific compatibility issues generally is the domain of specific project-review processes and thus is appropriately addressed during permitting. Regional ocean planning can add value by enhancing understanding of trends in human activities, to the extent foreseeable, and by ensuring that specific projects underway consider regional considerations resulting from engagement of stakeholders in the Northeast.*³¹

²⁹ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

³⁰ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 5, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

³¹ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 6, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

In attempting to increase understanding of past, current, and future ocean uses, the revised draft proposes to “enhanc[e] understanding of trends in human activities, to the extent foreseeable” and “ensur[e] that specific projects underway consider regional considerations resulting from engagement of stakeholders in the Northeast.”³²

In furtherance of this objective, the Northeast RPB specifically proposes to:

- Examine technological, management, economic, environmental, or other factors to enhance understanding of reasonably foreseeable changes in human uses. Engage industry representatives and experts in maritime commerce, recreation, commercial fishing, marine energy development, and offshore aquaculture to help determine future possible scenarios or trends if possible. Gauge the potential for relatively new offshore uses such as offshore aquaculture and sand and gravel for beach nourishment.
- Use the results from the above action to assess the future viability of human activity maps. Identify the need, timing, and other considerations for periodic updates to such maps.³³

If used to address economic activity without injecting additional uncertainty, risk, and delays, the assessment of trends in offshore economic activities could be beneficial. Therefore, the Northeast RPB should remove the “if possible” caveat currently included in the proposal to engage industry representatives and other experts to ascertain future possible scenarios or trends.

In addition, closely engaging commercial and recreational sectors is necessary to develop an informed understanding of current and future potential trends in offshore economic activity. Any such assessments should include all ocean and coastal resources and existing and future potential uses, and be subject to public review and comment and properly scoped and defined to meet regional goals and priorities developed through broad stakeholder consensus.

In the event that potential future changes to human activity maps are identified, such identified potential changes should be released for public review and comment before they are incorporated into any maps, with the Northeast RPB specifying how the potential changes to human activity maps could be implemented and what impact the incorporation of those changes into human activity maps could have on existing and future ocean and coastal users.

Objective 2: Ensure regional issues are incorporated in ongoing efforts assessing new/existing human activities

*Several ongoing projects are looking at potential interactions between various human activities through assessing existing information and data. Many of these projects relate to ongoing offshore wind energy development and aspects of these projects may benefit from a regional perspective, recognizing that it will be important to understand their scope, timing, and intended purpose to help identify opportunities to contribute to such work.*³⁴

³² See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 6, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

³³ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 6, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

³⁴ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 6, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

In seeking to ensure the incorporation of regional issues in ongoing efforts to assess new and existing human activities, the revised draft notes that several projects examining potential interactions between human activities through existing information and data assessments are ongoing. It further notes that many of the projects relate to offshore wind development, and that aspects of the projects “may benefit from a regional perspective.”³⁵

In furtherance of this objective, the Northeast RPB specifically proposes to:

- Summarize the status of projects such as the Atlantic Coast Port Access Route Study, Bureau of Ocean Energy Management-led Northeast Sand Management Working Group, regional efforts to assess commercial and recreational fishing and offshore wind energy development, and the identification of potential paleocultural resources offshore Rhode Island, and others.
- Using the above assessment, identify considerations for these existing efforts and work with sponsoring agencies/entities to do so. Identify need to facilitate discussions between diverse users and agencies and undertake such discussions where appropriate.
- Convene regional stakeholders and experts to discuss issues related to electricity transmission from grid-scale wind energy projects. The purpose of this action will be to enhance understanding of issues related to siting and/or connections to existing transmission network.³⁶

According to the revised draft, outcomes would include the incorporation of regional perspectives in ongoing projects, information describing potential future uses of the ocean, the viability of existing human activity maps and the need for updates, and public dialogue on regional issues related to offshore wind siting.³⁷

The provision of informed comments on this proposal is constrained absent a clearer explanation of how it would be carried out. For example, the Northeast RPB proposes to ensure the incorporation of “regional issues” in ongoing efforts in part by summarizing the status of (1) two particular projects; (2) regional commercial/recreational fishing and offshore wind regional assessments; (3) the identification of possible paleocultural resources offshore Rhode Island; and (4) “and others.” In addition, it proposes to use the assessment to identify “considerations” for these existing efforts.

To provide an opportunity for informed comments, the Northeast RPB should remove references to “regional issues,” “and others,” and “considerations” and clearly specify: (1) the specific regional issues to be addressed; (2) the criteria for determining which projects/activities will be addressed; and (3) how the information included in such an assessment would specifically be used and acted upon.

Any assessment summarizing the status of ongoing projects, and all data underlying such assessments, should first be made available for public review and comment. In doing so, the Northeast RPB should clearly explain how the information included in the assessment might be used. In addition, the

³⁵ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 6, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

³⁶ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 6, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

³⁷ See Northeast Regional Planning Body Revised Goals, Objectives, Actions, and Outcomes, Page 6, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/11/NortheastRPBgoals-objectives-actions.pdf>.

Northeast RPB should publicly announce any “considerations” for existing efforts that are identified, any related work that it engages in with sponsoring agencies/entities, and any sectors/entities that are identified as candidates for user group-agency discussions. Any such discussions should be announced by public notice and open to the public.

Objective 3: Periodically assess process toward achieving this goal and Objectives 1-2

The revised draft proposes that the Northeast RPB develop and implement mechanisms to track progress toward the achievement of compatibility among past, current, and future ocean uses and the goal’s underlying objectives.

The Northeast RPB specifically proposes to:

- Develop and implement tracking mechanisms to identify if objectives toward this goal are being met. Include periodic/routine input from the regulated community and the public. This Action is intended to identify longer-term (beyond two years) needs and to implement necessary steps to meet those needs.³⁸

Any periodic assessments should be subject to formal public comment periods, and the Northeast RPB should specify how frequently such periodic assessments would take place.

CONCLUSION

The Coalition appreciates the opportunity to provide comments on the revised draft goals, objectives, actions, and outcomes. At the same time, the Coalition strongly maintains that mechanisms that provide a formal means for commercial and recreational interests to adequately interact with and advise the Northeast RPB on its activities (including but not limited to the creation of a formal advisory committee under the Federal Advisory Committee Act) should be in place before the Northeast RPB moves any further ahead.

The Coalition looks forward to continued engagement with the Northeast RPB to help ensure that this process does not adversely impact the region’s existing and future potential commercial and recreational interests, and the jobs and communities that they seek to support.

Sincerely,

Brent Greenfield
Executive Director
National Ocean Policy Coalition

Gloucester, Massachusetts 01930-2276

RE: Comments on the Draft Ocean Planning Goals

Dear Ms. Nicholson:

The National Ocean Policy Coalition (“Coalition”) is pleased to submit comments on the Northeast Regional Planning Body’s (“Northeast RPB”) draft regional ocean planning goals, potential actions, and outcomes. The Coalition is an organization of diverse interests representing sectors and entities that support tens of millions of jobs, contribute trillions of dollars to the U.S. economy, and seek to ensure that actions under the National Ocean Policy are implemented in a manner that best benefits the National interest, including protection of the commercial and recreational value of the oceans, marine-related natural resources, and terrestrial lands of the United States.

Introduction

Ocean and coastal policies play a critical role in our national, regional, and local economies, national security, culture, health, and well-being. The Coalition supports ocean and coastal policies that serve as mechanisms for job creation, infrastructure revitalization, and economic growth, conserve the natural resources and marine habitat of our ocean and coastal regions, and rely on full utilization of existing programs and well-established authorities that are already in place.

As currently written, the draft Northeast Regional Ocean Planning goal document includes items that could adversely impact existing and future commercial and recreational activities in the Northeast. The Coalition’s comments below address those of the most significance. With this in mind, the Coalition strongly encourages the Northeast RPB to consider the following in all activities it undertakes:

- As a newly-established, non-regulatory body, the Northeast RPB must conduct its affairs in a manner that reflects its non-regulatory function. Decision-making that falls under an existing statutory or regulatory authority of a federal, state, or local agency or planning body should not be preempted by the outcome of the work of this RPB. Such action would blur or dilute existing authorities and mandates. The Northeast RPB should strive to serve as a forum to improve the quality and accessibility of information, thus better informing and expediting effective decision-making under existing statutes and the regulatory regimes they established.

- The Coalition does not support the furtherance of any Northeast RPB efforts that extend beyond this non-regulatory scope—including the development of a new regional ocean plan or planning framework—as ocean planning denotes making decisions on resource values and use. However, to the extent that the RPB develops information to inform regulatory processes, the Northeast RPB must ensure that all its activities are well-informed by a multi-stakeholder process, thoughtfully developed to avoid biased outcomes, and grounded in sound science and quality data. The RPB must conduct its activities in a manner that is consistent with existing legal authorities, and establish clear protocols and standards so as to not be subject to arbitrary processes and decisions which would further complicate regulatory processes or inject regulatory uncertainty. Such outcomes would potentially restrict or preclude commercial and recreational use of ocean, coastal, and other “connected” areas without due process afforded in law.
- To be successful, the Northeast RPB must establish a formal role for commercial and recreational user groups to interact with and provide advice to the RPB (including but not limited to the creation of a formal advisory committee under the Federal Advisory Committee Act) before moving forward. The activities of the RPB should be held to the same stakeholder processes and standards as those accorded to normal ocean use planning processes under regulatory authorities. A clear, transparent, and inclusive process would significantly decrease the likelihood of poorly-informed actions that unnecessarily constrain commercial and recreational activity in the Northeast.

Timeline

Efforts to increase regulatory efficiencies and develop a greater understanding of ocean and coastal resources and existing and potential future uses can be of great benefit. However, the Coalition is concerned that the Northeast RPB is moving forward in a manner that lessens the likelihood for a thoughtful and well-informed outcome. According to the planning timeline that was recently approved, Northeast RPB products and outcomes are to be submitted to the National Ocean Council by 2015.³⁹ To that end, in seeking public comments on the draft goals, the Northeast RPB also asks for feedback on priority outcomes and actions over the next two years.

Rather than establishing pre-determined deadlines for the completion of unknown RPB activities, timelines should be developed based on the time that is needed to identify, consider, and implement goals and any related actions that are ultimately agreed upon following significant user group and public engagement efforts. Practical and achievable timelines cannot be ascertained before such engagement has taken place and such goals and related actions have been identified.

Newly-established non-regulatory entities such as the Northeast RPB must ensure that their activities are well-informed, thoughtfully developed, grounded in sound science and quality data, conducted in a manner that is consistent with existing legal authorities, and not used to arbitrarily and further complicate regulatory processes or inject regulatory uncertainty that would restrict or preclude commercial and recreational use of ocean, coastal, and other “connected” areas.

The Coalition’s comments below address those concerns of the most significance.

³⁹ See Northeast Regional Ocean Planning Timeline: 2012-2015, available at <http://www.northeastoceanCouncil.org/comment-on-the-draft-ocean-planning-goals/>.

Draft Goal One: Effective Decision-Making

“Improve management effectiveness, intergovernmental decision making, engagement, collaboration, and integration of best available knowledge. Reflect ever changing social, environmental, and technological conditions.”⁴⁰

Effective decision-making is a laudable goal. Better coordination across governmental agencies, user group engagement, collaboration, and a science-based approach could yield positive benefits, particularly for sectors in the Northeast such as the fishing industry that are already facing federal regulations that are said to be flawed and adding to continued economic headwinds and uncertainty.⁴¹ However, Northeast RPB efforts intended to improve the effectiveness of ocean and coastal decision-making could foster regulatory inefficiencies rather than reduce them. Current federal law provides clear jurisdictional leads for leasing, permitting, and licensing of offshore activities. Environmental impact assessment and mitigation is also clearly provided for in the National Environmental Policy Act, the Marine Mammal Protection Act, and the Endangered Species Act. The Northeast RPB should serve as a forum to expedite decision-making under these statutes and the regulatory regimes they established and not dilute or blur existing authorities and mandates.

Similarly, the number of various governmental entities with vastly divergent jurisdictions and responsibilities that currently serve on the Northeast RPB underscores the need for this body to avoid the introduction of new regulatory hurdles, ambiguities, or uncertainties that would frustrate or delay government decision-making within or between Northeast RPB agencies and unnecessarily restrict existing and potential future commercial and recreational activities in the Northeast.⁴²

Draft Goal One Potential Action: “Incorporate regional data and maps into regulatory processes”⁴³

Data and maps that are collected, developed, and used properly can be of great utility to government, scientists, ocean and coastal user groups, and the public. However, the draft potential action to apply regional data and maps in the regulatory context raises concerns. While the Northeast RPB notes in its Charter that it “is not a regulatory body” and “has no independent legal authority to regulate or otherwise direct federal, state, or tribal entities,”⁴⁴ the incorporation of regional data and maps into regulatory processes could result in impacts similar to the issuance of new regulations. The integration of regional data and maps into the regulatory process is aspirational at this point. If not conducted with great caution and sound scientific methodology, it could lead to unrelated data being combined in a manner that wrongly implies correlation and could promote unjustified precautionary principle protections.

⁴⁰ See Draft Goals for Northeast Regional Ocean Planning, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁴¹ See Office of the Attorney General of Massachusetts Press Release, “AG Coakley Sues NOAA To Block New Regulations That Threaten Fishing Industry,” May 30, 2013, available at <http://www.mass.gov/ago/news-and-updates/press-releases/2013/2013-05-30-noaa-lawsuit.html>; and Gloucester Times, “Lawmakers Tie NOAA Funds To Catch Hikes,” December 15, 2010, available at <http://www.gloucestertimes.com/fishing/x1666505078/Lawmakers-tie-NOAA-funds-to-catch-hikes>.

⁴² In addition to state and tribal representatives representing Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont, Northeast RPB members include federal officials from agencies as varied as the Departments of Agriculture, Commerce, Defense, Energy, Homeland Security, Interior, and Transportation to the Environmental Protection Agency and Federal Energy Regulatory Commission. See Northeast Regional Planning Body Membership Roster, available at <http://northeastoceancouncil.org/wp-content/uploads/2013/04/Membership-Roster-NE-RPB1.pdf>.

⁴³ See Draft Goals for Northeast Regional Ocean Planning, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁴⁴ See Northeast Regional Planning Charter, Page 1, available at http://northeastoceancouncil.org/wp-content/uploads/2012/11/Charter-without-signatories_FINAL.pdf

Moreover, data and maps cannot be universally applied to any regulatory process regardless of context. Rather, data and maps must be custom-designed based on the particular need. Generated for one particular purpose, data and maps could be misused and misapplied in other contexts as a basis for enacting new time and space restrictions for existing uses, and static data and maps could preclude new information on and investments in potential future uses that might otherwise be allowed to occur, causing economic and societal harm for the Northeast region.

Concerns about the impacts of the incorporation of regional data and maps into regulatory processes are compounded by the absence of clear guidance and protocols for the collection and use of such data and maps, as well as the draft goal's call for integrating "best available knowledge" as opposed to relying on sound science. Recent trends in "sue and settle" litigation in areas such as Endangered Species Act listings demonstrate that "best available knowledge" can be used as a proxy to block multiple uses of public lands without an adequate scientific basis.

There are many important and existing efforts in state and federal government agencies to improve data collection and database creation. Such efforts should continue. However, it should also be recognized that, absent express legislative authorization and appropriation, there will not be sufficient resources or methodologies to incorporate regional data and maps into regulatory processes by arbitrary deadlines. Furthermore, efforts to accelerate this activity in the current economy could siphon scarce resources and personnel away from existing governmental activities that are necessary to support existing and potential future ocean and coastal commercial and recreational activities in the Northeast.

*Draft Goal One Potential Action: "Conduct regional cumulative impacts analysis utilizing improved environmental and ocean use information and data"*⁴⁵

This potential action is also problematic. Among other things, it is unclear how such analysis would be conducted and funded, what it would be intended to measure, and how the analysis would be used and applied. In addition, it appears to closely correspond with the "Regional Assessment" required to be included in a Coastal and Marine Spatial Plan as set forth in the National Ocean Policy.⁴⁶

Therefore, without further clarity on these points, the draft potential action is too vague to provide informed comment on. To the extent that the Northeast RPB nonetheless conducts such an analysis, it must be done in a way that is grounded in real-world data and accurately assesses mitigation measures and the impact of new technology on environmental footprints.

*Draft Goal One Potential Action: "Inform and engage the public for better decision making"*⁴⁷

This potential action implies that existing mechanisms are insufficient to inform and engage the public on ocean and coastal management issues in the region. Federal laws such as the National Environmental Policy Act, Coastal Zone Management Act, and Administrative Procedure Act already require opportunities for public participation in decision-making pertaining to ocean and coastal

⁴⁵ See Draft Goals for Northeast Regional Ocean Planning, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁴⁶ See Page 59, Final Recommendations of the Interagency Ocean Policy Task Force, July 19, 2010 ("The regional assessment...would also include an analysis...of cumulative risks as well as forecasts and models of cumulative impacts.").

⁴⁷ See Draft Goals for Northeast Regional Ocean Planning, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

activities. To the degree that public engagement on ocean and coastal management can be improved, long-established mechanisms and entities are the appropriate vehicles for doing so.

Given that the Northeast RPB has been established and is contemplating actions, however, the Northeast RPB itself must conduct robust, transparent, and continuous public engagement activities to provide opportunities for citizens and those with interests in the Northeast to weigh in. This is an unfortunate circumstance, as utilizing a new entity to inform and engage the public and others could introduce additional confusion and contribute to regulatory fatigue.

Draft Goal One Potential Action: “Coordinate and leverage science, traditional knowledge, and data development to address regional priorities”⁴⁸

The utility and success of an effort to use sound science, traditional knowledge, and quality data to address regional priorities depends in part on whether such an initiative truly addresses regional priorities. Regional priorities should be developed and furthered on a collaborative basis with the backing of those who live and work in the Northeast, including the commercial and recreational interests that support jobs and economic activity in the region.

Such an effort must also be informed by sound science and quality data that complies with strict integrity safeguards, protocols, and requirements, as well as socioeconomic data that accounts for the benefits associated with both existing and future potential commercial and recreational uses.

Finally, it is unclear how the Northeast RPB would “address” such regional priorities. The Northeast RPB Charter notes that its products “could include a formal regional ocean plan or a set of deliverables such as improved data, maps and spatial planning tools, or regulatory efficiencies.”⁴⁹ In addition to the comments above regarding data and maps, the Coalition urges the Northeast RPB to address regional or other priorities through actions that do not involve the development of a formal regional ocean plan.

In addition to potential impacts on human uses, the development of a regional ocean plan could generate significant questions and confusion about its alignment with existing and functioning regulatory structures—including but not limited to those under the Magnuson-Stevens Fishery Conservation and Management Act and National Environmental Policy Act—that already manage use of the coastal and marine environment. If plans would require new interagency actions, reviews, or consultations, it could also lead to real and consequential delays in agency actions for carrying out their responsibilities. In turn, economic activity (and related jobs and revenues) associated with commercial and recreational use of the region’s ocean and coasts could suffer.

Furthermore, as the National Ocean Council has previously noted, development of a coastal and marine spatial plan would require “significant initial investment of both human and financial resources.”⁵⁰ At the Northeast RPB’s April 2013 meeting, funding constraints were cited as an obstacle to creating a formal Stakeholder Advisory Committee. If funding and other circumstances are such that the RPB lacks

⁴⁸ See Draft Goals for Northeast Regional Ocean Planning, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁴⁹ See Northeast Regional Planning Charter, Page 1, available at http://northeastoceancouncil.org/wp-content/uploads/2012/11/Charter-without-signatories_FINAL.pdf

⁵⁰ See Final Recommendations of the Interagency Ocean Policy Task Force, Page 43, released July 19, 2010, available at http://www.whitehouse.gov/files/documents/OPTF_FinalRecs.pdf.

the capacity to establish a formal Stakeholder Advisory Committee, then it seemingly lacks the ability and should not endeavor to undertake the development of a formal regional ocean plan.

The Northeast RPB should conduct its affairs in a manner that reflects its non-regulatory function. Doing so will allow existing agencies and processes through which ocean and coastal management responsibilities have been assigned by statute and regulation to address effective decision-making, reduce new potential barriers to permitting and project reviews, and ensure that new actions are not taken that could unnecessarily reduce or remove the benefits associated with commercial and recreational activities.

For example, a Northeast RPB priority action in furtherance of effective decision-making should be to address existing inefficiencies by identifying and cataloging flaws in the current system in terms of regulatory agencies and their ability to work with one another. Information on such inefficiencies would be obtained through robust public and user group engagement, including through public comment periods and close collaboration with existing and future potential ocean and coastal resource users, and shared with those agencies and officials who have the statutory responsibilities for managing ocean and coastal resources.

In addition, the Northeast RPB should create formal mechanisms for formal user group input in the process, including through the creation of a Stakeholder Advisory Committee.

The ultimate outcome should include streamlined permitting and project review, based on comprehensive analyses of agency barriers that currently prevent such streamlining, and not empower new entities with regulatory responsibilities.

Draft Goal Two: Healthy Ocean and Coastal Ecosystems

“Develop a planning framework to protect, restore, and maintain healthy ocean and coastal ecosystems that provide social, cultural, spiritual, and economic benefits. Account for changing environmental conditions and new information as it becomes available. Respect the intrinsic value of the ocean, its biodiversity, and act as its steward/caretaker, recognizing humans as part of the ecosystem.”⁵¹

Commercial and recreational interests have a direct stake in healthy ocean and coastal ecosystems and support sound, informed, and science-based policies that support them. Indeed, a number of federal laws are already in effect that directly and indirectly address the protection of ocean and coastal ecosystems.

Such laws include the Coastal Zone Management Act, Clean Water Act, Clean Air Act, National Environmental Policy Act, Magnuson-Stevens Fishery Conservation and Management Act, Oil Pollution Act, Endangered Species Act, Marine Mammal Protection Act, Outer Continental Shelf Lands Act, Coral Reef Conservation Act, National Marine Sanctuaries Act, Antiquities Act, and National Historic Preservation Act, among others.

Application of a new “planning framework” to “protect, restore, and maintain” the region’s ocean and coastal ecosystems by the Northeast RPB would be inconsistent with the entity’s acknowledged non-regulatory status and further cloud the regulatory landscape for the Northeast’s existing and future

⁵¹ See Draft Goals for Northeast Regional Ocean Planning, Page 2, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

ocean and coastal user community. In addition, the contours of and need for the planning framework have not been defined, and since a new planning framework could consist of new processes, structures, and responsibilities among various agencies, without further clarification it is also unclear how it would be established consistent with existing authorities.

Concerns about the regulatory impacts of instituting the “planning framework” are underscored by potential actions to “[i]dentify opportunities within existing regulations and authorities for restoration and protection” and “[w]orking within existing regulations and authorities, use publically-accessible maps and trends to define and characterize important, significant, or valuable areas.”⁵² In addition, the Northeast RPB notes that a potential outcome of this goal is the incorporation of maps of species, habitats, and areas of regional importance “in existing decision making processes.”⁵³ Therefore, new regulatory impacts from instituting the planning framework seem likely to occur.

As another potential outcome, the Northeast RPB refers to “[g]reater recognition and understanding of the connection between riverine quality and healthy ocean and coastal ecosystems.”⁵⁴ The Coalition encourages the Northeast RPB to leave management of inland resources to existing state and federal bodies and processes. To the extent that the Northeast RPB nevertheless seeks to address upland activities, it is imperative that those who live, work, and employ individuals in such areas be informed and engaged at the earliest possible moment regarding the Northeast RPB’s existence and intention to explore potential supposed links between their areas and ocean and coastal waters.

If the Northeast RPB moves ahead with the development of a planning framework, it must account for changing economic as well as environmental conditions if the region’s ocean and coastal ecosystems are to provide “social, cultural, spiritual, and economic benefits.”

In sum, it is unclear how a new planning framework would support healthy ocean and coastal ecosystems in a different and better way than existing mechanisms, how it would be developed in tandem with existing laws, regulations, and processes, and how it would not hinder existing and future commercial and recreational users of Northeast ocean and coastal areas. Therefore, the Coalition urges the Northeast RPB to allow existing entities, mechanisms, and processes to support healthy ocean and coastal ecosystems.

Draft Goal Three: Compatibility Among Past, Current and Future Ocean Uses

“Develop a planning framework to encourage compatibility among past, current and future uses of ocean and coastal waters while minimizing user conflict and impacts to environmental and cultural resources. Recognize local priorities and the connection of ocean uses and the ecosystem to shoreside infrastructure and activities. Facilitate increased understanding and coordination among stakeholders, recognizing the difficulty of resolving certain conflicts.”⁵⁵

For the reasons stated above, the Coalition opposes development of a “planning framework” to address “compatibility among past, present, and future uses of ocean and coastal waters while minimizing user

⁵² See Draft Goals for Northeast Regional Ocean Planning, Page 3, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁵³ See Draft Goals for Northeast Regional Ocean Planning, Page 3, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁵⁴ See Draft Goals for Northeast Regional Ocean Planning, Page 3, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁵⁵ See Draft Goals for Northeast Regional Ocean Planning, Page 3, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

conflict and impacts to environmental and cultural resources.” A number of entities, mechanisms, and processes created by state and federal statutes to address ocean and coastal resource management are already in effect. Establishment of an additional “planning framework” must not become a mechanism that circumvents or obviates the deliberative statutory constructs that currently exist. Furthermore, a new planning framework could have adverse effects on existing and potential future ocean and coastal commercial and recreational uses in the Northeast without providing added value for environmental or cultural resources.

As with Draft Goal Two, the potential for such a planning framework to result in adverse and perhaps unintended consequences for commercial and recreational ocean and coastal uses in the region is highlighted by several potential actions that are included in the draft goal document.

For example, the Northeast RPB states that potential actions to “[i]dentify and where possible map existing uses...and related infrastructure,” “[i]dentify and map cultural and historic sites,” and “[e]nhance the viability of and compatibility among new and existing ocean uses” could help further outcomes including “minimiz[ing] conflicts and informing siting of new uses” and “information for preserving important cultural and historic sites and traditions.”⁵⁶ It is unclear how such actions and outcomes would not result in new commercial and recreational access limitations or conditions.

As another potential outcome, the Northeast RPB refers to “[g]reater recognition and understanding of the connection between inland resource use and associated impacts on ocean resources.”⁵⁷ To the degree that the Northeast RPB intends to address inland activities, those who live or operate in the region’s inland areas should be informed of such intentions and provided with adequate engagement opportunities.

To be sure, certain potential actions under this draft goal may yield positive results. For example, assessing trends in maritime commerce, commercial fishing, and ocean-based renewable energy, as well as assessing the potential for offshore aquaculture, current and foreseeable uses of seafloor material, and existing shore-side infrastructure and related improvement needs could be beneficial. Any such assessments should be expanded to include all ocean and coastal resources and potential future uses, and they should be properly scoped and defined to meet regional goals and priorities developed through broad stakeholder consensus.

If not used as a building-block to construct a new regulatory layer, these assessments could improve the region’s ocean and coastal economy and environment by helping to further potential outcomes such as a more complete and thorough “[a]ssessment of the regional coastal and ocean economy,” “[c]onsideration of regional infrastructure needs,” and “[i]dentification of priority needs for shoreside infrastructure upgrades.”⁵⁸

However, if the information is used in a way that has the ultimate effect of introducing new uncertainties for existing and potential future commercial and recreational interests in the Northeast by

⁵⁶ See Draft Goals for Northeast Regional Ocean Planning, Pages 3 and 4, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁵⁷ See Draft Goals for Northeast Regional Ocean Planning, Page 3, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

⁵⁸ See Draft Goals for Northeast Regional Ocean Planning, Page 3, available at <http://northeastoceancouncil.org/wp-content/uploads/2012/11/Draft-Goals-for-Public-Review.pdf>.

introducing new and unnecessary regulatory hurdles or obstacles to access, the outcome for the region could be far different.

As with Draft Goal Two, the Coalition urges the Northeast RPB to allow existing entities, mechanisms, and processes to govern the multiple ocean and coastal uses that exist rather than develop a new “planning framework.”

In the event that the RPB pursues development of a planning framework, it is essential that the whole host of all existing and potential future commercial and recreational uses is fully accounted for, addressing the needs of, among others, the commercial fishing industry, needs for current and future maritime transportation routes, the concentration of and potential for recreational fishing and boating, the opportunity and need for offshore renewable energy, the possibility of the existence of offshore conventional energy and strategic mineral resources, the need for future energy infrastructure such as pipelines, transmission corridors, power plants, and refineries, and the needs of the aquaculture industry.

Furthermore, any Northeast RPB effort to develop and implement an ecosystem-based plan or planning framework will require adjustments to its anticipated schedule for completion. While the RPB activity timeline notes that by 2015 it will have achieved implementation with ecosystem-based management,⁵⁹ this timeline must be altered if the RPB’s actions are to be grounded in sound science and data.

At the present state of knowledge, practical experience with the design and implementation of monitoring programs that enable ecosystem-based management is limited, especially on the broad spatial and temporal scales that are required to support informed ocean and coastal planning decisions.

Therefore, significant thought and time must be invested in developing data collection, monitoring, and analysis methodologies that can deliver reliable and sound information. In addition, effective data gathering and monitoring require that the goals of any ecosystem-based management effort first be collectively defined through public processes. Until stakeholders understand what the planning framework or plan will look like and what associated efforts for ecosystem-based management are supposed to achieve, it will be difficult to determine how to efficiently and effectively approach and fund critical data collection and management efforts.

To that end, a concrete proposal specific to the Northeast must be developed which outlines the envisioned goals of ecosystem-based management and efforts associated with data collection, quality control, analysis, and interpretation. Furthermore, since “scientific” information could be used in attempts to influence public perception, the plan must also provide mechanisms to ensure the scientifically sound use of the obtained information.

At a minimum, the proposal should include the following:

- A statement outlining the goals and objectives envisioned for ecosystem-based management, as determined by the stakeholder community through public processes;
- Data collection and measurement programs outlining which parameters (variables) should be monitored, for what purpose, how, where, and how often;

⁵⁹ See Northeast Regional Ocean Planning Timeline: 2012-2015, available at <http://www.northeastoceanCouncil.org/comment-on-the-draft-ocean-planning-goals/>.

- Protocols for data quality control to ensure measurements are technically defensible and bound by acceptable uncertainty limits before they are released for analysis, model input, and interpretation; and
- Protocols outlining the anticipated use of the information to ensure the application of scientifically proven analysis methods and the dissemination of peer-reviewed, statistically sound information

An initial proposal that addresses these points should be finalized before a detailed assessment is made of the resources needed for its implementation, including, for example, sampling equipment, laboratories, and marine vessel requirements.

In addition, the Northeast RPB must ensure that all impacted stakeholders, including the Northeast commercial and recreational user community, buy in to the initiative and are involved and committed at *every* stage of the process: the identification of goals, the development and design of effective monitoring programs, the implementation of such programs on cross-sectoral scales, the continuous analysis of data outflow, and the alignment of adaptive management techniques with the observations.

In addition, defining and realizing realistic and achievable monitoring efforts, and identifying actual versus perceived problems, will require that qualified local scientists and scientific experts from industry stakeholders are brought in to work together with Northeast RPB representatives.

Therefore, a regional ocean planning framework, plan, or other actions dependent on ecosystem-based management must not be implemented before the pertinent data is appropriately collected, analyzed, and made publicly available. Such activities will take time, and their completion would be constrained by the imposition of arbitrary deadlines.

Lastly, any observing, mapping, and other data collection activities carried out must recognize limits in the ability of maps and forecasting/modeling tools to account for variations in conditions across geographic areas and reflect differences in operations among specific activities and users. Such activities should also have the ability to adapt to new information about ecosystems, alternative uses of ecosystem resources and services, and economic activities that drive quality of life in the region.

CONCLUSION

While the Coalition appreciates the opportunity to provide comments on the draft goals for Northeast regional ocean planning, additional information is needed to allow all those with interests in the region to provide the Northeast RPB with informed comments.

In addition, structural mechanisms that provide a formal means for commercial and recreational interests and local officials to adequately interact with and advise the Northeast RPB on its potential future activities should be in place before the Northeast RPB moves any further ahead.

Especially during these difficult economic times, it is essential that the output of the Northeast RPB reflects the needs and desires of those who live and employ citizens of this region, be developed in a thoughtful, transparent, and deliberate manner that is based on realities on the ground rather than artificial timelines, and not lead to the creation of new and unnecessary obstacles to access for existing and future commercial and recreational activities that provide economic and societal benefits for the region. The Coalition looks forward to working with the Northeast RPB to help ensure such an outcome.

Sincerely,

Subject: Comments on Draft October 23, 2013 NE RPB SAP

The following comments are submitted on behalf of the Cape Cod & the islands Group- Sierra Club. The New England Chapters of the Sierra Club may submit comments through NEOAN (New England Ocean Action Network), while the national Marine Action Team and Beyond Coal Ocean Wind Energy Campaign may submit additional comments. Dr. David Dow will attend the January 22-23 RPB meeting in Cambridge, Ma. and may offer some verbal comments from these other grassroots/national Sierra Club entities.

* Goal 1: Effective Decision Making

Since the state/federal jurisdictional waters adjacent to Cape Cod will include the Cape Wind Project in Nantucket Sound and the 1350 square mile BOEM (Bureau of Ocean Energy Management) wind farm off of Marthas Vineyard, we have concerns about where this power will be brought onshore and connected to the Regional Electric Grid, since Cape Cod has limited excess transmission capacity. Since BOEM rarely has public information meetings on Cape Cod and the Cape Wind Project has been quite controversial amongst local ENGOS/Animal Rights Groups, we have had limited opportunity to comment on the power line transmission challenges that we face from offshore wind farms and the permitting nightmare that we would face on Cape Cod to construct new power transmission lines. The offshore wind farms have faced opposition from commercial fishermen/women and other traditional users (aquaculture; recreation; transportation; etc.). The RPB SAP public hearing in Barnstable Village was poorly advertised by the Cape Cod Commission and there was no media coverage of the hearing. The New England Fishery Management Council is developing an Omnibus Habitat Amendment (OHA) that may include some Habitat Areas of Particular Concern in waters adjacent to Cape Cod. The Cape Cod Commission has organized a Clean Water Act section project to address our wastewater challenges at the watershed level. The CC&I Group has participated in the Waquoit/Popponesset Bay Working Group. We are organizing a public meeting in early March to address wastewater costs/benefits and environmental justice challenges.

Barnstable and Falmouth are considering ocean outfalls for treated sewage effluent from upgraded, existing wastewater management plants. Ma. DEP has indicated to Falmouth that sewerage of 6 additional watersheds of nitrogen impacted coastal embayments may be required if the pilot projects (ecotoilets; inlet widening; oyster aquaculture; permeable reactive barriers; fertilizer bylaws; green infrastructure for storm water; etc) in the Falmouth Comprehensive Wastewater Management Plan can't meet the TMDL targets for Total Nitrogen within the impacted embayments. Cape Cod waters are already being impacted by climate change which has caused a regime shift in the marine biota and their habitats. In coastal areas on land relative sea level rise and flooding from extreme weather events has disrupted coastal geology and infrastructure and pose challenges for climate adaptation; community resilience and emergency response planning. Our wastewater mitigation challenges arise from population growth and increased development in coastal watersheds which has lead to eutrophication of coastal embayments by nitrogen and freshwater ponds by phosphorus. Septic systems are a source of contaminants of emerging concern in our private and public water supplies and some of the cecs can bioaccumulate in the marine food chain if the treated sewage effluent is released at ocean outfalls. The Cape Cod & the Islands Group has been doing public outreach on the Sierra Club's recently released cec fact sheet (Dr. Dow was on the drafting team). Our Group has also developed a webinar on climate change, extreme weather events and emergency responses (based upon the lessons learned from Blizzard Nemo). This webinar has been presented to EJ and community of faith groups.

Thus there are interconnections between marine waters and coastal watersheds that require planning and regulatory integration between local/state/federal officials with involvement of public stakeholders. Having the RPB SAP meetings and hearings during the day when many people work limits much of the public engagement to policy wonks and groups with paid staff/retired volunteers. By contrast the CC&I Group has done outreach on the cec fact sheet at Town Public Health and Safety Fairs on Saturdays and with communities of faith organizations to spread the word on ways to reduce homeowners exposure to these largely unregulated toxic chemicals. NROC and the RPB contractors and staff should do the same !!! The five objectives under this goal are very broad and generic, so

that the revised SAP should add some more specifics to address Sierra Club concerns and those from other stakeholders impacted by the "Effective Decision Making" goal.

* Goal 2: Healthy Ocean and Coastal Ecosystems

We agree with the general philosophy outlined under Objective 1 (Characterize the Region's Ecosystem and Economy), but since our socioeconomic/environmental system is in a state of flux from a variety of factors (climate change; eutrophication; overfishing; invasive species; development and population growth in coastal watersheds; etc.) there is a need to integrate the science and technological advances with public policy changes that improve sustainability, while allowing compatible uses (goal of NOP). The SAP might want to consider an ecosystems-based, adaptive management framework for connecting the science/technology phases with changes in planning and public policy. EPA's Waquoit Bay Watershed Ecological Risk Assessment project might provide a good site for a pilot test of this concept, since many scientific studies have occurred here and it is one of the section 208 WG watersheds. Another practical problem is that monitoring data, scientific studies and maps need to be integrated into products accessible to the public and stakeholders. It is not apparent from the RPB meetings that we have participated in that this is the case.

Even though the federal/state agencies are responsible for carrying out permitting and regulatory authority in their areas of oversight/legislative authority, a major constraint is that these regulations are based upon science from the 1980's-1990's. We need to develop more nimble ways to incorporate that data and information from the actions 1-1 to 1-8 into the policy and regulatory pathway. NOAA Fisheries and the New England Fishery Management Council face this challenge in incorporating climate change into the population dynamic models that establish the TACs (Total Allowable Catches) that set the quotas for groundfish sectors. The NEFMC ecosystem indices won't be developed until 2015 which is when the RPB SAP is supposed to be submitted. Since the Northeast Fisheries Science Center's Ecosystems Assessment Group has already seeing climate-change induced effects in the Gulf of Maine, we shouldn't have to wait until 2015 to make policy or regulatory changes. There is a lot of inertia in the Magnuson-Stevens Sustainable Fisheries Act implementation process, so that changes on the water may require an additional 3-4 years. The NEFMC Omnibus Habitat Amendment has been under development for 7-8 years and is still not completed. Other federal/state agencies face similar problems as their resources (dollars and people) are reduced in an era of financial austerity. It is not clear how actions 1-1 through 1-8 will be accomplished in this fiscal situation.

Objectives 2 through 4 seem like good ideas, but the description is so generic it is impossible to make comments. The devil will obviously be in the details.

Goal 4: Compatibility Among Past, Current and Future Uses

Since grassroots entities (Sierra Club Chapters and Groups) have to take positions compatible with national Club policies/positions, the Marine Action Team and Beyond Coal Ocean Wind Energy Campaign should comment on Objectives #1 through 3. This requires balancing the needs to conserve wild places, wild things (using marine reserves as one tool) with generation of green electricity from ocean wind farms for transmission to the regional electric grid to reduce greenhouse gases. The Sierra Club has a Sustainable Fisheries Policy (SFP) which helps guide its conservation of marine biota and their habitats. This national policy used the Massachusetts Chapter Policy as a template and the Cape Cod Group helped the Chapter develop its SFP. Climate change is the Sierra Club's top conservation endeavor and includes numerous sub-campaigns. The national activists can address these concerns better than the CC& I group can. Many of the public comments at the RPB meetings are focused on this goal (how to balance past, current and future uses amongst diverse stakeholders).

Thanks for the opportunity to comment on the October 23, 2013 Strategic Action Plan draft.

Dr. David Dow
Treasurer, Cape Cod & the Islands Group- Sierra Club
18 Treetop Lane East Falmouth, Ma. 02536

Document 4.1
Bureau of Ocean Energy
Management Fact Sheet:
Renewable Energy Program

Renewable Energy Program

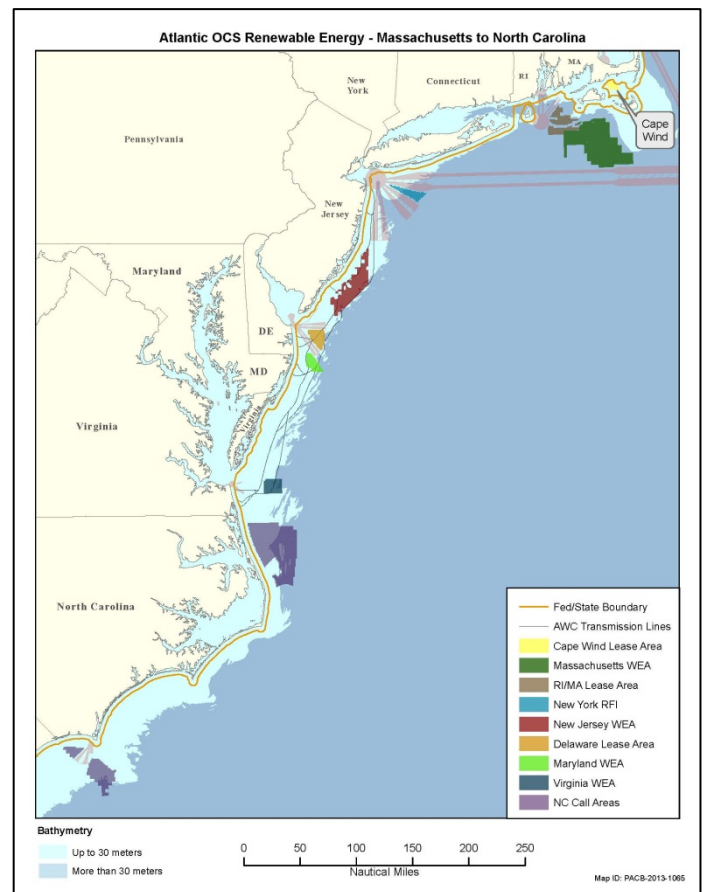

In 2009, President Barack Obama announced the final regulations for the Outer Continental Shelf (OCS) Renewable Energy Program, which was authorized by the Energy Policy Act of 2005 (EPAAct). These regulations provide a framework for issuing leases, easements and rights-of-way for OCS activities that support production and transmission of energy from sources other than oil and natural gas. Department of the Interior's Bureau of Ocean Energy Management (BOEM) is responsible for overseeing offshore renewable energy development in Federal waters. Since the regulations were enacted, BOEM has worked diligently to oversee responsible renewable energy development.

Commercial Leasing

A commercial lease gives the lessee the exclusive right to seek BOEM approval for the development of a leasehold. It does not grant the right to construct any facilities. Since 2009, BOEM's Office of Renewable Energy Programs (OREP) has issued five commercial wind energy leases offshore, including those issued to the following companies:

- Cape Wind Associates, LLC, offshore Massachusetts
- Bluewater Wind Delaware, LLC, offshore Delaware
- Deepwater Wind New England, LLC, offshore Rhode Island/Massachusetts (two leases)
- Virginia Electric and Power Company (*dba* Dominion Virginia Power), offshore Virginia

Additionally, BOEM has initiated auction planning for areas offshore Maryland (two leases), New Jersey (two leases), and Massachusetts (up to five leases), and is in the early planning stages for areas offshore North Carolina, New York, Oregon, and Hawaii.

Map: Wind Energy and Call Areas on Atlantic OCS

Limited and Research Leasing

In November 2007, BOEM (then known as Minerals Management Service) announced an Interim Policy to jumpstart data collection and technology testing activities on the OCS prior to the promulgation of final regulations. Leases issued under the Interim Policy have a five year term and provide no subsequent rights to commercial development. To date, BOEM issued four Interim Policy leases, three offshore New Jersey and one offshore Delaware. Two Interim Policy lessees have deployed meteorological buoys off the coast of New Jersey. The other two leases were relinquished in 2012. BOEM anticipates issuing a limited lease during FY 2014 for a project proposed offshore Florida and is

currently considering another lease offshore Georgia under the Interim Policy.

In addition, BOEM received the following unsolicited research lease applications:

- Two research lease requests from the Virginia Department of Mines, Minerals and Energy (DMME). In response to both requests, BOEM determined there was no competitive interest and expects to execute the research leases in 2014.
- A research lease request for a wave energy test site in Federal waters offshore Oregon was submitted to BOEM by Oregon State University. BOEM expects to determine whether competitive interest exists in the area proposed for this project in 2014.

Right-of-Way Grants

BOEM has the authority to issue right-of-way grants that allow developers to build electricity transmission lines that connect renewable energy installations to the onshore electrical grid. During FY 2012, BOEM initiated two right-of-way grant processes:

- A proposed transmission backbone project that would run from Virginia to New York (Atlantic Wind Connection), and
- A cable project that would support a wind project to be located in Rhode Island State waters (Block Island Transmission System).

BOEM expects to receive additional unsolicited applications for right-of-way grants in the near future.

Renewable Energy on the
Outer Continental Shelf

Renewable Energy on the Outer Continental Shelf

In 2009, President Barack Obama announced the final regulations for the Outer Continental Shelf (OCS) Renewable Energy Program, which was authorized by the Energy Policy Act of 2005 (EPAct). These regulations provide a framework for issuing leases, easements and rights-of-way for OCS activities that support production and transmission of energy from sources other than oil and natural gas. Department of the Interior’s Bureau of Ocean Energy Management (BOEM) is responsible for offshore renewable energy development in Federal waters and anticipates future development on the OCS from three general sources:

1. Offshore Wind Energy

Wind turbines have been installed offshore a number of countries to harness the energy of the moving air over the oceans and convert it to electricity. Offshore winds tend to flow at higher sustained speeds than onshore winds, making turbines more efficient. In June 2013, President Obama laid out a comprehensive Climate Action Plan that challenged Department of the Interior to permit 20 gigawatts of clean energy on public lands by 2020. Offshore wind development could play a critical role in achieving that goal, given that offshore wind in the United States could produce over 4,000 gigawatts of energy. To date, BOEM has issued five commercial wind energy leases on the OCS, including those offshore Delaware, Massachusetts, Rhode Island, and Virginia (see map). BOEM is considering a number of other commercial wind energy planning areas as well as research lease requests and transmission proposals.

Map: Commercial Wind Energy Lease Areas

2. Ocean Wave Energy (Hydrokinetic)

There is tremendous energy in ocean waves. Wave power devices extract energy directly from the surface motion of ocean waves. A variety of technologies have been proposed to capture that energy, and some of the more promising designs are undergoing demonstration testing. The Northwestern coast of the United States has especially high potential for wave energy development and is one of only a few areas in the world with abundant, available wave power resources. BOEM is currently considering a proposal to test technology that would use wave energy offshore Oregon.

3. Ocean Current Energy (Hydrokinetic)

Ocean currents contain an enormous amount of energy that can be captured and converted to a usable form. Some of the ocean currents on the OCS are the Gulf Stream, Florida Straits Current, and California Current. Submerged water turbines, similar to wind turbines, may be deployed on the OCS in the coming years to extract energy from ocean currents. BOEM is currently considering a proposal to test technology that would use the Florida Straits Current to generate electricity.

Document 4.3
Bureau of Ocean Energy
Management Fact Sheet:
Wind Energy Commercial
Leasing Process

Wind Energy Commercial Leasing Process

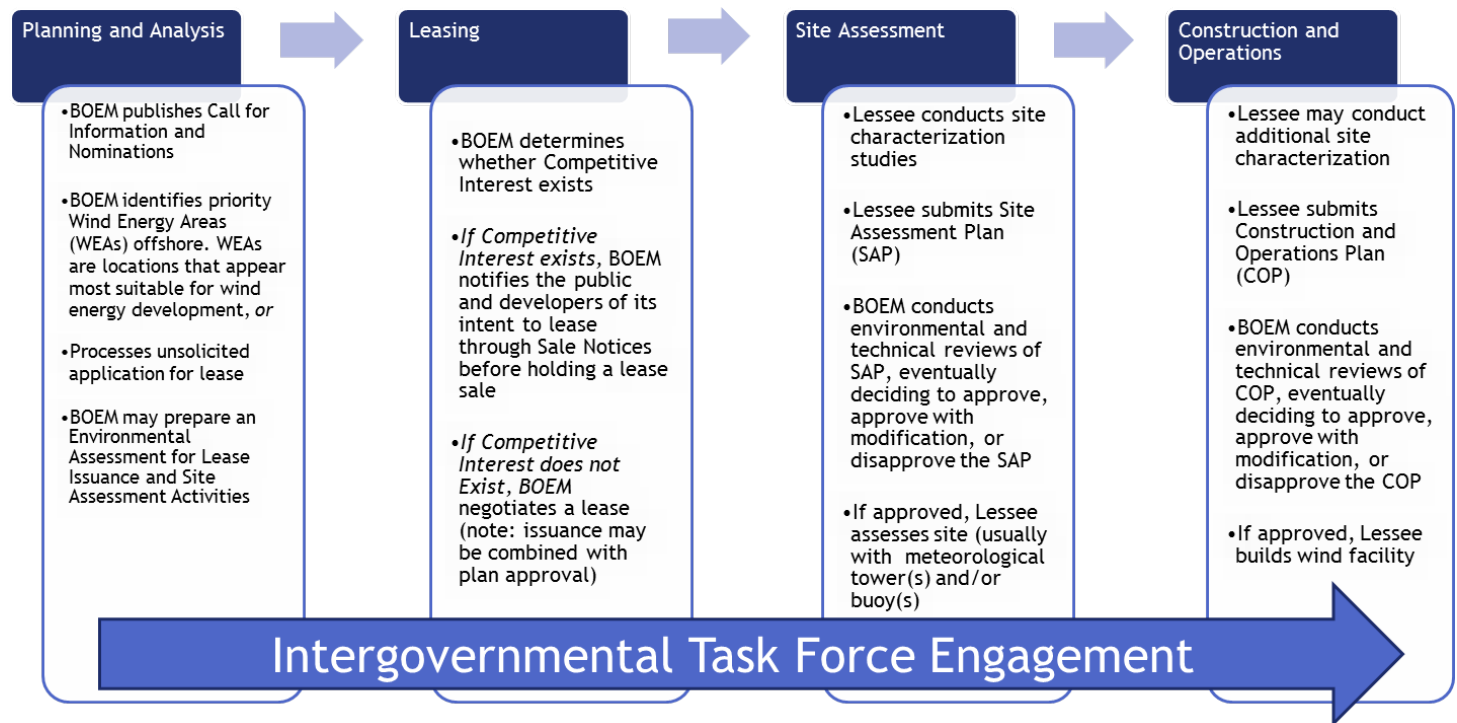

In 2009, President Barack Obama announced final regulations for the Outer Continental Shelf (OCS) Renewable Energy Program, which was authorized by the Energy Policy Act of 2005 (EPA). Department of the Interior’s Bureau of Ocean Energy Management (BOEM) is responsible for implementing these regulations, which provide a framework for issuing leases, easements and rights-of-way for OCS activities that support production and transmission of renewable energy, including offshore wind, ocean wave energy, and ocean current energy.

Importance of Stakeholder Engagement

To help inform BOEM’s planning and leasing process, BOEM has established Intergovernmental Task Forces in states that have expressed interest in development of offshore renewable energy. The role of each Task Force is to collect and share relevant information that would be useful to BOEM during its decision-making process. To date, BOEM Intergovernmental Task Forces have been established in Maine, Massachusetts, Rhode Island, New York, New Jersey, Delaware, Maryland, Virginia, North Carolina, South Carolina, Oregon and Hawaii. Task Force meetings have helped identify areas of significant promise for offshore development and provided early identification of, and steps toward resolving, potential conflicts.

The Process

BOEM’s renewable energy program occurs in four distinct phases: (1) planning and analysis, (2) lease issuance, (3) site assessment, and (4) construction and operations. The figure below outlines BOEM’s process for authorizing wind energy leases.

Planning and Analysis. The Planning and Analysis phase seeks to identify suitable areas for wind energy leasing consideration through collaborative, consultative, and analytical processes that engage stakeholders, tribes, and State and Federal government agencies. This is the phase when BOEM conducts environmental compliance reviews and consultations with Tribes, States, and natural resource agencies.

Leasing. The Leasing phase results in the issuance of a commercial wind energy lease. Leases may be issued either through a competitive or noncompetitive process. A commercial lease gives the lessee the exclusive right to subsequently seek BOEM approval for the development of the leasehold. The lease does not grant the lessee the right to construct any facilities; rather, the lease grants the right to use the lease area to develop its plans, which must be approved by BOEM before the lessee can move on to the next stage of the process.

Site Assessment. The Site Assessment phase includes the submission of a site assessment plan (SAP), which contains the lessee's detailed proposal for the construction of a meteorological tower and/or the installation of meteorological buoys on the leasehold. The lessee's SAP must be approved by BOEM before it conducts these "site assessment" activities on the leasehold. BOEM may approve, approve with modification, or disapprove a lessee's SAP. It is also during this phase that the lessee would conduct site characterization surveys and studies (e.g., avian, marine mammal, archeological).

Construction and Operations. The Construction and Operations phase consists of the submission of a Construction and Operations Plan (COP), which is a detailed plan for the construction and operation of a wind energy project on the lease. BOEM conducts environmental and technical reviews of the COP and decides whether to approve, approve with modification, or disapprove the COP. Prior to the end of the lease term, the developer must submit a plan to decommission facilities.

Need for Ongoing Research

The Renewable Energy Program is supported by a substantial investment in research and data collection. The areas that are appropriate for renewable energy development have likely never been studied for such development and, in some cases, there is information lacking about the physical and biological environment. BOEM engages the Task Forces, as well as a broad spectrum of agencies, universities and other stakeholders, to identify the critical data gaps and independently or through partnerships seeks to fund studies through its Environmental Studies Program. The need for continuing to pursue information to ensure access to the OCS for renewable energy development and to ensure that such development is environmentally appropriate is a high priority for BOEM. To learn more about BOEM's renewable energy research, go to <http://www.boem.gov/Environmental-Stewardship/Environmental-Studies/Renewable-Energy/Renewable-Energy.aspx>. In addition, BOEM's sister agency, Bureau of Safety and Environmental Enforcement (BSEE), conducts research on technology and engineering issues associated with renewable energy projects in the OCS. To learn more about BSEE's renewable energy related research, go to <http://www.bsee.gov/Research-and-Training/Technology-Assessment-and-Research.aspx>.

Document 4.5
Bureau of Ocean Energy
Management: Renewable
Energy Research-Ongoing
Studies

Ongoing Studies

Social, Economic, and Cultural Resources: Studies to identify human use and space-use conflicts in coastal and offshore waters, as well as on the OCS, between renewable energy development, current users of ocean waters, and potential new uses of the OCS, and to identify ways to mitigate those conflicts.

- Renewable Energy Visual Evaluations
- Development of Mitigation Measures to Address Potential Use Conflicts between Commercial Wind Energy Lessees/Grantees and Commercial Fishers on the Atlantic Outer Continental Shelf
- Atlantic Offshore Wind Energy Development: Public Attitudes, Values, and Implications for Recreation and Tourism
- Developing Protocols for Reconstructing Submerged Paleocultural Landscapes and Identifying Ancient Native American Archaeological Sites in Submerged Environments
- Socio-Economic Impact of OCS Wind Development on Fishing
- Battle of the Atlantic
- Atlantic Outer Continental Shelf (OCS) Cultural Resources Survey and Archaeological Inventory Geographic Information System
- Studies Toward Fulfillment of the OCS Lands Act Offshore North Carolina: Stakeholder use and Essential Fish Habitat in Wind Energy Call Areas

Birds: Studies to determine the distribution and abundance of birds on the Outer Continental Shelf.

- Surveying for Marine Birds in the Northwest Atlantic
- Acoustic Monitoring of Temporal and Spatial Abundance of Birds Near Structures on the OCS of the Atlantic and Gulf of Mexico
- Compendium of Avian Information: Part 2
- Determining Offshore Use by Diving Marine Birds Using Satellite Telemetry
- Pilot Study: Tracking Offshore Occurrence of Common Terns and American Oystercatchers with VHF Arrays
- Integrative Statistical Modeling and Predictive Mapping of Seabird Distribution and Abundance on the Atlantic Outer Continental Shelf
- Aerial Surveys for Roseate Terns

Marine Mammals and other Protected Species: Studies to assess the distribution of marine mammals and other protected species.

- Atlantic Marine Assessment Program for Protected Species (AMAPPS)
- Field Surveys and Marine Resource Characterization for Offshore Wind Energy Planning in the Massachusetts Wind Energy Area

Environmental Effects: Studies to evaluate the effects in the marine environment on fish, marine mammals, and sea turtles.

- Fishery Physical Habitat and Epibenthic Invertebrate Baseline Data Collection
- Southern New England Cooperative Ventless Trap Survey
- Characterization and Potential Impacts of Noise Producing Construction and Operation Activities on the OCS (Part I)
- Characterization & Potential Impacts of Noise Producing Construction & Operations Activities on the OCS (Part II)

Information Synthesis and Data Management: Studies to gather existing information about human and ecological communities and physical oceanographic processes that affect shelf ecosystems and potentially sensitive areas.

- Ecospatial Information Database (ESID) U.S. Atlantic Region
- Synthesis, Analysis, & Integration of Air Quality & Meteorological Data for the Atlantic Region

Completed Studies

Social, Economic, and Cultural Resources: Studies that identify human use and space-use conflicts in coastal and offshore waters, as well as on the OCS, between renewable energy development, current users of ocean waters, and potential new uses of the OCS, and to identify ways to mitigate those conflicts.

- Inventory and Analysis of Archaeological Site Occurrence on the Atlantic Outer Continental Shelf
- Identification of OCS Renewable Energy Space-Use Conflicts and Analysis of Potential Mitigation
- Atlantic Region Wind Energy Development: Recreation and Tourism Economic Baseline Development
- Evaluation of Visual Impact on Cultural Resources/Historic Properties: North Atlantic, Mid-Atlantic, and Florida Straits
- Energy Market and Infrastructure Information for Evaluating Alternate Energy projects for the OCS Atlantic and Pacific Regions - Volume 1: Technical Report
- Fishing, Diving, and Ecotourism Stakeholder Uses and Habitat Information for North Carolina Wind Energy Call Areas
- Collaborative Archaeological Investigations and Sound Source Verifications within the Massachusetts Wind Energy Area

Biological Effects: Studies of the biological effects of offshore renewable energy.

- Compendium of Avian Occurrence information for The Continental Shelf Waters Along The Atlantic Coast of The United States: Final Report (Database Section-Seabirds)
- Determining Night Time Distribution of Long-tailed Ducks Using Radio Telemetry
- New Insights and New Tools Regarding Risk to Roseate Terns, Piping Plovers, and Red Knots from Wind Facility Operations on the Atlantic Outer Continental Shelf
- High-resolution Aerial Imaging Surveys of Marine Birds, Mammals, and Turtles on the US Atlantic Outer Continental Shelf—Utility Assessment, Methodology Recommendations, and Implementation Tools
- Building a Database to Assess the Relative Vulnerability of Migratory Bird Species to Offshore Renewable Energy Projects on the Atlantic OCS
- Determining Nocturnal Locations, Breeding Ground Locations, and Genetic Structure of Long-Tailed Ducks Wintering in Nantucket Sound
- Effects Of EMF From Transmission Lines On Elasmobranchs And Other Marine Species
- Effects Of Pile Driving Sounds On Non-Auditory Tissues Of Fish
- Underwater Hearing Sensitivity in the Leatherback Sea Turtle (*Dermochelys coriacea*): Assessing the Potential Effect of Anthropogenic Noise

Information Synthesis and Data Management: Studies to gather existing information about human and ecological communities and physical oceanographic processes that affect shelf ecosystems and potentially sensitive areas. Studies creating comprehensive searchable database's of geo-referenced ecological information resources to support ecosystem-based management.

- Literature Search and Data Synthesis for Marine Mammals and Sea Turtles in the US Atlantic from Maine to the Florida Keys
- Worldwide Synthesis and Analysis of Existing Information Regarding Environmental Effects of Alternative Energy Uses on the OCS and Workshop
 - Worldwide Synthesis Report
 - Workshop Summary
- Literature Synthesis for the North and Central Atlantic Ocean
- Atlantic Wind Energy Workshop-July 12-14,2011
 - Workshop Summary
- Oregon Marine Renewable Energy Environmental Science Conference Proceedings
- South Atlantic Information Resources: Data Search and Literature Synthesis
- Information Synthesis on the Potential for Bat Interactions with Offshore Wind Facilities
- Offshore Wind Energy Development Site Assessment and Characterization: Evaluation of the Current Status and European Experience

Northeast
Regional Planning Body
Charter

Northeast Regional Planning Body Charter

Introduction

Presidential Executive Order 13547, signed in July 2010, established our Nation's first *National Policy for Stewardship of the Ocean, our Coasts, and the Great Lakes*. The National Ocean Policy (NOP) encourages a comprehensive, adaptive, integrated, ecosystem-based, and transparent spatial planning process based on sound science for analyzing current and anticipated uses of ocean and coastal areas. The approach is driven by the formation of Regional Planning Bodies in nine regions of the United States. Northeast Regional Planning Body (RPB) members will develop planning products driven by the specific needs of their geography and building on existing efforts. Depending on how the NE RPB decides to proceed, these products could include a formal regional ocean plan or a set of deliverables such as improved data, maps and spatial planning tools, or regulatory efficiencies.

The NE RPB includes federal, tribal, state, and New England Fishery Management Council members. This charter describes the purpose, participants, and a preliminary delineation of roles and responsibilities for members and the Northeast regional ocean planning process. While the charter serves as an express commitment for NE RPB members to work constructively and cooperatively together, it is also a helpful reference for the public and partners seeking information about the roles and functions of this planning group.

It is important to note that the NE RPB is not a regulatory body and has no independent legal authority to regulate or otherwise direct federal, state, tribal, or local entities; nor does membership constitute a delegation of decision-making or legal authority to NE RPB members. Further, participation on the NE RPB does not commit any non-federal NE RPB member, or non-federal government represented by the member, to adopt resulting products or plans.

Purpose and Scope of Activity

The NE RPB provides a forum for information sharing and coordination of regional ocean planning activities from the Gulf of Maine to Long Island Sound. The NOP provides further guidance on the geographic scope of the planning area:

- Includes the territorial sea, the exclusive economic zone, and the Continental Shelf
- Extends landward to the mean high-water line

- Includes inland bays and estuaries
- Additional inland waterways may be included as the RPB deems appropriate
- Privately owned lands as defined by law are excluded

The NE RPB will agree on a manageable geographic scope based on a set of regional goals and measurable objectives that provide a clear direction, outcomes, and timeframes for completion. The RPB will also develop a formal regional work plan that describes an agreed upon strategy for completing deliverables. Through a capacity assessment, the RPB will identify existing activities to build on related efforts in the region. This work should be leveraged and expanded to advance a regional approach while not duplicating or hindering existing and ongoing efforts.

The NE RPB will consult scientists, technical experts, and those with traditional knowledge of or expertise in coastal and marine sciences and other relevant disciplines to ensure that regional ocean planning is based on sound science and the best available information. The RPB will also ensure there is frequent and regular engagement of partners and the public throughout the process, including development, adoption, implementation, evaluation, and adaptive management phases of its work. During this time, RPB members will discuss their respective legal authorities, requirements, and processes and how they can be better applied in the context of regional ocean planning.

Mission

By committing to this process, NE RPB members agree to participate in regional ocean planning as a framework for improved coordination and decision making. This cooperative regional approach will build partnerships that encourage sharing of information and best practices, help foster mutually agreed upon goals and objectives, and make more effective use of scarce resources by focusing those resources on the highest regional priorities.

NE RPB Members and Roles

NE RPB members represent entities from six states, ten federal agencies, ten federally recognized tribes, and the New England Fisheries Management Council (Appendix A). The National Ocean Council (NOC) convened and organized NE RPB federal members and invited Governors, tribal leadership, and a member of the New England Fisheries Management Council (NEFMC) to participate in the planning effort. Ultimately, state authorities and tribal leadership determined their own membership, identifying staff that typically have a role in

providing technical assistance, management, or regulatory review of ocean and coastal resources and activities. Any NE RPB member vacancy will be filled in the same manner in which the original appointment was made.

Members who are unable to participate in NE RPB activities can identify delegates to participate on their behalf. Delegates will serve the role and function of their member and communicate key information and points of decision back to their member. In addition to NE RPB membership described below, a formal NE RPB Roster can be viewed in Appendix A.

State Members

State members will represent their respective state interests, mandates, and goals in the overall regional planning process. The state members are typically an elected official, or the elected official's designated employee authorized to act on his or her behalf on ne RPB matters. Each New England state Governor retains the authority to designate up to two members to serve as official representatives on the RPB from his or her respective state.

Entities include:

State of Connecticut

State of Rhode Island

Commonwealth of Massachusetts

State of New Hampshire

State of Maine

State of Vermont

Tribal Members

The NE RPB structure acknowledges the sovereign status of ten Northeast federally-recognized American Indian Tribal Governments. Each federally-recognized tribe is invited to have its own seat on the NE RPB and represent their respective tribal interests, mandates, and goals in the regional ocean planning process. The tribal representative must be an elected or duly appointed tribal official, or the tribal official's designated employee authorized to act on his or her behalf on NE RPB matters.

The National Ocean Policy explicitly recognizes the importance of enhanced coordination with federally-recognized tribal governments, specifically as it pertains to preservation of the Nation's heritage, including historical and cultural values. As partners in the regional planning process, tribes will be called upon to share not only their traditional knowledge, but also their natural resource management expertise. Through this partnership, tribal members can help all

participants better understand treaty rights, traditional knowledge of marine ecosystems, and tribal scientific capacity.

Entities Include:

Aroostook Band of Micmac Indians
Houlton Band of Maliseet Indians
Mashantucket Pequot Tribe of Connecticut
Mashpee Wampanoag Tribal Council
Mohegan Indian Tribe of Connecticut
Narragansett Indian Tribe of Rhode Island
Passamaquoddy Tribe - Indian Township Reservation
Passamaquoddy Tribe - Pleasant Point Reservation
Penobscot Indian Nation
Wampanoag Tribe of Gay Head (Aquinnah)

Federal Members

Each participating federal agency will identify a member to serve on the NE RPB and represent their respective agency's mandates and goals in the planning process. Federal members are subject-matter experts with sufficient seniority and expertise to enable them to represent their agencies on the NE RPB and have the authority to act on their respective agency's behalf. They will provide data, resources, and tools that may be applicable to regional planning challenges and help identify legal authorities relevant to their participation. As the NE RPB gets more specific with the development of its work plan, these members will also involve the most appropriate federal colleagues with needed expertise. Federal RPB members will work to ensure coordination of federal agency actions and programs in support of Northeast ocean planning goals and objectives. It is recognized and agreed by all parties in this charter that federal agencies cannot direct actions by those decision-makers responsible for such programs or activities.

Entities Include:

Federal Energy Regulatory Commission
Joint Chiefs of Staff
U.S. Department of Agriculture
U.S. Department of Commerce
U.S. Department of Defense
U.S. Department of Energy
U.S. Department of Homeland Security
U.S. Department of the Interior
U.S. Department of Transportation
U.S. Environmental Protection Agency

New England Fisheries Management Council (NEFMC) Member

Membership of a NEFMC representative on the NE RPB provides a formal mechanism to incorporate fishery-related issues into the NE RPB's considerations and is appropriate in light of the NEFMC's unique statutory responsibilities under the Magnuson-Stevens Fishery Conservation and Management Act. The NEFMC member will have specific knowledge of fishery marine resources and management in New England waters. Officials identified by the NEFMC to serve as RPB members shall do so in their capacity as federal, state, tribal, or local government officials.

Ex-Officio Members

Given that activities happen outside the planning area of this initiative, ex-officio membership is extended by letter of invitation to a representative from the State of New York. It is desirable that this member also sit on the Mid-Atlantic Regional Planning Body to help integrate and enhance consistency between regional ocean planning efforts. The RPB recognizes that Northeast states share maritime boundaries with Canada, and ex-officio membership is extended by letter of invitation to a Federal Canadian representative. The NE RPB also reserves the right to extend ex-officio status to an additional U.S. based tribe. The role of ex-officio members is to participate in discussions, share perspectives, and offer expertise while being observers when the RPB decides more formally to seek consensus on an issue.

Local Government Participation

The NE RPB will provide mechanisms for meaningful local input into the regional ocean planning process through its state NE RPB members. State members will work with existing local entities to identify issues and communicate ideas back to the full RPB by establishing new forms of two-way communication or using existing consultative bodies that include but are not limited to local authorities (e.g., Massachusetts Ocean Advisory Commission, Maine Municipal

Association, regional planning agencies, etc.). This approach recognizes that mechanisms for participation may evolve through time as local entities are further engaged in the regional ocean planning effort.

NE RPB Member Commitments

By signing this charter, members agree to participate in the Northeast regional ocean planning process to the extent practicable and consistent with their existing authorities. The purpose of this charter is to formalize federal, state, tribal, and NEFMC commitments to the principles of regional ocean planning and their willingness to work constructively and cooperatively toward their identified regional goals and objectives. Specifically, members (on behalf of the entity they represent) will commit in good faith to:

- Fulfill the role of representing their agency, Governors, or tribe on the RPB
- Participate in and attend NE RPB meetings
- Build a cooperative, open, and transparent process
- Agree on a process, timeline, goals, and work plan
- Incorporate the National Ocean Policy goals, principles, and objectives into the planning process where appropriate
- Consider providing additional support (e.g., technical assistance, data, and information) to ensure NE RPB functions can be fulfilled

This charter reflects an agreement for planning and coordination purposes without binding members to final outcomes. Members agree that the commitments contained in this charter will not be enforceable and do not create financial or legal obligations or affect existing rights or create new private causes of action beyond those created by existing statute or regulation. Recognizing the limited availability of new resources, federal agencies engaged in the development and implementation of regional ocean planning will evaluate how resources are allocated in light of their respective statutory and regulatory mandates and ensure that their priorities align with this regional initiative.

Roles of the Co-leads and Executive Secretariat

The NE RPB has one federal, state, and tribal co-lead. The NOC selected the Northeast Federal co-lead as a representative from the National Oceanic and Atmospheric Administration. State

and tribal RPB members will select their respective co-leads. Along with an Executive Secretary, the three co-leads form the Executive Secretariat.

Co-leadership will be rotational and based on a two year term (with no limits on consecutive terms), at which point co-leads could be re-elected or replaced. The state and tribal co-leads have no financial obligation to support the operations of the RPB. NOAA, as the current federal co-lead, is providing basic resources needed to administer the process.

In consultation with NE RPB members, co-leads may consider and decide how to fulfill the following roles and responsibilities:

- Facilitate and guide the planning process.
- Perform Executive Secretariat functions for the RPB (e.g., prepare and review meeting materials, co-lead NE RPB meetings, communicate with the NOC, and perform other administrative duties, as appropriate and necessary).
- Coordinate review of existing regional ocean governance structures and regulatory and planning authorities to the maximum extent practicable.
- Provide initial review of NE RPB products and get their government sector's input and feedback.
- Coordinate with NE RPB members to establish working groups as needed and comprised of members, or their designated representatives, and other experts as necessary.
- Promote collaboration among NE RPB members by seeking consensus.
- Seek to resolve NE RPB disputes that arise during the planning process.

Relationship to Existing Authorities

The NE RPB is not a regulatory body and has no independent legal authority to regulate or otherwise direct federal, state, or tribal entities. Agencies involved in this effort administer a range of statutes and authorized programs that provide a basis to implement regional ocean planning. The process and decision-making that the National Ocean Policy envisions for regional ocean planning will be carried out consistent with and under the authority of these existing statutes. While regional ocean planning cannot supersede existing laws and agency authorities, it is intended to provide a better mechanism for application of these existing laws and authorities. If the NE RPB decides to create a formal regional ocean plan, this plan would not be regulatory or necessarily constitute final agency decision-making. Rather, the intent

would be to guide agency decision-making, and agencies would adhere to the final plan to the extent possible, consistent with their existing authorities.

Procedural Elements

Conduct of Business

NE RPB members will meet periodically as necessary at the call of the Executive Secretariat in person, by phone, or other electronic means. The Executive Secretariat shall seek input on meeting agenda topics from its members. The RPB will also establish a procedure for the introduction of determinative issues and work plans by consensus, will regularly report out such findings or progress made at regular meetings, and receive public comment throughout the process.

Decision-making

NE RPB members will make a number of decisions throughout the planning process. With the help of co-leads and facilitators, decisions will be made by consensus - not by vote of RPB members. General concurrence is consensus, but unanimous concurrence is not required. General concurrence is the absence of express disagreement by a member on a particular issue. A member may register his or her concern with a co-lead about a proposed course of action either orally or in writing without preventing consensus from being reached.

Dispute Resolution

For purposes of RPB decision-making, a dispute is defined as the inability of the members to reach consensus as described above. Express disagreement by a single member on a particular issue which prevents general concurrence is sufficient to constitute a dispute. In instances in which consensus on a particular matter cannot be achieved, the RPB co-leads will work to resolve differences at the regional level and within the RPB. If disputes cannot be resolved within the RPB, then NOC guidance is available for consultation and the NOC can assist when necessary and desired by RPB co-leads.

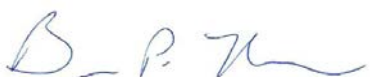

Administrative Provisions

1. This charter shall take effect on the date of the last approving signature.
2. A change in membership does not require execution of a new charter. New members who join the Regional Planning Body after execution of this charter will be asked to sign.

3. A non-federal member may withdraw from this charter by providing written notice to the RPB co-leads. Withdrawal from this charter by a federal member requires notice to the federal co-lead, and subsequent concurrence by the NOC.
 4. Members may modify this charter by developing and agreeing to a written amendment.
